PREFACE.

THE Indian Molluscan Fauna has for a great number of years attracted the attention of many collectors and zoologists, foremost among whom may be mentioned the following: Benson, Pfeiffer, Stoliczka, Nevill, Theobald, Hanley, the two Blanford brothers, Beddome—unfortunately none of these any longer with us—and Lt.-Col. Godwin-Austen. The last named has an intimate and extensive knowledge of the Indian Mollusca, both conchological and anatomical, equalled by no man living. Of the total number of 572 species of land operculates known from India, Ceylon, and Burma, no fewer than 170 have been named and described by him, the next highest number—85—standing to the credit of Benson, while W. H. Blanford is responsible for 64, Pfeiffer following with 42, and Beddome with 25. In the largest genus—*Alyceus*, containing 145 known Indian species—Godwin-Austen is credited with as many as 102.

The classification adopted in the present volume is mainly that proposed by Kobelt in "Das Tierreich," Lief. 16.

In the marine operculates breathing is effected by means of one or two branchiæ. The terrestrial forms, however, having adopted an aerial mode of life and consequently breathing air instead of water, their respiration is carried on, as in the Pulmonata, by a lung formed from the mantle-cavity. In some genera, where the shell is completely closed by the operculum, a tube has been developed on the last whorl, near the aperture, for the purpose of admitting air into the shell. Such are: *Alyceus*, *Pterocyclus*, *Opisthoporus*, *Spiraculum*, and *Rhiostoma*. In the last genus the anterior

part of the last whorl has become detached, and the tube, which is quite free, is directed towards the penultimate whorl.

As regards the circulatory system, the Indian land operculates are provided with only one auricle, and the pulmonary veins, as well as the auricle—into which they open,—are situated in front of the ventricle.

In their nervous system these families, like other Streptoneura, are characterized by the loop formed by the two visceral nerve cords being twisted over itself in the form of the figure ∞ . They also differ widely from the Pulmonata in their digestive and other organs.

In the preparation of this volume the writer has had the advantage of the co-operation of Mr. Hugh Watson, who has kindly read through all the proofs, in the course of which he has made many valuable suggestions. To Mr. G. C. Robson, as on a former occasion, I am indebted for giving me free access to the general collection in the British Museum at South Kensington. Mr. G. C. Leman also has obligingly placed several specimens from the late Col. Beddome's collection—now in his possession—at my disposal, while to Dr. F. Haas, of the Senckenbergisches Museum, Frankfurt a/M., I am under obligation for procuring me photographs of the types of two species in the Möllendorff Collection.

London, *February*, 1921.

G. K. GUDE.

Family CYCLOPHORIDÆ.

Subfamily CYCLOPHORINÆ.

Genus **LEPTOPOMA**, Pfeiffer.

Leptopoma, Pfeiffer, Zeits. Malak. iv, 1847, p. 108; id., Mon. Pneum 1852, p. 101, Adams, Genera Recent Moll. ii, 1855, p. 281, Chenu, Man. Conchyl. i, 1860, p. 487, Pfeiffer, Mon. Pneum Suppl. 3, 1875, p. 127, Fischer, Man. Conchyl. 1885, p. 743, Sarasin, Land-Moll. Celebes, 1899, p. 15, Kobelt, Das Tierreich, Lief. 16, 1902, p. 4.

TYPE, *Cyclostoma vitrea*, Lesson.

Range. Southern Asia, Malaysia, Philippines, New Guinea, Melanesia.

Shell narrowly umbilicated, globose-turbinate or conical, thin, often translucent. Peristome simple—occasionally double—generally reflexed, sometimes straight, usually interrupted on the penultimate whorl, but sometimes connected by a thin callus. Operculum membranaceous, closely whorled, flat.

Subgenus **LEPTOPOMA**, Pfeiffer (s. s.).

Leptopoma (as subgenus), Kobelt, Das Tierreich, Lief. 16, 1902, p. 4.

TYPE, *Cyclostoma vitrea*, Lesson.

Range. Ceylon, Malaysia, Formosa, New Guinea, Melanesia.

Shell conical or globose-turbinate, thin, generally with brown bands on a white ground.

Only two species are known from Ceylon, none from the Indian Peninsula.

1 *Leptopoma semiclausum*, Pfeiffer.

Cyclostoma semiclausum (*Leptopoma*), Pfeiffer, P. Z. S. 1854, p. 302.
Leptopoma semiclausum, Pfeiffer, Mon. Pneum Suppl. 1, 1858, p. 70, Reeve, Conch. Icon. xiii, 1862, *Leptopoma*, pl. 6, fig. 36, Hawley & Theobald, Conch. Ind. 1870, pl. 6, fig. 2, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 5; Theobald, Cat. Shells Brit. India, 1876, p. 37, Nevill, Hand. List, i, 1878, p. 281, Sykes, Journ. Malac. vii, 1899, p. 26, Kobelt, Conch.-Cab., Cyclophoridae, i, 1902, p. 446, pl. 55, fig. 9.
Leptopoma (*Leptopoma*) *semiclausum*, Kobelt & Möllendorff, Nachr. Deuts. Malak. Ges. 1897, p. 79, id., Cat. Pneum. 1899, p. 7, Kobelt, Das Tierreich, Lief. 16, 1902, p. 14.

Original description —“C. testa perforata, globoso-turbinata, tenuiuscula, striae obliquae et spiralibus minute decussatae, albida,

flammis latis angulosis fusco-viridibus et fascis inframedianis nonnullis saturatioribus picta, spira elata, turbinata, acutiuscula, anfr. 5 convexis, rapide accrescentibus; apertura obliqua, fere circulari, perist. duplici interno expansiusculo, incumbente, externo rectangule patente, ad perforationem reflexo, eam fere claudente — Operc. virenti-fulvum

"Diam. maj. 13, min. 10, alt. 10 mill." (Pfeiffer.)

Hab. Ceylon (*Thwaites, H. Nevill*)

2 *Leptopoma taprobanensis*, Preston.

Leptopoma taprobanensis, Preston, Rec. Ind. Mus. iii, 1909, p. 137, pl. 22, fig. 4.

Original description :—"Shell pyramidal, white, painted with broad reddish brown flame markings, whorls $4\frac{1}{2}$, convex, the apical whorls uniformly reddish brown, smooth, the remainder sculptured throughout with spiral liræ; sutures deeply impressed, base of shell convex, umbilicus moderately broad; peristome continuous, single, reflexed, white, aperture circular.

"Alt. 6.5; diam. major 6.25; aperture alt. 2.5, diam. 2.5 mm" (Preston.)

Hab. Ceylon.

Subgenus *TROCHOLEPTOPOMA*, Kobelt & Mollendorff

Trocholeptopoma, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 80; id., Cat. Pneum. 1899, p. 8, Kobelt, Das Tierreich, Lief. 16, 1902, p. 17.

TYPE, *Cyclostoma helicoides*, Grateloup

Range. Burma, Andamans, Ceylon, Farther India, Malaysia, New Guinea.

Shell more or less trochoid-turbinate, generally with distinct spiral sculpture, frequently variegated; last whorl compressed, angulated, or keeled.

3 *Leptopoma apicatum*, Benson

Leptopoma apicatum, Benson, A. M. N. H. ser. 2, xviii, 1856, p. 95; Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 73, Reeve, Conch. Icon. xiii, 1862, *Leptopoma*, pl. 6, fig. 33, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 5, Hanley & Theobald, Conch. Ind. 1876, pl. 142, fig. 1, Theobald, Cat. Shells Brit. India, 1878, p. 37; Nevill, Hand List, i, 1878, p. 281, Sykes, Journ. Malac. vii, 1899, p. 27.

Leptopoma (Trocholeptopoma) apicatum, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 80; id., Cat. Pneum. 1899, p. 8, Kobelt, Das Tierreich, Lief. 16, 1902, p. 18, id., Conch.-Cab. Cyclophoridae, i, 1902, p. 446, pl. 55, fig. 10.

Original description :—"Testa subobtectè perforata, globosocomica, tenui, oblique striatula, sub lente spiralter coniertim striata, albida, interdum flammulis et fascia unica infra peri-

phæriam angulatam ornata, sutura profunda; spira conica, apice saturate castaneo-nigrescente, acutiusculo; anfractibus $4\frac{1}{2}$ convexiusculis, ultimo ad periphæriam obtuse angulato, apertura obliqua, rotundata, peristomate duplici, interiori expansiusculo marginibus callo junctis, exteriori breviter expanso; margine columellari reflexo perforationem fere occultante.

"Diam. major $10\frac{1}{2}$, min 9, axis 9 mill."

Hab Ceylon (*E. Layard, H. Nevill*).

"This *Leptopoma* may be distinguished from any of the varieties of *L. vitreum* by its angular periphery, dark apex, more convex whorls, deeper suture, double peristome and parietal callus, as well as by the reflexion of the columellar lip over the perforation, and of the narrow lip above it. It is deficient also in the angular projection observable on the lower part of the same lip in that species." (*Benson*)

4 *Leptopoma aspirans*, *Benson*

Leptopoma aspuana, Benson, A. M. N. H. ser. 2, xvii, 1856, p. 229; Theobald, J. A. S. B. xxvi, 1857, p. 247; Pfeiffer, Mon. Pneum Suppl 1, 1858, p. 72, Reeve, Conch Icon xui, 1862, *Leptopoma*, pl. 4, fig. 18, Blanford, J. A. S. B. xxxi, 1862, p. 144, xxxiv, 1865, p. 97, Hanley & Theobald, Conch. Ind 1870, pl. 6, fig. 4, Theobald, Cat Shells Brit. India, 1876, p. 37; Nevill, Hand List, i, 1878, p. 280*, var *major*, Mollendorff, J. A. S. B. lv, 1886, p. 309; id., P. Z. S. 1891, p. 341.

Leptopoma (Trocholeptopoma) aspuana, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 80, id., Cat Pneum 1899, p. 8, Kobelt, Das Tierreich, Lief. 16, 1902, p. 19, id., Conch.-Cab., Cyclophoridae, i, 1906, p. 465, pl. 57, figs. 17, 18

Original description :—"Testa perforata, globoso-conica, acuminata, tenui, translucente, oblique et spiraliter exilissime striata, lineis elevatis 6 spiralibus, æquidistantibus, superne munita, albido-cornea, fasciis fuscis vel strigis angulatis castaneis ornata; spira acuminato-conica, sutura impressa, apice acutiusculo; anfractibus $5\frac{1}{2}$ convexis, ultimo ad periphæriam carinato, subtus læviori, apertura obliqua, subcirculari, peristomate tenui, horizontaliter breviter patente, marginibus callo tenui junctis, columellari leviter emarginato, operculo ut in genere.

"Diam. major 11, minor 9, alt 12 mill., apert. $6\frac{1}{2}$ mill. longa."

Hab. Burma Tenasserim Valley (*Theobald*), Tongoop, Arakan (*Ingram*), Arakan Hills (*Blanford, Kurz*), Bassein, Pegu; Long Island, Bassein River (*Blanford*). India Khasi Hills, Assam (*Godwin-Austen*). Perak Bukit Pondong (*Townsend, Hungerford*).

"In form it most nearly approaches *L. vitreum*, Qu., but has a more acuminate spire. Its sculpture has greater resemblance to that of the more globose and depressed Bornean species, *L. serratum*, Pfr. The smaller specimens have a more conical and trochiform appearance than the larger ones." (*Benson*)

5. *Leptopoma elatum*, Pfeiffer.

- Leptopoma elatum*, Pfeiffer, Zeits. Malak. viii, 1851, p. 146 (nom nud); id., Cat. Phaneropn Brit. Mus. 1852, p. 82, id., Mon. Pneum. 1852, p. 117, Adams, Gen. Rec. Moll. ii, 1855, p. 281; Reeve, Conch. Icon. xiii, 1862, *Leptopoma*, pl. 1, fig. 3, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 5, Hanley & Theobald, Conch. Dermatocera maculosa, Adams, Gen. Rec. Moll. ii, 1855, p. 282; Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 78.

Cyclostoma azatlanum, Jay, Cat. Shells, Ed. 4, 1850, p. 254.

"T perforata, globoso-conica, tenuis, concentricè confertissime lineata, diaphana, albida, sæpe castaneo punctata et strigato-maculata, spirâ conica, acuta, anfr. $5\frac{1}{2}$ convexi, ultimus superne carinis nonnullis obsoletis, ad peripheriam carina 1 validiore munitis, basi convexus; apertura vix obliqua, subcircularis; perist. tenue, undique late expansum, marginibus disjunctis, columellari medio dilatato umbilicem angustissimum, haud pervium non occultante.—Operc. normale.—Diam. maj. 17, min. 14, alt. 12 mill. Ap. intus 9 mill. longa." (Pfeiffer.)

Hab. Kachal, Nicobars. Philippines.

7. *Leptopoma roepstorffianum*, Nevill.

Leptopoma roepstorffianum, Nevill, Hand List, i, 1873, p. 280; Godwin-Austen, P. Z. S. 1875, p. 452.

Leptopoma (Trocholeptopoma) roepstorffianum, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 81, id., Cat. Pneum. 1899, p. 9, Kobelt, Das Tierreich, Lief. 16, 1902, p. 29.

Original description—"Like *L. aspirans*, but more globose and swollen; apparently smooth and polished, but under the lens

Fig 1—*Leptopoma roepstorffianum* ($\times 2$)

closely spirally somewhat absolutely [?obsoletely] striated; umbilicus less open—aperture more effused, margin at base sub-angulate, not rounded, either uniformly white or beautifully marked—"zebra-like." (Nevill.)

Hab. Andaman Islands (*de Roepstorff*), Port Blair (*Godwin-Austen*).

In addition to the type Nevill indicates, l. c. p. 281, "*var nuobaria*, Martens," but he gives no description, and I have been unable to trace the name in any of von Martens' articles.

Presumably this form is from the Nicobar group, but Nevill does not state this. Kobelt in 'Das Tierreich' indicates the Nicobars for the species, probably on the strength of the name.

Godwin-Austen (*l. c.*) states that he found in Nevill's MS. copy of the 'Hand List' the varieties *gigantea* and *albida*—no description of either is given—the former from Port Blair and the latter from the same locality as well as from the "Brothers."

The species is now illustrated for the first time from a specimen in the British Museum.

Genus JAPONIA, Gould.

Japonia, Gould, Proc. Boston Soc Nat Hist vi, 1859, p. 426
Kobelt, Das Tierreich, Lief 16, 1902, p. 34.

TYPE, (1st species) *Cyclostoma barbata*, Gould (non *C. barbatum*, Pfeiffer).

Range. South China, Japan, Southern Asia, Malaysia, Philippines, New Guinea, New Hebrides, Fiji Islands, New Zealand.

Shell small, narrowly umbilicated, turbate, spirally striated, covered with a brownish periostracum, in young specimens frequently hairy, peristome thickened, provided at the suture with a more or less distinct notch. Operculum flat, thin, many-whorled. Animal similar to that of *Cyclophorus*, but the foot furnished with a slime-pore above. Radula as in *Cyclophorus*.

Subgenus LAGOCHILUS, Blanford (em.).

Lagocheilus, Blanford, A. M. N. H. ser 3, xiii, 1864, p. 452
Lagochilus, s. str., Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 82; id., Cat. Pneum. 1899, p. 10 (as subgenus of *Lagochilus*), Kobelt, Das Tierreich, Lief 16, 1902, p. 35 (as subgenus of *Japonia*).

TYPE, *Cyclophorus scissumargo*, Benson.

Range. From India to the Philippines.

Original description — "Testa anguste umbilicata, turbinato-conica, parva, spiraliter lirata, epidermide fusca (in exemplis junioribus sæpe hispidula) induta. Peristoma incrassatum, superne ad angulam rima transverse breviter incisum. Operculum planum, tenue, albidum."

8. *Japonia binoyæ*, Sykes.

Cyclophorus binoyæ, Sykes, Journ. Malac. vii, 1899, p. 29, pl. 2, fig. 4
Japonia (Lagochilus) binoyæ, Kobelt, Das Tierreich, Lief 16, 1902, p. 37, id., Conch.-Cab., Cyclophoridae, i, 1907, p. 526, pl. 66, fig. 3.

Original description — "Closely related to *C. vesicus*, but the spiral striation is very much finer, the lines being more numerous and closely set, the periostracum much stronger, being almost scabrous; the shell is also more closely coiled, a specimen of $4\frac{1}{2}$ whorls measuring only: alt. 3, diam. 5 mm" (*Sykes*)

Hab. Ceylon Binoya, Ambagamuwa (*Collett*).

9. *Japonia daflaensis*, *Godwin-Austen*.

Lagocheilus daflaensis, Godwin-Austen, Rec. Ind. Mus. viii, 1918, p. 575, text-fig. 3 C.

Original description.—"Shell elongately conoid, umbilicated; sculpture about ten fine liræ, regularly disposed, crossed by fine epidermal striæ of growth, colour dark brown; spire, sides nearly flat, apex fine; suture moderately impressed; whorls 6, sides rounded, evenly increasing; aperture circular, obtusely angulated above; peristome double, continuous, sinuate on outer margin, with small nick at the suture.

"Size (largest) major diameter 5.2, alt. axis 4.0 mm."

Hab. India: Toruputu, Dafla Hills (*Godwin-Austen*)

10. *Japonia galatheæ*, *Morch*.

Cyclophorus (Craspedotopsis) galatheæ, Morch, Journ. Conchyl. xx, 1872, p. 315; id, Vid. Meddel. ser. 3, iv, 1872, p. 22, id., Journ. Conchyl. xxiv, 1876, p. 361.

Leptopoma (err. typ.) *galatheæ*, Pfeiffer, Malak. Blätt. xxiv, 1877, p. 148.

Leptopoma ? *galatheæ* (*Cyclophorus*), Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 128.

Lagocheilus galatheæ + var. *minor*, Nevill, Hand. List, 1, 1878, p. 283, Godwin-Austen, P. Z. S. 1895, p. 444.

Lagocheilus (Lagocheilus) galatheæ, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1877, p. 83, id., Cat. Pneum. 1899, p. 11.

Japonia (Lagocheilus) galatheæ, Kobelt, Das Tierreich, Lief. 16, 1902, p. 43.

Original description.—"T. depresso-conica, perforato-umbilicata; anfr. 5½ convexiusculi, sutura sat profunda, lineis acutis spiralis in anfr. penult. circ. 10-12, in ultimo circiter 20, umbilicum versus distantioribus et obsoletioribus; fascis brunneis obliquis subsigmoideis, suturam versus latioribus, umbilicum versus intrantibus. Striæ incrementi, parum prominentes. Apertura diagonalis, circularis, intus cœrulescens, peristomate breviter expanso, duplici, interno albo, externo fusco, callo parietali ad insertionem marginis superioris exciso.

"Diam. maj. 6 mill.; axis 4 mill.; alt. max. 6½ mill.; ap. diam. 3 mill." (*Morch*)

Hab. Nicobars: Borders of Galathea River (*Reinhardt*); Teresa, Katchal, Kamorta (*Roepstorff*); Nicobars (*Stoliczka*.)

Morch records a var. *minor*, measuring only 5 mm. in diameter, from Katchal.

J. galatheæ is allied to *J. roepstorffi*, but the latter has more distant, ciliated spiral liræ, is more depressed, and has a wider umbilicus.

The species has never been illustrated, and I have been unable to find specimens in any collection to which I have had access.

11. *Japonia leporina*, *Blanford*.

Cyclophorus (Lagocheilus) leporinus, Blanford, J. A. S. B. xxxiv, 1865, p. 82

Cyclophorus leporinus, Pfeiffer, Mon. Pneum Suppl. 3, 1876, p. 123.

Lagocheilus leporinus, Stoliczka, J. A. S. B. xli, part 2, 1872, p. 269,

Hanley & Theobald, Conch. Ind. 1875, p. 54, pl. 135, fig. 2,

i, 1878, p. 282, Crosse, Journ. Conchyl. xxvii, 1879, p. 203

Lagocheilus (Lagocheilus) leporinus, Kobelt & Mollendorff, Nachr.

Deuts. Malak. Ges. xxix, 1897, p. 83, id., Cat. Pneum. 1899, p. 11

Japonia (Lagocheilus) leporina, Kobelt, Das Tierreich, Lief. 16,

1902, p. 47; id., Conch.-Cab., Cyclophoridae, i, 1907, p. 530, pl. 66,
fig. 12

Original description —“Shell narrowly umbilicated, conically turbinate, thin, dark horny, and ornamented throughout with oblique striae and with raised spiral lines, closer together at the periphery and within the umbilicus than elsewhere. Spire conical, apex rather acute. Whorls $5\frac{1}{2}$, rounded; the last cylindrical, not descending. Aperture oblique, subcircular, angulate above, peristome simple, thickened, subexpanded, incised at the upper angle, columellar margin curved backwards. Operculum horny, greyish white, multispiral.

“Major diameter $4\frac{1}{2}$ mill., minor $3\frac{1}{2}$ mill., axis 4 mill.”

Hab. Burma: Akoutong, Pegu (*Blanford*); Thyat Myo (*Hungerford*)

“This form is allied to *Cyclophorus scissimargo*, Bens., and *O. tomotrema*, Bens. The present species is smaller and higher in the spire than either of the others. The animal of *O. leporinus* is short, dark in colour, with small black tentacles, and resembles ordinary *Cyclophorus* in most characters. The only specimen obtained living and examined, possessed, however, the peculiarity of a groove down the middle of the caudal portion of the foot above.

“The peristome is simple in the only perfect adult specimen which I possess, but in a broken barely adult shell, there is a rudimentary duplication. The two lips are probably united in the full grown shell.” (*Blanford*.)

12. *Japonia malleata*, *Blanford*.

Cyclophorus malleatus, W. T. & H. F. Blanford, J. A. S. B. xxx, 1861, p. 349, pl. 1, fig. 6, p. 364, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 71.

† *Cyathopoma malleatum*, Hanley & Theobald, Conch. Ind. 1874,

p. 35, pl. 82, figs. 5, 6

Leptopoma malleatum, Theobald, Cat. Shells Brit. India, 1876, p. 37

Cyclophorus (Leptopomoides) malleatus, Nevill, Hand List, i, 1878,
p. 274

Lagocheilus (Lagocheilus) malleatum, Kobelt & Mollendorff, Nachr.

Deuts. Malak. Ges. xxix, 1897, p. 83, id., Cat. Pneum. 1899, p. 11

Japonia (Lagocheilus) malleata, Kobelt, Das Tierreich, Lief. 16,
1902, p. 48.

Original description —“Testa anguste umbilicata, trochiformis, oblique striata, lineis spiraliibus supra et infra cincta, solidiuscula, epidermide fusca induta, sub epidermide albidā; spira conica, apice acuta, sutura impressa. Anfr. 5 convexi; ultimus rotundatus in veteribus exemplis descendens et fere solutus. Apertura parum obliqua, circularis, superne subangulata; perist. rectum, simplex, breviter adnatum, margine columellari recedente, dextro supra antice porrecto. Opere?”

“Diam maj $6\frac{1}{2}$, min. $5\frac{1}{2}$, axis $6\frac{1}{2}$, ap. diam 3 mm” (Blanford.)

Hab. India. Shevroy Hills (King, Stoliczka); Nilgiris (Blanford), Kalryenmulles (Foote).

“This appears to be a representative of the Cingalese group, comprising *Cyclophorus halophilus*, Bens., *C. orophilus*, Bens., *C. flammeus*, Pfr., &c. It differs from all except *C. orophilus* and *C. conulus* in being spirally hrate, and from these two in several characters of spire, aperture, epidermis, &c.

“Some specimens of the same or of a closely allied species were found by one of us in Neddiwuttom Ghat on the Nilgiris. They were, however, much smaller, the largest specimen procured only measuring in its two diameters, $4\frac{1}{2}$ and 4 mm, axis $4\frac{1}{2}$. A specimen of the same small form also occurs in Mr. Foote's collection from the Kalryenmulles” (Blanford)

13. *Japonia oakesi*, Godwin-Austen

Lagoocheilus oakesi, Godwin-Austen, Rec Ind Mus. viii, 1918, p 574, text-fig. 3 A

Original description.—“Shell turbinate, rather flattened on base, rather openly umbilicated, sculpture very fine close liration, crossed with oblique lines of growth, colour umber-brown, with a greenish tint, grey inside the aperture; spire high, conic, apex fine, suture impressed; whorls $5\frac{1}{2}$, rounded, the last rather flattened on the periphery, aperture ovate, obtusely angulate above, oblique; peristome double, continuous, columella margin rather flat above, then suboblique, subangulate in outline.

“Size major diameter 4.75, alt. axis 4 mm.” (Godwin-Austen.)

Hab. India: Abor Hills (Oakes).

A small variety is figured on the same page as the type (text-fig. 3 B). It measures: major diam 4, alt. axis 3.5 mm., has the last whorl more rounded, and not quite so widely umbilicated.

14. *Japonia occulta*, Sykes

Lagoocheilus occultus, Sykes, Journ Malac vii, 1899, p 28, pl 2, fig. 6
Japonia (Lagoocheilus) occulta, Kobelt, Das Tierreich, Lief 16, 1902, p 49; id, Conch.-Cab., Cyclophoridae, 1907, p 518, pl 65, fig 1.

Original description :—“Testa mediocriter et perspective umbilicata, elate turbinata, tenuiuscula. brunneo-cornea, spira bene elevata, anfr $4\frac{1}{2}$ –5 convexi, sutura profunde impressa, periostraco bene induti, lineis spiraliibus (ultimus sex approx.) et transversis, et setis sparsim notati, basi usque in umbilicum leviter hcati,

apertura subcircularis, peristomate leviter incrassato, superne leviter exciso. Alt. 2.5, diam. 4 mm." (*Sykes*.)

Hab. Ceylon. *Ambegamua* (*Collett*).

"The first species of the genus recorded from Ceylon. The shell is clothed with a dense periostracum, which forms transverse and spiral lines, the latter having a few hairs scattered along them. The notch is small but distinct."

Japonia (Lagocheilus) wullerstorffiana, Kobelt, Das Tierreich, Lief. 16, 1902, p. 59.

Fig. 5—*Japonia wullerstorffiana* ($\times 2$)

Original description :—"T. anguste umbilicata, turbinata, tenuiscula, striatula, superne liris 5, subtus 4 filiformibus cincta, luteo

et castaneo flammulata, spira turbinata, vertice acuto; anfr. $5\frac{1}{2}$ convexusculi, ultimus fascia lutea infra hram periphericam ornatus, basi parum convexus, apertura parum obliqua, subcircularis, perist. simplex, anguste expansum, marginibus approximatis, callo junctis Operc ?—Diam maj 7, min. 6, alt $5\frac{1}{2}$ mm." (*Zelebor*)

Hab Nicobar Islands (*Novara Exped.*).

The species has not hitherto been illustrated, and I am pleased to be able to give 3 views of a specimen in the British Museum.

Genus **CRASPEDOTROPIS**, *Blanford.*

Craspedotropis, Blanford, A. M. N. H. ser 3, xiii, 1864, p. 454 (as sub-genus of *Cyclophorus*), Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 71 (? genus), Nevill, Hand List, i, 1878, p. 278, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 86 (as genus), id, Cat. Pneum. 1899, p. 14, Kobelt, Das Tierreich, Lief. 16, 1902, p. 68.

Type, *Cyclophorus cuspidatus*, Benson.

Range. India.

Shell acuminate conoid, carinated, with a thick fuscous periostracum, the keel fimbriated. Operculum closely wound.

24. *Craspedotropis bilirata*, *Beddome.*

Cyclophorus biliratus, Beddome, P. Z. S. 1875, p. 452, pl. 53, fig. 34; Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 408

? *Craspedotropis biliratus*, Theobald, Cat. Shells Brit. India, 1876, Addenda, p. 11.

Cyclophorus (*Craspedotropis*) *biliratus*, Nevill, Hand List, i, 1878, p. 278

Ditropis biliratus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 86, id, Cat. Pneum. 1899, p. 14

Ditropis (*Ditropis*) *biliratus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 73.

Original description —“Shell umbilicated, turbinate, furnished with a thick dark epidermis, which is soon obsolete on the fourth or fifth upper whorl, but always present on the lowest one, where it forms an oblique, coarse, hair-like striation most prominent round the periphery and at the suture of the two lower whorls, and generally round the umbilicus, where it forms quite a fringe, colour below the epidermis dull olive; spire conical, apex subacute, whorls 6, the five upper ones smooth, convex, or sometimes the fifth (or fourth and fifth) with a slight rib round the centre, lowest whorl with two prominent raised ribs round the periphery, with a broad flat space between them, below convex, smooth or with several raised striæ, the whorl descending slightly near the mouth, aperture oblique, subcircular, slightly angled at the termination of the ribs at the peristome, umbilicus more or less situated within, peristome single, thin, continuous, or slightly interrupted on the penultimate; operculum of a single layer, thin,

horny, multispiral, concave externally, nucleus small, central height of shell $\frac{3}{8}$ inch [5 mm.], slightly more than the breadth of the lowest whorl."

Hab. India. South Canara range of Ghats, 2500 feet elevation (Beddome), Wynaad? (Beddome).

Fig. 8.—*Craspedotropis bilirata*. ($\times 3$)

"This shell is closely allied to *Cyclophorus cuspidatus*, Bens. (*Craspedotropis*, Blanf.), it has exactly the same operculum (the two not being in any way distinguishable), which, however, seems scarcely to differ from that of many typical species of *Cyclophorus*, except, perhaps, in being more closely wound, certainly not enough to constitute a subgenus." (Beddome)

Nevill mentions* another *Cyclophorus biliratus*, Beddome, under the subgenus *Leptopomoides* from the Wynaad, but it is uncertain whether this is the same as the Canara form.

The specimen figured is from the Beddome collection, and measures 3.5 mm. in diameter, alt. 4 mm. In describing the species Col. Beddome stated it was allied to *Cyclophorus cuspidatus*. Nevill referred it to *Craspedotropis*, but Kobelt and Mollendorff placed it in *Ditropis*. Its affinities appear to me to warrant its inclusion in the former rather than in the latter genus.

25. *Craspedotropis cuspidata*, Benson.

Cyclostoma cuspidatum, Benson, A. M. N. H. ser. 2, viii, 1851, p. 189, Pfeiffer, Mon. Pneum. 1852, p. 313, id., Cat. Phaneropn Brit. Mus. 1852, p. 223; id., Conch.-Cab., *Cyclostoma*, 1854, p. 378, pl. 49, figs. 21-23.

Original description — "Testa umbilicata, acuminato-conoidea, oblique striata, lineis spiralibus circumdata, epidermide olivaceo-

* Hand List, 1, 1878, p. 274.

fusca; spira elongata, attenuata, apice mamillari, anfractibus 5, primis convexis, ultimo et penultimo superne convexiusculis, lira unica præditis, ultimo subtus convexo, periphæria carinata, carina lamellato-fimbriata, basi 3-lirata, lira subumbilicari fimbriata, apertura perobliqua, subcirculari, superne subangulata, dimidium longitudinis æquante, peristomate tenui, acuto, margine columellari expansiusculo, umbilico medioeri profundo, anfractus plures exhibente

"Diam. major 6, minor 5, alt 4 mill." (Benson.)

Hab India. Nilgiris (Jerdon, Blanford), Ootacamund (Beddome).

Fig 7 — *Craspedotropis cuspidata*. ($\times 3$)

"This species is singular on account of its attenuated spire, and the hirsute lamellar appendages to the keels, at the periphery and umbilicus; but the latter character is apt to be obliterated" (Benson.)

The shell figured is from the Beddome collection and measures 4.5 mm. in diameter, alt. 3.75 mm

26 *Craspedotropis fimbriata*, Godwin-Austen

Craspedotropis fimbriatus, Godwin-Austen, J. A. S. B. xlv, 1875, p. 7, pl. 4, fig. 1. Hanley & Theobald, Couch Ind. 1876, p. xiii, Theobald, Cat. Shells Brit. Ind. 1876, addenda, p. 11, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 86, id., Cat. Pneum. 1899, p. 14, Kobelt, Das Tierreich, Lief. 16, 1902, p. 69.

Cyclophorus (Craspedotropis) fimbriatus, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 406.

Original description — "Shell conoidly turbinate, closely umbilicated, thin, covered with a rough dark brown epidermis, longitudinally striate, a leaf-like fringe adorns the periphery of the last whorl, spire conoid, its side concave, apex attenuate, blunt, suture deep, whorls 5, flat above, aperture diagonal circular, the lip slightly reflected, peristome thin. Operculum multispiral, flat, smooth on the outer surface. Animal not seen.

"Major diam. 0.19 [± 75 mm], alt. 0.15 in. [3.75 mm.]." (Godwin-Austen.)

Hab. India. Thengdan Peak, Naga Hills (Godwin-Austen).

27. *Craspedotropis salemensis*, *Beddome*.

- Cyclophorus salemensis*, Beddome, P Z S. 1875, p. 453, pl 53, fig 35; Pfeiffer, Mon Pneum Suppl. 3, 1876, p 408
Craspedotropis salemensis, Hanley & Theobald, Conch. Ind. 1878, p xiii.
Ditropis salemensis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p 87, id, Cat. Pneum. 1899, p. 15
Ditropis (*Ditropis*) *salemensis*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 77.

Original description.—"Shell moderately umbilicated, turbinate, with the spire rather acuminate, of a dull olive-green, furnished with a dirty dark brown, obliquely striated, thread-like epidermis, which is early deciduous on the upper whorls, but always present on the lowest, and round the umbilicus, where it forms a fringe; whorls 6, the upper five generally smooth, convex, or the fifth more or less bilirate towards its termination; lowest whorl a little descending in front, convex below, furnished with five prominent spiral costulations above the region of the periphery, and four to five below it, which latter are only conspicuous towards the termination of the whorl; umbilicus spirally lirate within; aperture oblique, subcircular, angled at its apex, peristome single, continuous, angled at its apex, and suddenly contracted a little below the apex of its right margin, and slightly angled at the centre of the same margin (at the exit of the lower or most prominent of the costulations round the periphery); operculum as in *C. bilunatus* and *cuspidatus*. length $\frac{7}{8}$ inch [5.5 mm], and the greatest diameter equalling the length." (*Beddome*)

Hab. India. Shevaroy Hills, Salem district (*Beddome*).

The remarks under *C. bilunata* as to its generic position apply to the present species. Col. Beddome considered its affinities to be with *bilirata* and *cuspidata*.

Genus **LEPTOPOMOIDES**, *Nevill*.

- Leptopomoides*, Nevill, Hand List, i, 1878, p. 273 (as subgenus of *Cyclophorus*), Fischer, Man. Conchyl. 1885, p. 744 (as section of *Cyclophorus*, s. s.), Kobelt, Das Tierreich, Lief. 16, 1902, p. 69 (as genus)

Genus DITROPIS, *Blanford*.

Ditropis, Blanford, J. A. S. B. xxxviii, part 2, 1869, p. 126 (as sub-genus of *Cyclophorus*), Hanley & Theobald, Conch Ind 1875, p. xiv (genus), Theobald, Cat Shells Brit India, 1878, p. 37, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 86, id., Cat. Pneum. 1899, p. 14; Kobelt, Das Tierreich, Lief. 16, 1902, p. 72

TYPE, *Cyclophorus planorbis*, Blanford.

Range India, Malaysia, Philippine Islands; New Guinea; Fitzroy Island, Australia, East Africa

“Testa translucens, subvitrea, epidermide olivacea nitida instructa, carinis duabus, vel pluribus, una ad peripheriam, altera subtus ab illa interspatio discreta circumdata. Operculum corneum, arctispirum, duplex, lamina interna membranacea, externa crassiuscula, marginibus anfractuuum liberis, ambabus sulco marginali disjunctis. Animal ignotum.

“Shell translucent, almost vitreous, covered with a smooth olivaceous epidermis, with two or more spiral ribs, one of which is always at the periphery of the last whorl, and a second below, separated by an interval from the other. Operculum horny, closely wound, composed of two laminae, separated by a marginal groove, the inner membranaceous, the outer rather thick, and with the edges of the whorls free. Animal unknown” (*Blanford*)

The lingual ribbon of one species was examined by Blanford

It differs from that of *Cyclophorus* in the form of the lateral teeth, and in their denticulations being shorter and more numerous. In *C. (Ditropis) convexus*, the species examined, the central tooth has 7 denticulations, that in the middle being the largest, all the lateral teeth apparently had 5 denticulations, but it appeared very difficult to count those in the outermost laterals correctly.

36. *Ditropis beddomei*, *Blanford*.

Cyclophorus (Ditropis) beddomei, Blanford, J. A. S. B. xxviii, part 2, 1869, p. 127, pl. 16, fig. 2, Nevill, Hand List, i, 1878, p. 278

Ditropis beddomei, Hanley & Theobald, Conch. Ind. 1875, pl. 136, figs. 8, 9, Theobald, Cat. Shells Brit. India, 1876, p. 37, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxi, 1897, p. 86, id., Cat. Pneum. 1899, p. 14

Ditropis (Ditropis) beddomei, Kobelt, Das Tierreich, Lief. 16, 1902, p. 72

Original description.—"Testa latissime umbilicata, depressa, discoidea, tenuis, olivacea, confertissime striata, parum nitida, spirali-ter costata. Spira plana, sutura valde impressa. Antr. circa 4, (primo in exemplo unico deficienti) convexi, primi fere glabri, penultimus costis 2-3, supra uni, infra in umbilico, juxta suturam ornatus, ultimus antice descendens, teres, juxta suturam et subter peripheriam glaber, 7-costatus, costis 4 superioribus, quarum externa ad peripheriam, 3 basalibus ab superioris intervallo disjunctis. Umbilicus perspectivus. Apertura diagonalis, rotunda, peristoma simplex, rectum, breviter adnatum, nigrescens, intus tenuiter albedo-labiatum. Operculum fusco-corneum, intus convexum, limbo tenuissimo circumdatum, extus concavusculum, marginibus anfractuum parum elevatis

"Diam. maj. 8, min. $6\frac{1}{2}$, axis $2\frac{1}{2}$ millem, ap. diam. intus 2

"Shell very widely umbilicated, depressed, discoidal, thin, olive-coloured, very closely and minutely striated, less polished than the other species, and covered with spiral ribbing. The spine is flat, or nearly so, but the innermost whorls being deficient in the only specimen sent for description by Major Beddome, it is impossible to say whether the apex is slightly exerted or not. The suture is much impressed. Whorls about 4 in number, convex, the last one descending near the mouth, smooth near the suture, both above and below, with 7 spiral ribs, 4 above, the outermost forming the periphery of the shell, and 3 below, separated from the others by a smooth space, 3 of the upper and 1 of the lower can be traced on the penultimate whorl near the suture, but become obsolete on the inner whorls. The umbilicus exposes all the whorls below. Aperture diagonal, round, peristome only joined for a very short distance to the penultimate whorl, thickened, all in one plane and not expanded, faintly edged with white inside, blackish externally.

"The operculum differs from that of *Cyclophorus planorbis* by the edges of the whorls being less produced externally, and by its

being in consequence less concave Major diameter 0.31 inch, minor 0.27, axis 0.9. (*Blanford.*)

Hab. India. Travancore (*Beddome*).

37. *Ditropis convexa*, *Blanford.*

Cyclophorus (Ditropis) convexus, *Blanford*, J. A. S. B. xxxviii, part 2, 1869, p. 128, pl. 16, fig. 3 (shell), p. 131, fig. 2 (lingual dentition); *Nevill*, Hand List, 1, 1878, p. 278.

Ditropis convexus, *Hanley & Theobald*, *Conch Ind* 1875, pl. 136, figs 7, 10, *Theobald*, *Cat. Shells Brit. India*, 1876, p. 37.

Ditropis convexa, *Kobelt & Mollendorff*, *Nachr. Deuts. Malak. Ges.* xxi, 1897, p. 86, id., *Cat. Pneum* 1899, p. 37.

Ditropis (Ditropis) convexa, *Kobelt*, *Das Tierreich*, Lief 16, 1902, p. 74.

Original description —“*Testa aperte umbilicata, depresso-convexa, tenuis, nitida, vitrea, glabra, olivacea, minutissime et obsolete decussato-striatula. Spira convexa, apice obtuso; sutura impressa, intus marginata. Antr. 4, convexi, ultimus versus aperturam paulum descendens, teres, juxta suturam fascia lata fusca pictus, extus pallidior, carina una valida ad peripheriam, altera ad basin circumdatus, umbilico perspectivo, omnes anfractus exhibens, confertim spiraliter lirate. Apertura obliqua rotunda, peristoma rectum simplex, incrassatum atque continuum. Operculum fusco-corneum, per-simile illi Cyclophori planorbis, marginibus externis anfractuum laciniatum productis.*”

“*Diam. maj* $6\frac{1}{2}$, *min.* $5\frac{1}{2}$, *axis* $3\frac{1}{2}$ millem. *Ap. diam. intus* $2\frac{1}{4}$.

“Shell openly umbilicated, depressly convex, thin, smooth, shining, glassy, of an olive colour, with minute sub-obsolete decussating striæ, only visible beneath a powerful lens. Spire convex, apex obtuse, suture impressed and with an internal margination, due to the prolongation of the inner whorls of the keel surrounding the shell. Whorls 4, convex; the last descending slightly near the aperture, and becoming paler in colour in front on the outer half of the surface only, so that a band of darker colour surrounds the shell close to the suture. Of the two keels one is at the periphery, and rather lower in position than usual, owing partly to the raised spire, the other is at the base, rather towards the umbilicus, which exhibits all the whorls, and is closely spirally ribbed inside. Aperture round, oblique, peristome in one plane, simple, thickened. Operculum very similar to that of *Cyclophorus planorbis*, with the external edges of the whorls lengthened, jagged and split up into a fringe-like edge. Major diameter 0.26, minor 0.22, axis 0.14 inch.” (*Blanford*)

Hab. India. Calcut Hills, Travancore; Tinnevely (*Beddome*).

Ditropis (Dutopsis) planorbis, Kobelt, Das Tierreich, Lief. 16, 1902, p 76, text-fig 16 (p. 72)

Original description — "Testa latissime umbilicata, depressa, discoidea, vitrea, tenuis, olivacea, glabra, obsolete striatula, polita. Spira plana, nucleo non exserto, sæpe eroso, sutura impressa, at anfractum ultimum et supra et in umbilico costa sublata intus marginata. Anfr 4-4½, convexi, ultimus antice vix descendens sub-quadrangularis, supra atque subtus convexus, carinis duabus validis circumdatus, una ad peripheriam, altera juxta basin ad latus externum. Umbilicus perspectivus, omnes anfractus exhibens. Apertura obliqua, sub-quadrata, intus albido-labiata; peristoma incrassatum, rectum, non-expansum. Operculum intus convexum, extus concavum, marginibus anfractuum externorum laciniatum elongatis.

"Exempli majoris diam. maj 8½, min 7, alt 2, ap. diam 1½ millem. Exempli minoris diam. maj. 7, min. 5½, alt. 1½, ap. diam. (fere) 1½ millem

"Shell very broadly umbilicated, depressed, discoidal, thin, glassy, smooth and polished, with obsolete striation. Spire perfectly flat, the apex not rising above the surface, suture impressed; the nucleus is generally wanting, being apparently remarkably liable to erosion. Whorls 4 to 4½, slightly convex above, the last descending but slightly near the mouth, and nearly square, with two keels, the one rather high up, forming the periphery of the shell, the other at the outer side of the base; these keels can be traced upon the penultimate and part of the ante-penultimate whorl, both on the spire and within the umbilicus, forming a distinct rib inside the suture. Aperture oblique, nearly square, with a white internal lip; peristome thickened, all in one plane and not expanded. Operculum convex and smooth inside, the margins of the whorls externally much elongated and torn, especially towards the margin.

"Major diameter, from the edge of the peristome to the opposite margin, 0.34 inch, minor diam at right angles to the other, 0.28, height 0.08. A smaller specimen measures 0.27 and 0.2 in the two diameters, and 0.05 in height." (*Blanford*)

Cyclophorus (Scabrina) brownæ, Sykes, Proc. Malac. Soc. **iii**, 1898, p. 73, pl. 5, figs. 2, 3.

Scabrina brownæ, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. **xxxi**, 1899, p. 132, id., Cat. Pneum. 1899, p. 100, Kobelt, Das Tierreich, Lief. 16, 1902, p. 87.

Original description — "Testa late umbilicata, depresso conica, periostraco brunneo-fusco, scabro ornata, lineis elevatis spiralibus et costis remotis notata, in regione umbilicari lævior, spira subelevata, apice exserto, plicatulo, obtuso; sutura profunda; anfr. $4\frac{1}{2}$, convexi, ultimus versus aperturam parum descendens, apertura fere circularis, duplex, internum continuum, externum leviter expansum. Alt. 5.5, diam. max. 10.5 mm." (*Sykes*)

Hab. Ceylon. Nuwara-Eliya (*Mrs. Brown*)

The author draws special attention to the thick, rough periostracum, which forms distant radiating ridges, in addition to the usual spiral striation in many of the species, and states that no other known Ceylon species appears really to approach it.

41. *Scabrina calyx*, Benson.

- Cyclophorus calyx*, Benson, A. M. N. H. ser. 2, xvii, 1857, p. 228, Theobald, J. A. S. B. xxvi, 1857, p. 247. Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 56, id., Novit. Conch. ser. 1, ii, 1860, p. 145, pl. 37, figs. 25, 27, Reeve, Conch. Icon. xiii, 1861, *Cyclophorus*, pl. 20, fig. 104, Blanford, J. A. S. B. xxxiv, 1865, p. 97, Hanley & Theobald, Conch. Ind. 1870, pl. 4, fig. 4. *Cyclophorus (Scabrina) calyx*, Blanford, J. A. S. B. xxxii, 1863, p. 322, Nevill, Hand List, 1, 1878, p. 278. *Cyclostoma (Myxostoma) calyx*, Stoliczka, J. A. S. B. xl, part 2, 1871, p. 148 (animal). *Myxostoma calyx*, Theobald, Cat. Shells Brit. India, 1876, p. 36. *Scabrina calyx*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxi, 1897, p. 88; id., Cat. Pneum. 1899, p. 16, Kobelt, Das Tierreich, Lief. 16, 1902, p. 87, id., Conch.-Cab., Cyclophoridae, 1, 1908, p. 697, pl. 61, figs. 19, 20.

Original description.—"Testa late umbilicata, orbiculato-depressa, radiato-striatula, albida, strigis castaneis radiatis superne picta, spira planata, sutura impressa, apice vix prominulo; anfractibus $4\frac{1}{2}$ convexiusculis, ultimo compresso, subtus, circa

Fig 9—*Scabrina calyx* ($\times 2$.)

umbilicum minime profundum, latum, angulato; apertura obliqua, circulari, peristomate duplici, continuo, breviter adnato, externo incrassato, superne expanso, angulato. Operculo —?

"Diam. major 10, minor 8, axis 3 mill." (*Benson*)

Hab. Burma: Akoutong (*Theobald*), Moulmein (*Blanford*).

"The flattened depressed form of this shell, and the angular expansion of the outer peristome at the top of the aperture, render it easy of recognition among the depressed and widely umbilicate forms of *Cyclophorus*." (*Benson*.)

Blanford* thinks that some mistake must have been made in labelling, for he found the shell abounding in Moulmein, but although he repeatedly searched all round the Akoutong Hills he

* J. A. S. B. xxxiv, 1865, p. 97

never met with it. He also states * that Benson's description "must have been taken from a dead specimen which had lost both its epidermis and operculum." In living specimens he found the shell covered with "a scabious dark epidermis, radiately striated, and with raised spiral lines which, as in *C. hispidulus*, were more marked in young than in adult individuals. The operculum was slightly concave externally, in consequence of the edges of the whorls being raised and ragged, especially near the circumference; internally it was smooth and nearly flat, with a small central nucleus. *C. calyx* is well distinguished from *C. hispidulus* and *C. pinnulifer* by its smaller whorls, the strong subangulation around the umbilicus, the ornamentation beneath the epidermis and the markings of the epidermis itself, the raised ridges surrounding the shell being fewer and much more pronounced in *C. hispidulus*."

Stoliczka found the animal "identical in form with those of other Cyclophoridae, only of smaller size, when full grown the body is black, with very long subulate tentacles, slightly thickened near the tips, the rostrum is long and deeply cleft in front, the foot rather elongated, posteriorly narrowly produced and pointed; eyes rather small, placed laterally at the base of the tentacles on barely perceptible bulgings. The sides of the foot and the tentacles are usually paler than the body, and young specimens are pale grey coloured throughout. The largest specimens found south of Moulmein measure Diam. maj. 14, d. min 12, alt. testæ 7.2, alt. ult. anfr. cum perist. 5, diam. apert. int. 4 min."

The accompanying figures represent a specimen in the British Museum.

42. *Scabrina hispidula*, Blanford

Cyclophorus hispidulus, Blanford, J. A. S. B. xxxii, 1863, p. 321, id., op. cit. xxxiv 1865, p. 97, Hanley & Theobald, Conch. Ind. 1870, pl. 47, figs 5, 6,

Myrostoma hispidulum, Theobald, Cat. Shells Brit. India, 1876, p. 86

Scabrina hispidula, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 88; id., Cat. Pneum. 1899, p. 16, Kobelt, Das Tierreich, Lief. 16, 1902, p. 88

Original description — "Shell widely umbilicate, subplanulately depressed, radiately striated and marked by extremely fine and close concentric impressed lines, white, covered with a thick dark brown epidermis, which forms a broad raised spiral costulation around the shell, more marked in young than in fully grown specimens. Spire almost flat, apex just exerted, suture deep. Whorls 5, cylindrical, the last descending very little near the aperture, which is subventral and circular. Peristome double, inner lip continuous and projecting a little, outer lip slightly

* J. A. S. B. xxxii, 1863, p. 322.

expanded. Operculum multispiral, externally flat, the margins of the whorls being very rough and free, internally very slightly concave, with a minute central nucleus projecting.

"Major diam.	14 mm	0.55 inch.
Minor diam.	12 "	0.5 "
Altitude	7 "	0.28 "
Diameter of aperture	5 "	0.15 "

(Blanford)

Hab. Burma Mya Leit Doung near Ava (Blanford).

43. *Scabrina inghsiana*, Stoliczka.

Cyclophorus (Myxostoma) inghsianus, Stoliczka, J. A. S. B. xl, part 2, 1871, p. 148, pl. 6, fig. 1, Hanley & Theobald, Conch. Ind. 1876, pl. 148, figs. 8, 9

Myxostoma inghsianum, Theobald, Cat. Shells Br. India, 1876, p. 86

Cyclophorus (Scabrina) inghsianus, Nevill, Hand. List, i, 1878, p. 278

Scabrina inghsiana, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 88, id., Cat. Pneum. 1899, p. 16

Original description — "Oycl. testa subdiscoidea, late umbilicata; anfractibus $4\frac{1}{2}$, primo depresso, albido, lævigato, ceteris teretibus, paululum in amplitudine accrescentibus, sordide lutescente albescentibus, strigis fuscis, supra ietorse angulatis, ad peripheriam rotundatam ult. anfr. fascia castanea intersectis, notatis, epidermide pallida transversim rugulatum striata indutis, suturis profundis, simplicibus; apertura paulum descendente et obliqua, circulari, marginibus junctis, paululum incrassatis, haud dilatatis, supra prope suturam leviter insinuat. Operculo corneo, tenui, circulari, anfractibus 7 extus paulo lamelliforme exstantibus composito, medio depressiusculo, intus polito, medio submamillato. Diam. maj. 9, d. min. 7.5, alt. totius testæ 5, alt. ult. anfr. prope aperturam 3, diam. apert. 2.7 mm.

"Animal plumbeo-cinereum, tentaculis longis, acutis, nigricantibus, pede pallidescente, angusto, postice acuto, rostro longo, nigricante, antice ad marginem modice lobato" (*Stoliczka*)

Hab. Burma: Damotha near Moulmein (*Stoliczka*).

The author compares the present species with *Pterocyclus feddeni*, Blf., which it resembles in the colouring, but is easily distinguished by its thinner and very gradually increasing whorls, whose tubular form also readily separates the shell from *Cyclophorus calya*, which has the basal angulation always distinct.

44. *Scabrina pinnulifera*, Benson.

Cyclophorus pinnulifer, Benson, A. M. N. H. ser. 2, xix, 1857, p. 205, Theobald, J. A. S. B. xxvii, 1858, p. 318, Pfeiffer, Novit. Conch. ser. 1, ii, 1860, p. 145, pl. 37, figs. 22-24, Reeve, Conch. Icon xiii, *Cyclophorus*, 1861, pl. 5, fig. 17, Pfeiffer, op cit. Suppl 2, 1865, p. 72, Suppl 3, 1875, p. 116.

Theobaldus maculosus, Kobelt & Mollendorff, Nachr. Deuts Malak Ges xxix, 1897, p. 105, id., Cat Pneum. 1899, p. 17, Kobelt, Das Tierreich, Lief. 16, 1902, p. 93, id., Conch.-Cab., Cyclophoridae, 1, 1907, pp. 560, 566

Original description.—"Cycl. testa suborbiculari, depressa, crassiuscula, lævi, castanea, albido-maculosa, spira paululum levata, apice nigricante, anfractibus 4, rotundatis, obsolete spiraliter striatis, apertura subcirculari, peritremate subincrassato, sub-reflexo, postice acuminatusculo, umbilico maximo, spiraliter castaneo lineato" (Sowerby)

Alt. 13, maj diam 30, min. 23 mm.

Hab. Southern India (Kobelt & Mollendorff).

The country of origin of this species was unknown to Sowerby, and all subsequent writers dealing with it have queried its habitat, except Kobelt and Mollendorff, who indicated Southern India in 1897.

55. *Theobaldius nivicola*, Godwin-Austen.

Cyclophorus (Myxostoma) nivicola, Godwin-Austen, J. A. S. B xlv, part 2, 1876, p. 173, pl. 7, fig 1.

Cyclophorus (Theobaldus) nivicola, Nevill, Hand List, 1, 1878, p. 275.

Theobaldus nivicola, Kobelt, Das Tierreich, Lief. 16, 1902, p. 94

Original description.—"Shell flatly discoidal, openly umbilicated. Whorls 5, with distinct longitudinal striation, the last well rounded on the periphery, large, the rest rapidly decreasing, covered with a thick epidermis, colour dark brown-umber. At half the circumference from the apex fine zigzag pale ochreous markings ornament the upper surface, these widen and are arranged closer towards the apex, which is pale; a black band on the periphery is bounded by a pale narrow one. Spire slightly raised. Suture deep. Aperture oblique, very slightly descending, circular. Peristome thickened, double, reflected, with a small re-entering notch near the suture. Operculum corneous, flat.

"Major diam 1.0 [25.5 mm], alt 0.45 inch [11.25 mm].

Hab. India. Dafia Hills, Assam (Godwin-Austen).

"This form is a representative here of the Ceylonese *C. bairdii*. A variety of the same size but plain, with pale band on the periphery, on Toruputu Peak. Small (major diam 0.65 [1.65 mm.]) varieties also occur, both ornamented and plain, the latter are very similar in size and light ochreous colouration to *C. ravidus* of the Nilgiri Hills, but the former have fine zigzag markings and a single black band on the periphery." (*Godwin-Austen*.)

56. *Theobaldius oakesi*, *Godwin-Austen*

Cyclophorus oakesi, *Godwin-Austen*, *Records Ind. Mus.* viii, 1916, p. 502, pl. 40, fig. 1

Original description — "Shell globosely conoid, umbilicated, not widely. Sculpture, a strong epidermis, fine lines of growth. Colour strong sienna brown, mottled, broadish splashes of black. No peripheral band. Spire somewhat depressed, apex broad and blunt. Suture impressed. Whorls $4\frac{1}{2}$, well rounded. Aperture circular, suboblique. Peristome simple, not thickened, very slightly expanded, in the best specimen it is not fully formed. Operculum horny multispiral, smooth in front and concave.

Major diam. 9.4, alt. axis 4.8 mm "

Hab India Transpu Valley, Abor Hills, 2 specimens (*Oakes*)

"The subgeneric position of this species is very doubtful; the animal has not been seen." (*Godwin-Austen*)

The species is provisionally placed in the genus *Theobaldius*. I have not seen specimens.

57. *Theobaldius orites*, *Nevill*.

Cyclophorus (Theobaldius) orites, *Nevill*, *J. A. S. B.* 1, part 2, 1881, p. 147, pl. 6, fig. 4.

Theobaldius orites, *Kobelt & Mollendorff*, *Nachr. Deuts. Malak. Ges.* xix, 1897, p. 105, id., *Cat. Pneum.* 1899, p. 17, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p. 94; id., *Conch.-Cab.*, *Cyclophoridae*, 1, 1907, p. 567, pl. 71, figs. 14-16

Original description — "Broadly and openly umbilicate, solid, depressed, subdiscoidal, covered with a rather thick, smooth, bright yellow, or horn-coloured, epidermis, throughout, under the lens very minutely, closely, obliquely striated, spire perfectly flat, suture excavate; whorls 4, the last one perfectly round, increasing unusually rapidly in size, aperture circular, peristome double, the outer margin above near the body whorl, being slightly sub-angulately produced, showing a distinct transition to the 'wing-like' process of *Pterocyclus*, columellar margin oblique, the duplication of the peristome becoming obsolete

"Operculum thin, horny, slightly immersed, flat, composed of five or six acutely defined volutions.

"Alt. $5\frac{1}{2}$, diam. $14\frac{1}{10}$ mill" (*Nevill*)

Hab. India Chola Range, Sikkim.

58. *Theobaldius parapsis*, Benson.

- Cyclophorus parapsis*, Benson, A. M. N. H. ser. 2, xii, 1853, p. 90, Pfeiffer, Malak Blatt 1, 1854, p. 87; Adams, Gen. Rec. Moll. n., 1855, p. 280, Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 66, Reeve, Conch. Icon. xiii, 1861, *Cyclophorus*, pl. 18, fig. 90, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 4, Hanley & Theobald, Conch. Ind. 1876, p. xv.
Myriostoma parapsis, Theobald, Cat. Shells Brit. India, 1876, p. 37.
Cyclophorus (Theobaldius) parapsis, Nevill, Hand List, i, 1878, p. 277.
Theobaldius parapsis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 105, id., Cat. Pneum. 1899, p. 17, Kobelt, Das Tierreich, Lief. 16, 1902, p. 94; id., Conch.-Cab., Cyclophoridae, 1, 1907, p. 558, pl. 69, figs. 21-25.

Original description —“Testa late et perspective umbilicata, orbiculato-depressa, tenui confertim striatula, olivacea, sub epidermide tenui albida; spira planiuscula, apice vix prominulo, sutura profunda; anfractibus 4 convexiusculis, ultimo cylindrico, leviter descendente, non dilatato; apertura subverticali, sub-circulari, intus glaucescente, peristomate continuo, breviter adnato, recto, simplice, acuto. operculo tenui, corneo, arcte spirato, medio concaviusculo, intus obtuse umbonali.”

“Diam. major 13, minor 10, alt. 5 mill.”
Hab. Ceylon Damboul (*E. L. Layard*).

“It differs from *C. lowostoma*, Pfeiffer (a large and handsomely marked variety of which was found on the same rock), in colouring, epidermis, depth of suture, narrower and deeper umbilicus, and the more circular and vertical aperture, which exhibits nothing of the diagonal departure from the axis observable in Pfeiffer’s shell. The peristome also is acute and single, instead of being double, slightly expanded and thickened, as in that species, of which Mr Layard’s specimen is variegated with radiate and undulated chestnut stripes, and with a single band on a fulvous ground.” (*Benson*.)

59. *Theobaldius parma*, Benson.

- Cyclophorus parma*, Benson, A. M. N. H. ser. 2, xviii, 1856, p. 94, Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 55, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 4, Hanley & Theobald, Conch. Ind. 1876, p. 57, pl. 143, figs. 2, 3.

Myxostoma phænotopicum, Theobald, Cat Shells Brit. India, 1876, p 37.

Cyclophorus (Theobaldus) phænotopicus, Nevill, Hand List, i, 1878, p. 277

Theobaldus phænotopicus, Kobelt & Mollendorff, Nachr. Deuts. Malak Ges xxix, 1897, p. 105; id, Cat Pneum 1899, p. 17, Kobelt, Das Tierreich, Lief 16, 1902, p. 95; id, Conch -Cab., Cyclophoridae, i, 1907, p 567

Original description:—"Testa subaperte umbilicata, depressa, subdiscoidea, tenui, non nitente, struis scabris, acutis, radiatis, elevatis, aliis, impressis spiralibus, sub lente vix percipiendis, prope suturam decussatis, rufo-fusca, strigis angulatis, interruptis picta, spira depressa, apice prominula, sutura impressa, anfractibus $4\frac{1}{2}$ convexis, sensim accrescentibus; apertura circulari, peristomate tenui, recto, marginibus approximatis; umbilico profundo, perspectivo. Operculo corneo, tenui, concaviusculo, arotispirali, anfractibus 7-8

"Diam. major 12, minor 10, alt. 4 mill"

Hab. India Darjeeling, Sikkim (*Stoliczka, Theobald, H. F. Blanford, Mainwaring*).

"Although the larger of my two specimens does not bear the signs of age, yet, even if the peristome should be found to acquire a further development, the peculiar dull and sharp scabrous sculpture, as well as the narrower umbilicus, will serve to prevent

the species from being confounded with any allied form, such as *C. annulatum* and *C. stenostoma*, which possess a similar operculum. The impressed spiral striae are confined to the inner slope of the whorl, towards the suture, and are only visible under a lens." (*Benson*)

This description *Benson* subsequently amplified * as follows:—
"Peristomate verticali, integro, expansiusculo, subreflexo, superne duplicato, lamella exteriore ibidem subangulato.

"Diam. major 13, minor 10, axis $5\frac{1}{2}$ mill."

61. *Theobaldius ravidus*, *Benson*

Cyclostoma ravidum, *Benson*, A. M. N. H. ser 2, viii, 1851, p. 190, Pfeiffer, *Conch.-Cab*, Cyclostomaceen, 1854, p. 385, pl. 50, figs. 14-16

H. ser 2, xiv, 1854, p. 415, *Adams*, *Gen. Rec. Moll.* ii, 1855, p. 280, *Reeve*, *Conch. Icon.* xiii, 1861, *Cyclophorus*, pl. 20, fig. 102, *W. T. & H. F. Blanford*, J. A. S. B. xxx, 1861, p. 364, *Blanford*, J. A. S. B. xxxviii, 1869, p. 143, *Hanley & Theobald*, *Conch. Ind.* 1875, p. 42, pl. 105, figs. 5, 6

Myxostoma ravidum, *Theobald*, *Cat. Shells Brit. India*, 1876, p. 37.

Cyclophorus (Theobaldus) ravidus, *Nevill*, *Hand List*, i, 1878, p. 276 (+ var. *anamullayensis* and var. *wynaadensis*)

Theobaldus ravidus, *Kobelt & Mollendorff*, *Nachr. Dents. Malak. Ges.* xxix, 1897, p. 105, id., *Cat. Pneum.* 1899, p. 17, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p. 95, id., *Conch.-Cab*, Cyclophoridae, i, 1907, p. 568

Original description — "Testa aperte umbilicata, subdiscoidea, nitidiuscula, confertum scabrae tenuiter radiato-striata, olivaceo-lutea, sub epidermide alba, spira vix elevata, apice planato, obtuso, sutura impressa, anfractibus 4 convexiusculis, lente accrescentibus, ultimo cylindraceo, antice vix descendente, superne prope suturam sub lente obsolete spirali striato, apertura obliqua, circulari, peristomate tenui, recto, marginibus callo tenui junctis, umbilico lato, perspectivo, operculo tenui, corneo, multispirato, extus concaviusculo

"Diam. major 15, minor 13, axis 7 mill."

Hab. India, Nilgiris (*Jerdon, Blanford*), Kolamullay (*Blanford*); Anamullay Hills, Wynaad, Battlingh, Battenpathi, Shevayoy Hills (*Beddome*).

"The species differs from *C. annulatum*, *Troschel*, which has a similar operculum, in the more closely-wound whorls, in the narrower umbilicus, more delicate sculpture, and absence of any pattern on the upper side." (*Benson*)

Blanford states † that the species attains a considerably larger size in the Anamullay Hills and the Wynaad than the type, shells from the former locality measuring 27 mm. by 22 mm., and

* A. M. N. H. ser 2, x, 1852, p. 271

† J. A. S. B. xxx, 1861, p. 143

from the latter 24 mm by 19.5 mm. The operculum, when in good condition, has raised margins to the whorls. He was inclined, however, to consider the species identical with *C. annulatus*, from Ceylon.

Fig 10—*Theobaldius ravidus* (Shell nat size, operc $\times 3$)

Nevill separated these two forms from the type as varieties, naming them *anamullayensis* and *wynaadensis* respectively, without, however, giving any definition, he even added in brackets “? sp. nov.”

The specimen now figured is from the Beddome collection kindly lent by Mr Leman. It measures 16×14 mm in diameter, alt 8 mm. The operculum is many-whorled and closely coiled.

62 *Theobaldius shiplayi*, Pfeiffer.

Cyclostoma (*Cyclophorus*) *shiplayi*, Pfeiffer, Proc Zool Soc 1856, p 337, id, Mon Pneum. Suppl 1, 1858, p 68, Reeve, Conch. Icon. xiii, 1861, *Cyclophorus*, pl 18, fig 85; Pfeiffer, Mon Pneum Suppl. 2, 1865, p. 76, Hanley & Theobald, Conch Ind. 1876, p. 57, pl 143, figs 7, 10

Original description —“T. suborbiculari, depressa, crassa, lævi, castanea, albido-maculosa; spira fere plana, anfractibus 4, subrotundatis; apertura fere circulari, postice subangulata, paululum coarctata, peritremate subincrassato, umbilico maximo; operculo corneo, anfractibus sex.

“Shell suborbicular, depressed, thick, smooth, chestnut coloured with whitish specks, spire nearly flat, volutions 4, somewhat rounded; aperture nearly circular, angular posteriorly, slightly contracted; peritreme a little thickened, umbilicus very large, operculum horny, with six volutions. Arabia.” (*Sowerby*)

Hab. India Nilgiris (*Blanford*), Ootacamund (*Stolaczka*).

Var. anguis, *Hanley & Theobald*.

Cyclophorus stenostoma, var. *anguis* (*Sowerby*), *Hanley & Theobald*, Conch. Ind. 1875, p. 43, pl. 105, fig. 9.

Theobaldius stenostoma, var. *anguis*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 96.

Larger than the type, and has the entire upper surface concentrically shagreened by wavy and somewhat broken raised wrinkles. Hanley and Theobald considered this variety to be possibly a distinct species.

Hab. India Nilgiris.

The type was originally stated by Sowerby to be from Arabia, evidently an error.

64 *Theobaldius subplicatus*, *Beddome*

Cyclophorus subplicatus, Beddome, P. Z. S. 1875, p. 452, pl. 53, figs. 25-27; Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 400.

Cyclophorus subplicatulus, Hanley & Theobald, Conch. Ind. 1876, p. xv, pl. 145, figs. 5, 7.

Myxostoma subplicatulus (*Bedd*), Theobald, Cat. Shells Brit. India, 1876 Addenda, p. 11.

Theobaldius subplicatus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 105, id., Cat. Pneum. 1899, p. 17, Kobelt, Das Tierreich, Lief. 16, 1902, p. 96, id., Conch.-Cab., Cyclophoridae, i, 1907, p. 568, pl. 70, figs. 18, 14.

Original description.—"Shell broadly umbilicated, depressed, solid, of a dark chestnut-brown and covered with a dusty fuscous epidermis when young, closely striated obliquely and inconspicuously, spirally lirate, and ornamented with oblique rather inconspicuous scarcely raised folds or plications which are angled above the region of the periphery on the lowest whorl and again run backwards; spire slightly elevated, apex obtuse, sutures deep; whorls 4, convex, the last descending slightly towards the peristome; aperture oblique, subcircular, angled at its left apex, peristome double, both lips continuous, the inner white, the outer scarcely expanded except at its left apex, operculum of a single horny thin layer, subconcave externally, with 6 spiral whorls diameter $1\frac{1}{8}$ inch [27 mm.], height $\frac{3}{8}$ inch [9.5 mm.]"

Hab. Ceylon · Haycock Mountain (*Beddome*).

"Very like *C. layardi*, but with the spiral lines much less prominent and furnished with peculiar oblique folds, and the peristome less reflexed." (*Beddome*.)

65. *Theobaldius thwaitesi*, Pfeiffer

Cyclophorus thwaitesi, Pfeiffer, Proc. Zool. Soc. 1854, p. 127, Reeve, Conch. Icon. xiii, 1861, *Cyclophorus*, pl. 18, fig. 87, Hanley & Theobald, Conch. Ind. 1870, pl. 3, fig. 9 (not fig. 8), 1876, p. xv, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 4, Jousseaume, Mém. Soc. Zool. France, vii, 1894, p. 305.

Original description.—"C. testa late umbilicata, depressa, subdiscoidea, tenui, subconfertim arcuato-striata, nitidula, luteo-fulva, strigis angulosis castaneis eleganter flammata, spira subplana, vertice vix prominulo; sutura profunda, anfr. 4, modice convexa, celeriter accrescentibus, ultimo terete, antice vix descendente; apertura fere diagonali, ovali-rotundata; intus submarginata, perist. simplice, acuto, marginibus fere contiguis, callo tenui junctis, dextro expansiusculo, columellari subreflexo.

"Diam. maj. 12, min. 9, alt. 5 mill." (*Pfeiffer*.)

Hab. Ceylon (*Thwaites*), Kandy, Galle (*Simon*).

66. *Theobaldius tristis*, Blanford.

Pterocyclos? tristis, Blanford, J. A. S. B. xxxviii, part 2, 1869, p. 134, pl. 16, fig. 9, Theobald, Cat. Shells Brit. India, 1876, p. 38, *Cyclophorus tristis*, Hanley & Theobald, Conch. Ind. 1876, p. 57, pl. 148, figs. 5, 6.

Cyclophorus (*Theobaldus*) *tristis*, Nevill, Hand List, 1, 1878, p. 276
Theobaldus tristis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges.
 xxix, 1897, p. 105, id., Cat. Pneum. 1899, p. 17, Kobelt, Das
 Tierreich, Lief. 16, 1902, p. 96, id., Conch.-Cab., Cyclophoridae,
 1, 1908, p. 700, pl. 70, figs. 11, 12.

Original description —“Testa late umbilicata, depressa, tenuis, epidermide crassa, fulvescenti-brunnea induta; sub epidermide albida, striatula. Spira convexa, apice parum exserto, per-obtusum, sutura profunda. Anfr. 5 rotundati, ultimus teres, longe sensim descendens. Apertura obliqua, rotunda, peristoma brevissime adnatum, duplex, internum parum porrectum, superne juxta suturam vix sinuatum; externum leviter expansum, continuum, a peristomate interno sulco discretum, supra ejus sinum in alam verticalem parvam, instar tubuli imperfecti, antice spectantem anfractum penultimum non attingentem, breviter cucullatum productum. Operc. ? Diam. maj. $19\frac{1}{2}$, min. 16, axis $9\frac{1}{2}$ mill. Ap. diam. intus $6\frac{1}{2}$.”

“Shell widely umbilicated, depressed, thin, covered with a thick, olivaceous brown epidermis, beneath the epidermis white, faintly striated. The epidermis is closely rugately striated near the suture. Spire convex, apex scarcely exserted, obtuse, suture deep. Whorls 5, rounded, the last cylindrical, descending very gradually for a considerable distance behind the aperture. Mouth oblique, circular, peristome double, the two portions divided by a groove, the inner slightly projecting, with a very small, almost obsolete sinus above, close to the suture; the outer a little expanded, and produced above into a short vertical wing, opening in front, and forming an imperfect tube; it is just above the imperfect sinus in the inner peristome, and does not touch the penultimate whorl. Operculum unknown. Major diameter 0.8, minor 0.62, axis 0.36, diameter of the aperture 0.26 inch.” (*Blanford*)

Hab. India. South Canara, Tinnevely (*H. Beddome*)

In the absence of the operculum the species was doubtfully referred to the genus *Pterocyclus* by the author, but the subsequent discovery of specimens with the operculum led Hanley and Theobald to refer it to *Cyclophorus*.

Genus *CYCLOPHORUS*, Montfort.

Cyclophorus, Montfort, Conchyl. Syst. ii, 1810, p. 290, Pfeiffer, Zeits. Malak. iv, 1847, p. 107; id., Mon. Pneum. 1852, p. 54, Adams, Genera Rec. Moll. ii, 1855, p. 279, Fischer, Man. Cyclostoma (Cyclophorus) pirreanum, Pfeiffer, P. Z. S. 1853, p. 51.

Cyclophorus pirreanum, Pfeiffer, Malak. Blätt. i, 1854, p. 85, Benson, A. M. N. H. ser. 2, xiv, 1854, p. 415, Adams, Gen. Rec. Moll. ii, 1855, p. 280, Pfeiffer, Mon. Pneum. Suppl. 1, 1853, p. 53.

Original description:—"Testa umbilicata, depresso-turbinata, solida, iris spiralis 8–9 majoribus, quibusdam parvis obsoletis inæquidistantibus interjectis munita, castanea, ad peripheriam albido-articulata, infra fascia latissima saturatiore, superne strigis radiatis angustis undatis albidis frequentioribus, subtus rarioribus ornata; spira ad apicem exsertiuscula, obtusata; anfractibus 5, convexiusculis, ultimo ad peripheriam subfuniculato-carinato, superne angulato, circa suturam late planato, subtus circa peromphalum excavatum lævigatum compresso, umbilico mediocri profundo, subcylindrico; apertura obliqua, pyriformi-rotundata, aurantiaca, fauce cærulescente, peristomate expanso, incrassato, reflexiusculo, aurantiaco, breviter adnato, prope umbilicum leviter sinuato, superne angulato, producto, intus sulco intrante impresso.

"Diam. major 43–45, minor 34–36, axis 22–24 mill."

Hab. India: Nilgiris (*Jerdon*, *Blanford*, *Beddome*); Travancore (*Bourdillon*), Walaghat, Koondah Hills (*Purrie*); South Canara, Balarangam (*Beddome*).

"The young of *C. nilagiricum* preserved its distinctness from *C. Jerdoni* in the same condition by its sculpture, colour, the depression of the spire, the broad flattening observable above the shoulder of the whorl, the angulation of the shoulder, the excavation of the perioniphalum, its compressed angulated edge, and by the blue colour of the interior, which is bordered with chestnut in the young, but gradually gives place to the orange of the peristome in the adult example of *C. nilagiricum*, while the whole of the interior is white in both states of *C. Jerdoni*. The spiral striæ are not very conspicuous on the underside of *C. nilagiricum*, and are entirely discontinued at a short distance from the periphery, the region of the umbilicus being smooth. In most of the allied species the umbilicus and its neighbourhood are pale, but in this species the dark chestnut ground colour of the shell extends over the whole exterior surface where not broken by flecks or streaks of whitish" (Benson)

76. *Cyclophorus pœciloneurus*, Godwin-Austen & Beddome.

Cyclophorus pœciloneurus, Godwin-Austen & Beddome, A. M. N. H. ser. 6, xiii, 1894, p. 507

Cyclophorus (Litostylus) pœciloneurus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xix, 1897, p. 105, id., Cat. Pneum. 1899, p. 17, Kobelt, Das Tierreich, Lief. 18, 1902, p. 102

Original description—"Shell umbilicated, turbinate, keeled; sculpture, apex smooth and shining, five distinct lirate ribs run contiguous to the suture on the lower margin of the whorls, commencing with the third whorl, these have two finer thread-like ribs between them, and similar fine liration is continued above and on the lower surface of the shell, crossed by strong lines of growth on the epidermis. Colour umber-brown, marbled with madder-brown, given off from a few strong spots of this colour next the suture, the peripheral rib is dashed with white at intervals. Spire conoid, sides flat, apex sharp, suture shallow, whorls 5, subconvex, the last sharply keeled, forming a strong rib, aperture oblique-ovate, ample on the outer margin, grey within, peristome white, well thickened in mature shells, sharply reflected.

	Max diam mm	Min diam mm	Alt axis mm
"Type	31	25.75	15
Col. Beddome's largest sp.	33	26	16
Var. with red lip (<i>aureolabris</i> , Nev.) }	34.5	27.5	15.5"

Hab India: Lahupa Naga Hills (Godwin-Austen), eastward to the Dihing River (Ogle), Naga Hills (Doherty), Maokokchung, Naga Hills (Muspratt).

"In these eastern hills this form takes the place of *C. zebrinus* of the Khasi Hills &c., but it is much larger, the spiral ribbing is much stronger, the whorls are more convex, and it is more openly umbilicated.

"All the specimens in Lieut.-Col. Godwin-Austen's collection, and also those collected by Mr. Doherty, are white-lipped shells, among the specimens received by Col. Beddome the red-lipped predominate.

Fig 12 — *Cyclophorus poeciloneurus*.

"The coloration is very variable; in some, as in the type, the marbling occurs in fine zigzag lines far apart, in other examples these are so closely run together as to give the shell a beautiful ruddy colour." (*Godwin-Austen & Beddome*.)

This species remained unfigured until Dr. Kobelt illustrated the variety *aureolabris* in the Conchylien-Cabinet from a specimen in the Mollendorff collection. The shell now figured represents the typical, white-lipped form. It is from the Beddome collection and measures. Major diam. 33, min. 27.5 mm. Alt. (incl. apert.) 28 mm.

Var. *aureolabris*, Nevill.

Cyclophorus zebrinus, var. *aureolabris*, Nevill, Hand List, 1, 1878, p. 268.

Cyclophorus poeciloneurus, var. *aureolabris*, Godwin-Austen, A.M.N.H. ser. 6, xiii, 1894, p. 508.

Cyclophorus (Litostylus) poeciloneurus, var. *aureolabris*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 102; id., Conch.-Cab., Cyclophoridae, 1, 1908, p. 639, pl. 90, figs. 10-12.

A large variety with the peristome of a brilliant orange-colour. Diam. 34.5 mm.

The Beddome collection contains three specimens of this variety, agreeing well in outline with Kobelt's figure, but they are much darker in colour.

77 *Cyclophorus polynema*, Pfeffer.

Cyclostoma (Cyclophorus ?) polynema, Pfeffer, Proc. Zool. Soc. 1854, p. 126, id., Mon. Pneum. Suppl. 1, 1858, p. 46, Suppl. 2, 1866, p. 64, Suppl. 3, 1875, p. 103, Hauley & Theobald, Conch. Ind. 1870, pl. 2, fig. 8, 1876, p. xv, Theobald, Cat. Shells Brit. India, 1876, p. 36, Nevill, Hand List, 1, 1878, p. 272.

Cyclophorus (Latostylus) polynema, Kobelt & Mollendorff, Nachr Deuts Malak Ges xxix, 1897, p. 106, id, Cat Pneum. 1899, p. 18, Kobelt, Das Tierreich, Lief 16, 1902, p. 102, id., Conch-Cab, Cyclophoridae, 1, 1908, p. 651, pl 93, fig. 8

Original description :—"C testa umbilicata, depresso-turbinata, tenuiusculo, oblique striatula et liris filiformibus confertissimis, subtus obsoletioribus, cincta, superne flammis angulosis læte castaneis et albidis variegata; spira brevi, turbinata, apice obtusula, anfr. 4½, convexiusculis, rapide accrescentibus, ultimo ad suturam antice subplanato, periphæria obsoletissime angulato et fascia lata, nigro-fusca, deorsum diluto ornato, circa umbilicum mediocrem pallido, apertura obliqua, subrotundata, latiore quam alta, perist. albo, continuo, breviter adnato, margine dextro expansiusculo, columellari breviter revoluto.

"Diam. maj. 33, min 26, alt 17 mil." (*Pfeiffer*)

Hab. India: Cuttack, Manbhoom (*Stoliczka*).

78. *Cyclophorus pyrotrema*, Benson.

Cyclophorus pyrotrema, Benson, A M N H ser. 2, xiv, 1854, p 412, Adams, Gen Rec. Moll ii, 1855, p 280, Pfeiffer, Mon Pneum. Suppl. 1, 1858, p 45, Reeve, Conch Icon xiii, 1861, *Cyclophorus*, pl 4, fig. 13, Hanley & Theobald, Conch. Ind 1870, pl. 2, fig. 10, + var fig 9, 1876, p xv, Theobald, Cat. Shells Brit India, 1876, p. 36, Nevill, Hand List, 1, 1878, p. 272, Martens, Arch Naturg lxxv, part 1, 1899, p 31.

Cyclophorus (Latostylus) pyrotrema, Kobelt & Mollendorff, Nachr Deuts Malak. Ges. xxix, 1897, p 106, id, Cat. Pneum. 1899, p 18, Kobelt, Das Tierreich, Lief 16, 1902, p 103; id, Conch.-Cab., Cyclophoridae, 1, 1908, p 665, pl. 97, fig 3

Original description —"Testa umbilicata, turbinato-conica, solida, superne costis spiralibus, obtusiusculis, confertis, striisque obliquis confertissimis sculpta, castaneo albidoque fulguratum strigata et marmorata, spira conica, elevatiuscula, apice acuto. Anfractibus 5 convexis, ultimo fascia albida mediana, infra periphæriam obsolete angulatam fascia lata, subtus nonnullis alius castaneis ornata, basi valde convexa circa umbilicum submediocrem pervium albida, apertura vix obliqua, irregulariter subcirculari, superne angulata, intus lactea vel cærulescente, peristomate duplci, breviter ad aufractum penultimum adnato, interno continuo, expansiusculo igneo, externo reflexiusculo albidio, margine columellari sensim arcuato, fere verticali, subrevoluto, subsinuato. Operculo normali, tenui, pallide fusco, margine anfractuum elevatiusculo, scabro.

"Diam major 36, minor 30, alt. 26 mill.

" " 34, " 28, " 24 "

" " 26, " 21, " 18, " "

Hab India Sikrugal, Patharghata, Bahar (*W H Benson*); Rajmehal Hills (*Raban*), Rungpore (*H F. Blanford*); Burma: Padoukbin, Thyet-Myo (*Notling*).

"With a general resemblance in form to *C. indicus*, Desh., it will be at once distinguished by the absence of a keel or acute spiral ribs, by the wider umbilicus, less developed peristome, and more elevated form. The very gradual arcuation of the columellar lip is also an essential character, detracting from the uniformity of the circular aperture. The sinus observable at this part, impinging on the plane of the aperture, is also conspicuous in *C. indicus*.

"A variety occurs in which the shell is of a pale buff colour, darker towards the apex, the bands and markings being obsolete, and the colour of the peristome being equally vivid with that of the typical shells. Another thinner variety occurs in which the interior coloured lip is not present." (*Benson.*)

79 *Cyclophorus spironema*, *Pfeiffer*.

Cyclostoma (*Cyclophorus*) *spironema*, Pfeiffer, Proc Zool Soc. 1854, p 127, id, Mon Pneum Suppl 1, 1858, p. 53, Suppl 2, 1865, p 67, Suppl 3, 1875, p 109

Cyclophorus (*Litostylus*) *spironema*, Kobelt & Mollendorff, Nachr Deuts Malak Ges xxix, 1897, p 106 id, Cat. Pneum 1899, p. 18, Kobelt, Das Tierreich, Lief. 16, 1902, p 104.

Original description—"C. testa umbilicata, subturbinato-depressa, solida, iris crebris filiformibus sculpta, superne læte castaneo et albido variegata; spira brevi, vertice acutiusculo; sutura submarginata, anfr. 4, convexis, rapide accrescentibus, ultimo juxta suturam subplanato, ad peripheriam rotundatum

Fig 13—*Cyclophorus spironema*

fascia alba et infra eam altera læte castanea ornato, circa umbilicum latiusculum sublævigato, pallido, apertura vix obliqua, subangulato-circulari, perist. continuo, breviter adnato, vix expanso, ætate in tubum medicrem, spiraliter striatum, producto

"Diam. maj 28, min 22½, alt 14 mill" (*Pfeiffer*)

Hab. India.

The species is now illustrated for the first time from a specimen in the British Museum. Two specimens in the Beddome collection—labelled Burma—have the peristome much more thickened and lengthened into a tube.

Subgenus **GLOSSOSTYLUS**, Kobelt & Mollendorff.

Glossostylus (nom. nud.), Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. **xxix**, 1897, p. 106 (part), id., Cat. Pnæum. 1899, p. 18; Kobelt, Das Tierreich, Lief. 16, 1902, p. 105.

TYPE, *Cyclostoma validum*, Sowerby.

RANGE. India, Farther India, Formosa, Malaysia, Philippines.

"Shell depressed or conoid, generally with spiral keels. Peristome thickened, frequently with a winglike expansion, last whorl not dilated at the aperture." (Kobelt in German.)

80 *Cyclophorus altivagus*, Benson.

Cyclophorus altivagus, Benson, A. M. N. H. ser. 2, **xiv**, 1854, p. 411, Adams, Gen. Rec. Moll. **i**, 1855, p. 279, Pfeiffer, Mon. Pnæum. Suppl. **1**, 1858, p. 57, Reeve, Conch. Icon. **xiii**, 1861, *Cyclophorus*, pl. 13, fig. 55, Hanley & Theobald, Conch. Ind. 1870, pl. 34, figs. 2, 3, fig. 6 (var.), Nevill, Hand. List, **i**, 1878, p. 265.

Cyclophorus (*Glossostylus*) *altivagus*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. **xxix**, 1897, p. 106, id., Cat. Pnæum. 1899, p. 18, Kobelt, Das Tierreich, Lief. 16, 1902, p. 106, id., Conch.-Cab., Cyclophoridae, **i**, 1908, p. 655, pl. 94, figs. 8, 9.

Cyclostoma stenomphalum, var. *aurora* (non Benson), Pfeiffer, Conch.-Cab., Cyclostomaceen, 1854, p. 384, pl. 50, figs. 11-13.

Original description—"Testa angustissime umbilicata, fere perforata, globoso-conica, solida, striata, superne rufa, castaneo picta, subtus versus periomphalum albida, spira elevata, turbinata, acutiuscula, anfractibus $5\frac{1}{2}$ convexis, superne costis spiraliibus sex munitis, ultimo rotundato, ad periphæriam vix carinato, basi lævigata, umbilico pervio; apertura vix obliqua, suboval-circulari, superne angulata, intus lutescente, peristomate duplici, interno continuo, valde porrecto, acuto, externo expansiusculo, costam fingente, superne anguste angulatim adscendente, ad anfractum penultimum late emarginato, margine columellari minime sinuato, supra umbilicum angustum dilatato-reflexo. Operc.?"

"Diam. major 31, minor 26, alt. $24\frac{1}{2}$ mill. Apert. intus 17 mill. longa, 15 lata.

"It differs from this species [*Cyclophorus indicus*] in its more elevated form, indistinct keel, rounded last whorl, more elongate aperture, porrect inner lip, the absence of any sinuosity in the plane of the aperture on the columellar lip, less expanded outer peristome, and by the greater expansion of the external columellar lip over the umbilicus, which is also much narrower; and permits no view of the internal whorls." (Benson.)

HAB. India: Mahableshwar (A. E. Benson, Blanford).

81. *Cyclophorus aurora*, Benson.

Cyclostoma aurora, Benson, A. M. N. H. ser 2, viii, 1851, p. 186
Cyclophorus aurora, Pfeiffer, Zeits. Malak. viii, 1851, p. 140, id.,
 Mon. Pneum. 1852, p. 72, Adams, Gen. Rec. Moll. ii,
 1855, p. 279, Theobald, J. S. A. B. xxvii, 1858, p. 321, Reeve,
 Conch. Icon. xiii, 1861, *Cyclophorus*, pl. 9, fig. 38, Hanley &
 Theobald, Conch. Ind. 1870, pl. 3, fig. 4, Godwin-Austen,
 J. A. S. B. xlv, part 2, 1876, p. 173, Nevill, Hand. List, i, 1878,
 p. 265; Godwin-Austen, Moll. India, i, 1886, p. 205, pl. 51, figs. 1,
 2-2' (animal)
Cyclophorus (Glossostylus) aurora, Kobelt & Mollendorff, Nachr. Deuts.
 Malak. Ges. xxix, 1897, p. 106, id., Cat. Pneum. 1899, p. 18;
 Kobelt, Das Tierreich, Lief. 10, 1902, p. 107; id., Conch.-Cab.,
 Cyclophoridae, i, 1908, p. 641, pl. 91, fig. 2 (var.).

Original description.—"Testa anguste umbilicata, globoso-sub-
 turbinata, spiraliter 5-6 obsolete carinata, ferruginea, versus
 apicem rubente, oblique rugulosa, spira conoidea, apice obtusi-
 usculo, anfractibus $4\frac{1}{2}$ convexiusculis, ultimi periphæria obsolete
 angulata, apertura ampla, vix obliqua, circulari, superne angulata;
 peristomate continuo, expansiusculo, subincrassato, reflexiusculo,
 aurantio; fauce rubente.

"Diam. maj. 28, min. 23, axis 19 mill." (*Benson*.)

Hab. India Darjeeling, Sikkim (*Stoliczka*, *H. F. Blanford*,
Mamwaring), Bhutan; Duffa Hills, Assam (*Godwin-Austen*.)

Nevill regarded the present species as a variety of *O. hima-
 layanum*, Pfr., but Benson, while admitting near relationship,
 considered the two forms distinct. The latter is more depressed
 and has a wider umbilicus. Pfeiffer, on the other hand, classed it
 as a variety under *C. stenomphalus*, but the figure in Conch. Icon.,
 which illustrates one of Benson's specimens, does not bear out
 this view.

82. *Cyclophorus bapuensis*, Godwin-Austen

Cyclophorus (Glossostylus) bapuensis, Godwin-Austen, Records Ind.
 Mus. viii, 1915, p. 494, pl. 38, fig. 2

"The description of this species follows that of *sulciensis* in many
 particulars, but it is not nearly so keeled. It has a distinct peri-
 pheral band. The umbilicus is more open and not so concealed.
 The spire is lower, sides less flat, and first three whorls much
 smaller. Suture more impressed. Whorls, aperture, and peri-
 stome the same.

"Major diam. 33, alt. axis 16 mm." (*Godwin-Austen*.)

Hab. India Abor Hills, vicinity of Bapu (*Oakes*)

Cyclophorus (Glossostylus) zebrinus, var. *cybea*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 123.

Original description.—"Testa anguste umbilicata, tenui, turbinato-conica, striatula, lineis elevatis remotis spiralibus cincta, albida, strigis castaneis undulatis picta, spira conica, apice obtusiusculo, sutura impressa, anfractibus 5 convexiusculis, ultimo acute carinato, apertura magna vix obliqua, subcirculari, superne angulata; peristomate expanso-reflexo, margine columellari sinuato. Operculo corneo, 8-spirato.

"Diam. major 20, minor 16, axis 14 mill." (Benson.)

Hab. India. Nancloi Pongji, Assam (Theobald).

88 *Cyclophorus exul*, Benson.

Cyclophorus exul, Benson, A. M. N. H. ser 2, xiv, 1854, p. 412, Adams, Gen. Rec. Moll. ii, 1855, p. 230, Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 46, Reeve, Conch. Icon. xiii, 1861, *Cyclophorus*, pl. 13, fig. 53, Hanley & Theobald, Conch. Ind. 1870, pl. 47, fig. 7, Theobald, Cat. Shells Brit. India, 1876, p. 36, Nevill, Hand List, i, 1878, p. 265.

Cyclophorus (Glossostylus) exul, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 107, id., Cat. Pneum. 1899, p. 19, Kobelt, Das Tierreich, Lief. 16, 1902, p. 111; id., Conch.-Cab. Cyclophoridae, i, 1908, p. 644, pl. 91, fig. 6.

Original description.—"Testa angustissime umbilicata, fere perforata, globoso-turbinata, tenui, undique lineis spiralibus vix elevatis, superne 8-9 valde obtusis, strisque obliquis teneribus decussata; sub epidermide fusca, tenui, albida, superne castaneo flexuoso-strigata, fascia nulla mediana cincta, spira turbinata, apice obtusulo, rufescente, suturis distinctis. Anfractibus 5 convexis, ultimo rotundato. Apertura vix obliqua, subcirculari, superne angulata; peristomate simplici, tenui, expanso, reflexiusculo, vix continuo, margine columellari umbilicum non pervium subtegente.

"Diam. major $25\frac{1}{2}$, min. 20, alt. 17 mill. Apert. intus 13 mill. longa."

Hab. India: Bhamoury (Boys); Sikkim, Darjeeling (Stoliczka).

"This shell differs from the pale-lipped *C. pyrotrema*, in which the aperture is not fully developed, by its more globose form, ventricose last whorl, small impervious umbilicus, more regular sculpture above, stronger sculpture below, thinness, pale colour, and the absence of any medial fascia. From the pale-lipped variety of *C. stenomphalum* with undeveloped peristome, it differs by the greater breadth of the aperture in proportion to its length, its non-pervious umbilicus, the absence of any carina at the periphery, the more closely sulcate and regular sculpture above, the extension of the sculpture on the under side into the umbilicus, its pale suite of colours, and by the absence of any colouring below the periphery. From *C. indicus* it may be known by the absence of keel, suite of colours, sculpture, and aperture." (*Benson.*)

Nevill doubted its validity as a species, for in his *Hand List*, while admitting the name, he adds in parenthesis "? small var. of *C. himalayanus*." It may be that the shells collected by Stoliczka in Sikkim differ somewhat from the type. Another set of eight shells, collected also by Stoliczka at Kurseong, near Darjeeling, are separated by Nevill as a variety which, however, he does not name, but he adds in parenthesis "? *C. polynema*, Benson."

90. *Cyclophorus fuscicolor, Godwin-Austen*

Cyclophorus fuscicolor, Godwin-Austen, J A S. B. xlv, part 2, 1876, p. 173, pl. 8 A, fig. 1

Cyclophorus (Glossostylus) fuscicolor, Kobelt, Das Tierreich, Lief 16, 1902, p. 112

Original description —"Shell umbilicated, globosely turbinate, covered with a greyish umber-brown epidermis, with radiating longitudinal lines of ornamentation, the bands of colour rather broader towards the apex, but throughout very close together, in some specimens coalescing on the last whorl into a uniform dark shade of brown. Spire conical, apex sharp. Whorls 6, well rounded, with a single slightly raised ridge upon the keel. Aperture circular, sub-oblique, peristome continuous, double, very slightly reflected. Within the aperture grey.

"Alt. 1.24 [31 mm.], major diam. 2.30 inches [58 mm.]."

Hab. India Dafia Hills, Assam (*Godwin-Austen*).

"This is a very distinct form allied to *C. bensoni* from the southern face of the Khasi Hills, shewing towards the apex in some specimens a tendency to the zigzag painting of that shell, but the uniform, striate, and sober colouring of the rest of the whorls is a very marked character. Two specimens have a moderately broad white band on the periphery, owing to the abrasion of the epidermis upon the raised ridge of the keel." (*Godwin-Austen*.)

Cyclophorus (Glossostylus) indicus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 107, id., Cat. Pneum. 1899, p. 19, Kobelt, Das Tierreich, Lief. 16, 1902, p. 113.

Original description :—"O. testa orbiculata, turbinata, apice acuta, transversim striata, striis grossiusculis distantibus; anfractibus convexis, fusco-marmoratis; ad peripheriam linea nigra distinctis, apertura aurantia circulari, marginibus incrassatis, dilatatis.

" Cette belle espèce de Cyclostome est remarquable par sa taille et ses couleurs ; il a la forme d'un turbo, sa spire, conique et pointue au sommet, se compose de six ou sept tours très convexes, à suture simple et à peine creusée, le dernier tour est très convexe. Sa circonférence est subcarinée et au centre il est pourvu d'un trou ombilical très profond et assez étroit. L'ouverture est d'un beau jaune orangé, elle est oblique à l'axe ; ses bords sont épaissis et renversés en dehors. La surface extérieure est couverte de stries fines et subgranuleuses, quelques unes, un peu plus grosses que les autres, sont distantes et ne se montrent qu'à la partie supérieure de la coquille.

" La coloration est peu variable ; sur un fond d'un fauve pâle se montrent des marbrures, et souvent des flammules longitudinales, d'un brun plus ou moins foncé, suivant les individus. À la circonférence, où il existe une carène peu saillante, se montre une zone transverse d'un brun noirâtre, au dessous de laquelle on en voit deux ou trois autres beaucoup plus étroites qui entourent l'ombilic. Diam 40 mm." (*Deshayes*)

Hab India : Elephant Island (*Bélangier*), Western Ghats and Bombay (*Blanford*), Matheran (*Fairbank*).

93 *Cyclophorus koboensis*, *Godwin-Austen*

Cyclophorus (Glossostylus) koboensis, Godwin-Austen, Records Ind. Mus. viii, 1915, p 496, pl 38, fig 4

" Shell turbinate, keeled, umbilicus open, not concealed by the peristome. Sculpture carinate, as described, splashes and zigzags of darker tint, giving a mottled appearance. Colour madder-brown, with a distinct dark brown band below the keel, ochraceous white beneath. Spire conic, depressed, apex very fine. Suture impressed. Whorls nearly 6. Aperture circular. Peristome double, inner lip continuous, together thick and reflected. Columellar margin vertically rounded. Operculum flat, multi-spiral, the whorls about 6, defined by a raised thread-like spiral.

" Major diam 30-33, alt axis 12-15 mm " (*Godwin-Austen*)

Hab. India. Abor Hills, Kobo, on right bank of Tsanspu or Brahmaputra (*Kemp*) ; Rotung (*Oakes*).

“This species is remarkable for its flat, disk-shaped expanded peristome, usually of a bright orange or scarlet colour, and for the absence of marked sculpture, and, in most specimens, of any conspicuous coloration, except a single broad dark chestnut stripe below the periphery” (*Blanford.*)

Hab. Burma. Thayet Myo, Prome, and Henzada, Prov. Pegu (*Blanford.*)

Blanford refers to the fact that Theobald classes *C. patens* as a variety of *C. fulguratus*, but does not agree with this view. He states that both occur together at Thayet Myo and are very distinct, *C. patens* having a broad, rather thin disk-like expanded peristome, while the lip of *C. fulguratus* is much thicker but only moderately expanded. The former also is much smoother.

95. *Cyclophorus pearsoni*, Benson.

Cyclostoma pearsoni, Benson, A. M. N. H. ser 2, viii, 1851, p. 185, Pfeiffer, Conch.-Cab., Cyclostomaceen, 1854, p. 380, pl. 49, figs 34-36, Godwin-Austen, J. A. S. B. xiv, part 2, 1876, p. 173.

Ind. 1870, pl. 48, fig. 5, 1876, p. xv (not pl. 1, fig. 6), Theobald, Cat. Shells Brit. India, 1876, p. 36, Nevill, Hand. List, i, 1878, p. 271.

Cyclophorus (Glossostylus) pearsoni, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 107, id., Cat. Pneum. 1899, p. 19, Kobelt, Das Tierreich, Lief. 16, 1902, p. 116.

Original description —“Testa umbilicata, depresso-turbinata

lævigata, obsolete spiraliter striata, supra castaneo marmorata et late fasciata, subtus spiraliter castaneo-lineata, fascia alba ad periphæriam, subtus altera nigro-castaneo concurrente ornata; spira depresso-conoidea, apice acuto, anfractibus 5 convexiusculis, ultimo lato, subtus convexo, apertura vix obliqua, ampla, circulari, intus cærulescente, peristomate expanso, undique reflexo, læte aurantio, marginibus callo brevi junctis; umbilico subangusto, pervio, intus angustiori.

"Diam. major 42, minor 33, axis 25 mill." (*Benson*)

Hab. India. Khasi Hills, Assam (*Pearson*), Dafia Hills, Assam (*Godwin-Austen*); Tezpur (*Stoliczka*), Sylhet and Gauhati (*Nevill*); Lacat (*Theobald*).

"In form, sculpture, and markings *C. Pearsoni* much resembles, in the back view, the shell figured by Sowerby, no. 128, pl. 27, of the 'Thesaurus' as *C. perdrax*, but the spire is less acute. It differs otherwise in the narrower umbilicus, in the orange colour and rounded edge of the peristome (which is destitute of the flatness observable in *C. perdrax*), as well as in the amplitude of the aperture, convexity and want of keel in the whorls, and in the absence of the articulated band at the suture." (*Benson*)

Nevill mentions a var *minor*, from the Khasi Hills, as being smaller, with less open umbilicus, and more angulate periphery. He also refers to a peculiar small variety from Sylhet, which he does not name, with a much raised spire, the last whorl almost detached, and the periphery acutely keeled. This, however, can scarcely be considered a variety, and must rather be regarded as a monstrosity.

Var. *fuscicolor*, *Nevill*.

Cyclophorus pearsoni, var *fuscicolor* (*Godwin-Austen*), *Nevill*, *Hand List*, 1, 1878, p. 271, Kobelt, *Das Tierreich*, Lief 16, 1902, p. 116.

"A large variety with a trifle more open umbilicus and still more sombre coloration" (*Nevill*)

Hab. India Dafia Hills and Khasia Hills, Assam (*Godwin-Austen*).

Var. *subalabastrum*, *Nevill*

Cyclophorus fulguratus, *Hanley & Theobald*, *Conch. Ind* 1870, p. 2, pl. 3, fig. 3 (non Pfeiffer)

Original description.—"Shell depressed-conical, apex acute, solid, whorls six, rapidly increasing and rising into a pyramidal spire, depressed near the suture. In the early stages the whorls are acutely carinated; but at maturity the last whorl is round and girt with an obtuse, whitish rib, the surface is rendered somewhat rugose, by rather conspicuous lines of growth, and coarse revolving lines, which, as they cross the finer longitudinal lines, seem to run in zigzag. Prevailing colour above is dusky brown, clouded by yellowish spots of various sizes, which on the posterior whorls, are arranged in radiating zigzag series, a broad space around the umbilicus, which is very large and deep, is light straw color, with occasional revolving black lines or bands; aperture ample, somewhat wider than high, bluish within, peristome moderately reflected, rounded, of a beautiful carmine, or bright cherry-red color, not continuous, but embracing less than one fourth the preceding whorl, across which space passes a callus of the same red colour. Diameter 2 inches, height 1 inch" (*Gould*.)

Original description — "Testa medioenter umbilicata, solidiuscula, depresso-turbinata, striata, rugis confertissimis vix undulatis spiralibus superne decussata, basi glabra, saturnate castanea, baltea angusta mediana, superne laciniata, et periomphalo lato lacteis, anfractibus 5 convexis, celeriter accrescentibus, penultimo compressiusculo, ultimo rotundato, subtus convexo, ad suturam planulato, antice sensim descendente, apertura obliqua, ovato-circulari, intus lactea, peristomate expanso, inæqualiter incrassato-reflexo, albido, superne undato, inargimbus callo brevi, superne angulato, junctis, umbilico profundo, extus infundibuliformi Operculo — "

"Diam. major 40, minor 30, axis 20 mill "

Hab. Burma: Pegu (*Theobald*).

"Remarkable for its dark chestnut and milky-white bands, which recall, by their contrast and decuded boundaries, the colouring of *Helix hæmastoma*. A few white dots may be observed near the suture of the antepenultimate whorl. . . Perhaps the irregularity of the peristome may not be constant, but it is so conspicuous, that it has not been deemed advisable to omit it as a specific character." (*Benson*.)

105. *Cyclophorus beddomeanus*, *Preston*

Cyclophorus beddomeanus, Preston, Proc. Malac. Soc London, xi, 1914, p 21, text-fig

Original description — "Shell large, turbinata, with rather

acute apex, thin, yellowish, with one broad super-peripheral, blackish-brown band and a broad sub-peripheral band, immediately below which are two narrow bands of the same colour on the last whorl, the earlier whorls being reddish-brown, mottled with yellowish-grey, whorls 5, the last two rapidly increasing, sculptured with irregular lines of growth, crossed by rather broad, but flat, spiral ridges, the last whorl carinate at the periphery; suture incised, narrowly margined above, umbilicus moderately broad, deep labrum continuous, somewhat thickened, but not reflexed, crimson, aperture large, sub-circular, interior of shell glossy, smooth, polished, bluish, the colour-bands being visible through the test, opericulum laminiferous, with central nucleus, having about 8 convolutions. Alt. 44, diam. maj 53 75, min. 40 mm Aperture alt. 24, diam 25 mm" (Preston)

Hab. India Naga Hills.

A white-lipped variety is stated to occur also.

106. *Cyclophorus birmanus*, Pfeiffer

Leptopoma birmanum, Pfeiffer, Mon. Pneum 1852, p 117, id., Zeits. Malak vii, 1852, p 147; id, Cat Phaneropa. Bri Mus 1852, p 88; id, Mon Pneum Suppl 1, 1858, p. 76, Suppl 2, 1865, p 85, id, Suppl 3, 1875, p 134, Stoliczka, J A S B, xli, 1872, p 262 (*C. siamensis*, juv)

Cyclostoma birmanum, Pfeiffer, Conch-Cab, Cyclostomaceen, 1854, p 363, pl 47, figs 4-7

Cyclophorus birmanus, Adams, Gen Rec Moll ii, 1855, p 279.

Original description — "T perforata, globoso-conica, tenuis, acute carinata, oblique striata, lineis spiralibus obsoletissimis sculpta, parum nitida, diaphana, fusco-lutea, strigis latis angulatis et fasciis interruptis castaneis ornata, spira turbinata, obtusula, anfr 4½ convexiusculi, ultimus basi tumidus; apertura parum obliqua, subtetragona, intus cærulescens, margaritacea; perist. simplex, acutum, marginibus remotis, rectis (an serius reflexis?).— Operc. immersum, membranaceum, alutispirum, luteo-corneum.— Diam. maj. 14½, min. 12, alt 10 mill. ap verticaliter 8½ mill. longa, 7½ lata" (Pfeiffer)

Hab. Burma.

Stoliczka considered *C. birmanus* to be based on an immature specimen. The figure of the shell given by Pfeiffer hardly warrants this view, and I consider the best course to retain the species until better evidence is forthcoming as to its status

Cyclophorus flavilabris, Benson, A. M. N. H. ser. 3, vi, 1860, p. 193, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 68, Hanley & Theobald, Conch. Ind. 1870, pl. 1, fig. 1, Theobald, Cat. Shells Brit. India, 1876, p. 36, Nevill, Hand List, 1, 1878, p. 273.

Cyclophorus (Salpingophorus) flavilabris, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 109, id., Cat. Pneum. 1899, p. 21, Kobelt, Das Tierreich, Lief. 16, 1902, p. 129, id., Conch.-Cab., Cyclophoridae, 1, 1908, p. 650, pl. 93, fig. 5.

Original description.—"Testa umbilicata, subgloboso-turbinata, suboblique striata, striis confertis spiralibus decussata, castaneis, fascia saturatiore, sub altero angustiore albida peripherica, ornata, perioemphalo pallidiore; spira elevato-turbinata, apice vix acutiusculo, sutura impressa, superne marginata; anfractibus 5, convexis, ultimo antice sensim breviter adnato, superne extus angulato, expanso, crassiusculo, flavo, margine collumellari latiore, sub-revoluto, umbilicum angustum leviter celante. Operc. —?"

"Diam. major 51, minor 43, axis 36 mill." (*Benson*)

Hab. Burma. Pegu (*Theobald*); Arakan (*Stolachka, Theobald*).

112 *Cyclophorus fultoni*, Godwin-Austen & Beddome.

Cyclophorus fultoni, Godwin-Austen & Beddome, A. M. N. H. ser. 6, xiii, 1894, p. 508.

Cyclophorus (Salpingophorus) fultoni, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 109, id., Cat. Pneum. 1899, p. 21, Kobelt, Das Tierreich, Lief. 16, 1902, p. 129.

Original description.—"Shell somewhat depressedly turbinate, rather widely umbilicated, periphery rounded, sculpture nearly smooth, under a lens a fine, close, oblique, vertical striation is apparent, which is obsoletely decussated with delicate spiral lines. Colour a uniform dark ruddy brown or madder-brown above and on the sides, but several narrow and two or three broader dark longitudinal bands are distinguishable in a strong light, pearl-white beneath. Whorls 5, the last very large, rather suddenly increasing towards the aperture, the last three apical whorls rising suddenly, suture shallow, aperture wide, nearly circular, a little higher than broad, oblique, peristome continuous, rather thickened, slightly reflected, pale yellowish, columellar margin rounded, operculum of the same colour as the shell, having 5 or 6 acutely defined volutions, the interspaces with the usual oblique lines of growth.

"Maj. diam. 49, min. diam. 43; alt. axis, max. 20, min. 19 mm."

Hab. India. Khasi Hills, Assam.

"The affinity of this beautiful species is with *C. siamensis*, from which it differs in its more depressed form and more oblique aperture, and especially in the coloration. The exact locality is

not known; the Khasi Hills is a large tract, and many species found on the northern slopes draining to the Brahmaputra are not found on the south side, while intervening is a high plateau with a very scanty number of land-shells." (*Godwin-Austen & Beddome*)

Fig 14—*Cyclophorus fultoni*

The specimen figured is in the Beddome collection now in the possession of Mr. Leman. It is smaller than the type, measuring major diam. 43, min 34, axis 28 mm, and is in better condition than any I have seen. The species appears to vary considerably in size, a specimen in my own collection received from a native collector in Assam in 1899 measuring 47 × 37.5 in diameter.

113. *Cyclophorus haughtoni*, *Theobald*

Cyclophorus haughtoni, Theobald, J A S B xxvi, 1857, p 246; Hanley & Theobald, Conch Ind 1870, pl 1, fig 3, pl 3, fig 6, pl 48, fig 6, 1876, p xv, Theobald, Cat Shells Brit India, 1876, p 36, Nevill, Hand List, i, 1878, p 270, Tapparone-Canevari, Ann Mus Civ Genova, ser 2, vii, 1889, p 308

Cyclophorus nicobarius, Pfeiffer, Malak. Bl. xxiv, 1877, p. 147

Original description.—"T. anguste umbilicata, trochiformis, solida, oblique striata, strusque, spiralibus confertissimis sub lente decussata, sericina, fulva, albo-guttulata; spira conica, acutiuscula; sutura carino-marginata, anfr. 5 modice convexi, ultimus ad basin subacute carinatus, basi subplanatus, apertura diagonalis, truncato-auriformis; perist. carneum, incassatum, vix expansiusculum, marginibus vix callo junctis, dextro ad insertionem flexuoso,

Fig. 16 — *Cyclophorus nicobaricus*

columellari umbilicum semitegente, versus basin callum denticulatum gerente.—Operc. tenue, rubello-corneum.—Diam. maj. 17, min. 15, alt. 13 mill. Ap. 9 mill. alta" (Pfeiffer)

Hab. Nicobar Islands. Pulo Panjang (Reinhardt, Dürcksen).

The species is now figured for the first time from a specimen in the Beddome Collection, it measures .155 × .1375 mm. in diameter, alt. 15 mm.

In the British Museum I found three specimens received from the Copenhagen Museum in 1866, labelled *Cyclophorus helicoides*, Yoldi, Little Nicobar, Galathea Expedition. Now the only species mentioned in the Yoldi Catalogue under that name is Grateloup's, which belongs to a *Leptopoma*. The specimens in question differ from *C. nicobaricus* only in size, measuring diam. maj. 20, min. 18.5, alt. (incl. apert.) 21 mm. They may be referred to as var. *major*, nov. One specimen has the umbilicus a little less covered by the columellar margin of the peristome.

Genus *AULOPOMA*, Troschel

Original description. — "Testa crassiuscula, suborbiculari, superne depressa, pallida, castaneo-undulata, spiræ brevī; anfractibus quinis, striatis, stius ex sutura profunda radiantibus; ultimo auctu prope aperturam disjuncto, antice inclinato, umbilico lato, profundo, operculo corneo, tenui, spirali, externe posito, marginem aperturæ excedente.

"Largeur 0.015; hauteur 0.009. [22 × 18 × 11 mm.]

"Cette espèce, qui se rapproche un peu des *C. substratum* et *C. planorbulum* des auteurs anglais, n'a rien de bien remarquable si ce n'est la singularité de son opercule, qui est tout à fait extérieur, dépassant l'ouverture et dont les bords sont reçus dans un petit canal — Cet opercule corné, assez fragile, a l'aspect d'un planorbe déprimé. C'est le premier exemple qui soit parvenu à notre connaissance d'un opercule extérieur, et dans lequel vient s'emboîter le bord de l'ouverture" (*Guérin-Ménéville*.)

Steganotoma, Troschel, *Arch. Naturg* iii, part 1, 1837, p. 163

Type, *Pterocyclos rupestris*, Benson.

Range. India, Farther India, Ceylon, Southern China, Malaysia
Shell discoid, somewhat convex above, concave below, and widely umbilicated; whorls cylindrical, slightly adhering together, and visible on both sides. Sutures channelled. Peristome reflected, interrupted at the summit of the aperture by an oblique sinus. Outer lip furnished, at the upper part, with an arched wing, which overhangs the sinus. Wing broad, tumid, bending downwards and mucronate in front, adhering to the penultimate whorl. Operculum multispiral, convex outside, the edges of the whorls slightly raised, concave inside.

137. *Pterocyclus aborensis*, *Godwin-Austen*.

Pterocyclus aborensis, Godwin-Austen, Rec Ind Mus. viii, 1915, p 498, pl 39, fig 1.

"Shell subdepressedly turbinate, very openly umbilicated. Sculpture, epidermal lines of growth strong. Well raised distant spiral liræ, both on upper and lower side. The one next the suture the most conspicuous, with two less pronounced intervening, about 14 altogether. Colour a rich umber-brown. Spire subconoid, apex small. Suture deep. Whorls 5, regularly increasing, angulately rounded on periphery. Aperture circular. Peristome double, not thickened, slightly reflected, inner lip continuous, the outer expanded forward at inner angle into a half closed spout-shaped wing. Columellar margin subvertically curved. Operculum not seen.

"Major diam 26 0, alt axis 10 0 mm" (*Godwin-Austen*)

Original description:—"Forma typica. Testa albida, epidermide flavescens sive castanea, decidua vestita, castaneo-fasciata. Peristomate duplici, antice valde expanso. Operculo intus concavo, extra planiusculo, margine valde radiate hirsuto.—Lat. 1.20, lat. oris intus 0.65." (Theobald.) [31 × 25 × 14 mm.]

Hab. India: Shan States (Blanford).

Var. *planorboides*, G. Nevill.

Pterocyclus insignis, var. *planorboides*, Nevill, Hand List, 1, 1878, p. 261, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxxi, 1899, p. 135, id., Cat. Pneum. 1899, p. 102.

Original description:—"The spire is actually sunken in this remarkable Planorbis-like form, the last whorl is more compressed, the aperture smaller, and the umbilicus more open and shallow than in the type form. The excavated suture is common to both." (Nevill.)

Hab. Burma: Kakhien Hills (Anderson).

150. *Pterocyclus magnus*, Godwin-Austen

Pterocyclus magnus, Godwin-Austen, J A. S. B. xlv, part 2, 1876, p. 174, pl. 7, fig. 3.

Pterocyclus magnus, Nevill, Hand List, 1, 1878, p. 261, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 113, id.,

Cat. Pneum. 1899, p. 25, Kobelt, Das Tierreich, Lief. 16, 1902, p. 166, id., Conch.-Cab., Cyclophoridae, II, 1910, p. 753, pl. 112, figs. 3, 4.

Original description — "This shell is similar in form to *P. parvus*, only that the winged portion of the peristome is far more fully developed and folded round into a perfect, largely developed tube with its internal orifice just within the aperture, the inner lip being deeply notched to give room for it. The shell is ornamented with a single black peripheral band and with minute transverse brown zig-zag markings. Apex very flat. Whorls 5, rounded.

"The largest example measures—alt. 0.26 [6 mm], major diam. 0.95 [24 mm], minor diam. 0.75 [19 mm], apertural tube 0.20 inch [5 mm]" (*Godwin-Austen*.)

Hab. India. Daffa Hills, Naga Hills, Assam (*Godwin-Austen*).

The following additional details are given by Nevill, who considered it doubtfully more than a well-defined variety of *P. parvus*. The compressed last whorl, which is semi-detached at the proportionately smaller aperture, the more open umbilicus and the different character of the "tube" distinguish this form from the large variety of *P. parvus*.

Pterocyclus magnus, var.

Pterocyclos magnus, var., Godwin-Austen, Rec. Ind. Mus. VIII, 1915, p. 500.

"A single specimen, with peristome not quite perfect and surface in poor condition, was sent me by officers of the Survey with the Mimi Mission. It comes nearest to the above Daffa Hill shell in general form, the markings differ considerably. Major diameter 24.75. It should be looked for again" (*Godwin-Austen*.)

151. *Pterocyclus marionæ*, *Preston*.

Pterocyclus marionæ, Preston, Proc. Malac. Soc. XI, 1914, p. 22, text-fig.

Original description — "Shell somewhat orbicular, moderately depressed, covered with a thin, laminiferous, reddish-brown periostracum; whorls $4\frac{1}{2}$, regularly increasing, the last very obtusely angled at the periphery, and possessing a short, but rather broad, wing-like development just behind the labrum, suture very deeply impressed; umbilicus wide, deep; labrum reflexed, white, laminiferous, continuous but for a slight break below the wing-like projection, aperture circular, operculum corneous, convex above, with central nucleus, bearing several raised, more or less foliaceous laminæ, which are especially strong towards the outer margin, below concave, polished, shining. Alt. 8, diam. maj. 20, min. 15 mm. Aperture alt. 7, diam. 7 mm" (*Preston*.)

Hab. India: Naga Hills.

152. *Pterocyclus miriensis*, *Godwin-Austen*.

Pterocyclus miriensis, Godwin-Austen, Rec. Ind. Mus. vii, 1915,
p. 498, pl. 39, fig. 2

"Shell depressedly discoid, very widely umbilicated. Sculpture very strong, regular spiral liræ, above and below. Colour rich burnt sienna brown. Spire very flatly conic. Suture well impressed. Whorls 5, subangularly rounded on the periphery. Aperture circular, subvertical, just shows above the last whorl. Peristome double, not thickened, slightly reflected, inner lip thin, continuous, the outer expanded into a wing, openly spout-shaped. Columellar margin well rounded

"Major diam 30.0, alt axis 8.0 mm" (*Godwin-Austen*.)

Hab India. Miri Hills

153. *Pterocyclus nanus*, *Benson*

Pterocyclus nanus, Benson, A. M. N. H. ser. 2, viii, 1851, p. 450; Pfeiffer, Mon. Pneum. 1852, p. 47, id., Conch.-Cab., Cyclostomaceen, 1854, p. 388, p. 388, pl. 49, figs. 31-33, Adams, Gen. Rec. Moll. u, 1855, p. 277; Reeve, Conch. Icon xiv, 1863, *Pterocyclus*, pl. 3, fig. 12; Blandford, J. A. S. B. xxxv, 1866, pp. 38 & 40, Hanley & Theobald, Conch. Ind. 1870, pl. 49, figs. 5, 6, Theobald, Cat. Shells Brit. India, 1876, p. 38.

Pterocyclus nanus, Nevill, Hand List, i, 1878, p. 262, id., J. A. S. B. l, 1881, p. 146, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 114 (*nanus*, err. typ.), id., Cat. Pneum. 1899, p. 28 (*nanus*, err. typ.); id., Nachr. Deuts. Malak. Ges. xxxi, 1899, p. 136, id., Cat. Pneum. 1899, p. 102, Kobelt, Das Tierreich, Lief. 16, 1902, p. 167, id., Conch.-Cab., Cyclophoridae, u, 1909, p. 730

Original description—"Testa profunde perspective umbilicata, depressa, discoiden, albida, fascia media strigisque undulatis castaneis superne ornata; spira prominula, saturatiore, anfractibus $4\frac{1}{2}$ convexis, ultimo supra soluto, apertura obliqua, circulari; peristomate duplicata, marginibus sulco leviter impresso vix discretis, interno superne profunde recteque inciso, externo reflexiusculo, supra sinum alam angustam fornicatam, apice breviter descendente, angulatam, formante.

"Diam. major 10, minor 8, alt. 5 mill."

Hab India: Nilgiris (*Jerdon*); Anamullay (*Beddome*); Southern India (*Stoliczka*); ? Salem (*Nevill*).

"Possessing a similar deep umbilicus, narrower than in the other known species, it was overlooked as a young and imperfect specimen. On examination it proves to have arrived at its full growth, being allied in the characters of the aperture to *Pt. rupestris*, nobis, but differing from the smallest varieties of that shell not only in size and in the form of the umbilicus, but also in the less curvature of the incision under the wing, which is moreover less expanded, and does not touch nor cover any part of the preceding whorl. The operculum is unknown." (*Benson*.)

Var *applanata*, G. Nevill.

Pterocyclus nanus, var. *applanata*, G. Nevill, J. A. S. B. 1, 1881, p. 146; Kobelt, Das Tierreich, Lief 16, 1902, p. 167.

Differs from the type in being rather more richly painted, with more flattened spire, more slowly increasing whorls, and slightly more open umbilicus.

Diam. 13.75, alt 7 mm.

Hab India: Southern India (*Stoliczka*), ? Salem (*Nevill*).

Var *reflexilabris*, G. Nevill.

Pterocyclus nanus, var. *reflexilabris* (? distinct species), G. Nevill, J. A. S. B. 1, 1881, p. 146; Kobelt, Das Tierreich, Lief 16, 1902, p. 167.

Pterocyclus nanus reflexilabris, Kobelt, Conch.-Cab, Cyclophoridae, 11, 1910, p. 764.

"A white apparently colourless form, with black apex and easily distinguished from the preceding [*nanus*], as well as *Pter. cyclophoroides*, by the fragile, broadly reflected and duplex peristome, rather differently shaped too above, the operculum, in my single specimen, agrees with what I take to be the typical form; it is very little raised or concave . . . Mr Blanford also possesses two specimens" (*Nevill*).

Hab. India: Khoondah Hills (*Pirie*); Nilgiri Hills (*Blanford*).

158. *Pterocyclus spiramentum, Godwin-Austen.*

Pterocyclos spiramentum, Godwin-Austen, Rec. Ind. Mus. viii, 1915, p 499, pl 40, fig 4.

"Shell openly umbilicated, depressedly orbiculate, somewhat globose. Sculpture, only fine epidermal lines of growth. Colour dark sienna-brown, crossed by dark bands, running from the suture to the narrow black periphery band. Spire slightly raised, very depressedly conoid. Suture deep. Whorls 4, the last rapidly increasing. Aperture circular, subvertical. Peristome slightly reflected, not much thickened, the outer lip is expanded near the suture, with sides turned in forming a spout-like projection. Close behind this and adjacent to the suture is an apparent tube, but it is rather of gutter form, semicircular in section, and is given off from a cleft on the columellar side just within the aperture, which is not an orifice—if it were so the gutter would be a true tube and the shell a *Spiraculum*. It illustrates how the sutural tube in that genus has originated. This species is on the borderland of the two genera *Pterocyclos* and *Spiraculum*. It must be put in *Pterocyclos*, because the tube is close to the aperture, almost a part of the peristome. In *Spiraculum* the tube is remote from the aperture. Operculum concave in centre, multi-spiral, suture not raised

"Major diam. 15.0; alt. axis 4.75 mm." (*Godwin-Austen*)

Pearsonia andersoni, Kobelt, Conch.-Cab., Cyclophoridae, ii, 1911, p. 766, pl. 112, figs. 10, 11.

Original description.—"Testa late umbilicata, depressa, discoidea, oblique striata, lineis elevatis minutis spiralibus superne et præsertim juxta peripheriam, sed non circa umbilicum, confertissime decussata, albide, strigis castaneis fulguratibus radiantibus picta. Spira plana, apice vel plano vel vix exsertusculo, sutura profunda. Anfr. $4\frac{1}{2}$, teretes, ultimus versus aperturam longe descendens, 5-6 mill. pone peristoma tubulo suturali reverso parvo, arcuatim recurvato vel subrecto et libero, 2-3 mm. longo munitus. Apertura diagonalis rotunda; peristoma continuum, duplex, internum expansiusculum undique appressum, postice juxta anfractum penultimum profunde angulatum sinuatum, externum expansum, supra sinum dilatatum, juxta anfractum penultimum instar cuculli plani porrectum. Operc. persimile ei *Sp. hispida*, corneum, intus concavum, extus convexum, marginibus anfractuum, præsertim externorum, lamellatim liberis, apice planiusculo.

"Diam. maj. $15\frac{1}{2}$ -17, min. 12- $13\frac{1}{2}$, axis 5-6, apert. diam. intus 5 mm" (*Blanford*)

Hab. Burma. Bhamo and right bank of Irrawaddy (*Anderson*).

"Distinguished from *Sp. avanum*, W. Blanford, by its more oblique mouth, differently shaped and more expanded peristome, by the horizontal cowl-shaped projection running forwards along the last whorl instead of being vertical, the greater distance of the sutural tube from the mouth, and the much more convex operculum" (*Blanford*)

161 *Pearsonia assamensis*, *Fulton*.

Spiraculum assamense, *Fulton*, Nautilus, xiv, 1900, p. 87.

Original description:—"Shell discoidal, flat above, very broadly umbilicated, dark brown with a few oblique stripes of a lighter color, encircled by four rows of hairs arranged in tufts, one being at the periphery, one above, and two below, the latter two are often worn off in older specimens, whorls $4\frac{1}{2}$, slightly convex above, last rounded, tube erect, short, inclined towards the apex, situated 2 mm from the margin of the aperture; peristome white, somewhat thickened, bordered by a narrow flange; aperture oblique, circular, operculum shelly, whorls 5.

"Diam. maj. 14 mm., min. 12 mm., alt. 5 mm." (*Fulton.*)
Hab India. Khasi Hills, Assam.

Fig 18—*Pearsonia assamensis* ($\times 2$)

"In most respects this species is very like *nagaense*, Aust. & Bedd, but can be easily separated by the position of the breathing tube, which in *assamense* is much nearer the aperture. The operculum of *nagaense* does not appear to have so many whorls as our species, a large part of the central portion being quite flat and smooth. These characters appear to be constant in the numerous specimens I have examined of both species" (*Fulton.*)

The accompanying illustration is from the type in the British Museum.

Original description:—"Shell white, subdiaphanous, upper surface of the body-whorl slightly patched with rufous. Epidermis dark brown, covered with short, bristly hairs, which at the outer and under side of the whorl are placed thickly together, giving an appearance to the shell of its being zoned with three narrow dark lines, whorls five, breathing tube one line in length, conical, compressed, pointing backward and inward; mouth circular, lip thickened and reflected.

"Diameter 1 inch.

"Operculum corneous, formed of several spiral layers, deeply cupped at the outer surface, and plano-convex at the inner." (Pearson.)

(No locality given)

Hab India: Patharghata, in Behar (Benson); Teria Ghat (Theobald).

Col Godwin-Austen mentions a var *minor*,* from Dihiri, Parbat, Dada Hills, which agrees with the specimens from Teria Ghat.

167. *Pearsonia kempii*, Godwin-Austen.

Spiraculum kempii, Godwin-Austen, Rec. Ind. Mus. viii, 1915, p. 496, pl. 39, figs 4, 5

"Shell flatly discoid, widely umbilicated. Sculpture close, epidermal lines of transverse growth both above and below, conspicuous close spiral l^{re}s with every 2nd and 3rd somewhat stronger—in the type 2nd much more conspicuous on the central line of the last whorl, producing an angulate upper surface. Colour rich umber-brown, very indistinct transverse colouring, and a broad peripheral band. Spire very low, only just raised above the last whorl. Suture deeply impressed; the sutural tube is 9 mm. behind the peristome, extremely short, and does not appear to grow longer, it is of small diameter. Whorls 5, rounded on periphery. Aperture circular. Peristome white, thickened, double, reflected, the outer lip forming a low ridge behind the expanded inner lip, thus forming the short open descending wing. Columellar margin rounded. Operculum roundly convex, the whorl in double filaments distinctly raised, close and smooth at centre

"Major diam. 26.5, alt. axis 7 mm. (Largest 300 Ponging.)" (Godwin-Austen)

Hab. India: Abor Hills (Oakes).

"This is very close to the next species [*Sp. planum*] found by Mr. Kemp, but which in a few minor characters differs too much to be considered the same, unfortunately there are only two very old bleached specimens of it" (Godwin-Austen.)

168. *Pearsonia luyorensis*, Godwin-Austen.

?*Spiraculum luyorensis*, Godwin-Austen, Rec. Ind. Mus. viii, 1915, p. 500, pl. 40, fig. 5.

"Shell openly umbilicated, orbiculate, very depressed. Sculpture, a smooth epidermis, lines of growth very fine and close. Colour a very rich dark madder-brown, broad dark bands close set, cross the third whorl transversely. There is a narrow peripheral band. Spire very low, apex just showing above the plane of the

* J. A. S. B. xlv, part 2, 1876, p. 174.

last whorl Suture impressed, the sutural tube close behind the aperture, 3 mm distant, 3 mm in length and curving backwards. Whorls 4, the last expanding rapidly. Aperture circular, sub-vertical. Peristome double, not very thickened, slightly reflected, at the suture, the outer lip is extended forward into a long spout resting on the periphery.

"Major diam. 18.75; alt. axis 4.8 mm" (Godwin-Austen.)

Hab. India: Luyor, Abor Hills (Oakes)

"This is close to *Pterocyclos spiramentum*, but is distinct in its much flatter apex, and far wider umbilicus. The peristome presents a stage further towards, and has reached the development of *Spiraculum*, rendering it a more than usually interesting species." (Godwin-Austen.)

169. *Pearsonia mastersi*, Hanley & Theobald

Pterocyclos (*Spiraculum*) *mastersi* (Blanford MS), Hanley & Theobald, Conch. Ind. 1870, p. 3, pl. 5, fig. 1

Pterocyclos (*Spiraculum*) *mastersi*, Nevill, Hand. List, i, 1878, p. 263

Spiraculum (s. str.) *mastersi*, Kobelt & Mollendoiff, Nachr. Dents. Malak. Ges. xxix, 1897, p. 114, id., Cat. Pneum. 1899, p. 20.

Pearsonia (*Pearsonia*) *mastersi*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 114.

Pearsonia mastersi, Kobelt, Conch.-Cab., Cyclophoridae, ii, 1911, p. 769, pl. 113, fig. 9.

"Testa latissime umbilicata, depressa, epidermide crassiuscula, fusca, scabra, decussato-subcostulata induta, atque iris tribus pilosis, una juxta peripheriam, altera supra, tertia infra, circumdata; sub epidermide alba, fascis angulatis transverseis castaneis notata, lineis incrementi confertis hisque spiralibus minutis magis distantibus decussatim ornata. Spira fere plana, apice vix emersa. Anfr. 5, rotundati, ultimus antice longe solutus, valde descendens, paulo ante solutionem tubulo brevi, curvato, pervio, longitudinaliter striato, ad anfr. penultimum excurrente, antice compresso, in rimam apertam intra anfractum ultimum desinente, postice tereti, extus patente, 6-8 mill. pone aperturam oriente, inunitus. Apertura diagonalis, circularis; peristoma incrassato-expansum, subduplex, superne in rostrum subtubuliforme, antice porrectum, excurrente. Operculum corneum, intus concavum, extus convexum, marginibus anfractuuum liberis lamellisferis."

"Diam. maj. peristomate incluso 24, min. 16½, alt. 5, ap. diam. intus 6 mill." (Blanford.)

Hab. India: Golaghat, Naga Hills (Masters).

"This shell differs from all other known forms of *Spiraculum* by having the last whorl free and descending for a considerable distance, and by having, besides the sutural tube, a projection,

frequently of a subtubular form, from the top of the peristome. The shell has some resemblance to *Rhiostoma*, and still more to *Opisthoporus birostris*" (Blanford.)

170. *Pearsonia minima*, Godwin-Austen.

Spiraculum minimum, Godwin-Austen, Rec. Ind. Mus. viii, 1915, p. 501, pl. 40, fig. 2.

"Shell orbiculate, depressed, widely umbilicated. Sculpture, fine transverse lines of growth on the epidermis. Colour dull ochraceous, with a green tinge, 3rd and last whorls crossed by irregular broadish brown bands, indication of a band just below the periphery. Spire depressed, but apex well above last whorl. Suture impressed, the tube short, close behind the aperture, only 2 mm. distant. Whorls 4, regularly increasing. Aperture circular, with very slight angulation at sutural margin. Peristome double, both inner and outer lips continuous, moderately thickened and slightly reflected.

"Major diam 9.2; alt axis 3.25 mm" (Godwin-Austen.)

Hab. India: Jeku, Abor Hills (J. Coggin Brown).

"Lt. G. F. T. Oakes, R.E., has sent me seven examples of this species from Sibbum, far finer in size; four are bleached. The largest measures 10 mm. in major diameter. Three are perfect with strong epidermis. Colour sienna-brown in tint with ochraceous mottling, with an indistinct peripheral band. Major diam. 11.5 mm.

"This is a close ally of *Spiraculum kempri*, but the closely mottled zig-zag pattern and black peripheral band is not seen in that species; in this respect it is similar to *Spiraculum nevillei* of the Daffa Hills; it is smaller and rather flatter than that shell.

"It is hardly possible to find better examples showing the development of the sutural tube in *Spiraculum* than in the species figured on plate xl. Although it is not from the Tsanspu Valley but from the source of the Iriawady, *Spiraculum putaoensis* has been introduced in order to show how close is the relationship and how beautiful evolutionary stages have been. In having a tube on the suture behind the peristome and a simple peristome, both belong to the genus *Spiraculum*. In figures 2c and 3b, within the aperture may be seen the little orifice having a connection with the branchial sac. In *Spiraculum minimum* this is very close to the aperture, in *Spiraculum putaoensis* it is more remote. In the first the inner and outer lips of the peristome are united and thickened at the upper inner margin next the suture, while in the second there is further development; a clear separation of the lips has taken place, the inner has a slight nick on the line of the suture, shown by a sort of cicatrice up to the branchial orifice, and the outer lip is expanded forward into a short scoop-like process corresponding to the wing, as it has been called, of *Ptenocyclus*. The next species (fig. 4) [*P. spiramentum*] might

be placed in this genus and is a true link with it. The tube is so far forward, it still forms a part of the peristome, a complete isolated orifice has not yet been formed—it is a slit; the process of its further development would be the growing more forward of the whorl itself. In fig. 5, *Spiraculum luyorensis*, we find this stage reached, and in fig. 5 b the internal orifice has been left behind, and externally a perfect tube is seen on the suture (fig. 5 a) behind the aperture and completely separate from it. While this evolution has been in progress, another change has taken place; the scoop in fig. 4 has grown forward considerably into the elongated gutter of fig. 5, with its edges growing inwards and nearly touching, corresponding in life, in all probability, with a sharp fold of the mantle edge, which with further growth might become more and more tube-like." (Godwin-Austen.)

171. *Pearsonia nagaensis*, Godwin-Austen & Beddome.

Spiraculum nagaense, Godwin-Austen & Beddome, A M N II. ser 6, xiii, 1894, p. 509

Spiraculum (s. str.) *nagaense*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 135, id., Cat. Pneum. 1899, p. 103

Pearsonia (*Pearsonia*) *nagaensis*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 174

Pearsonia nagaensis, Kobelt, Conch.-Cab., Cyclophoridae, 11, 1911, p. 771, pl. 113, figs. 12, 13

Original description:—"Shell discoidal, upper surface flat, widely umbilicated, sculpture, strong longitudinal striation, covered with a thick epidermis, with two parallel bands of close set hairs on the periphery. Colour umber, with a series of darker bands crossing the whorls. Spire quite flat; suture deep, the sutural tube is 4.5 mm. behind the peristome, is well developed, arched and bending over, and lies directed backwards and parallel with the suture, whorls 5, rounded, the last descending very slightly, aperture circular; peristome thickened, white, continuous, with an angulate notch above and close to the body-whorl; operculum widely spiral, shelly, whitish grey.

"Maj. diam. 17.5, min. 14.0; alt. axis 5.25 mm." (Godwin-Austen & Beddome.)

Hab. India: Maokokchung, Naga Hills (*Muspratt*)

"This small form may be distinguished from *S. hispidum*, var. *minor*, of Teria Ghat in the Khasi Hills and base of the Daffa Hills, in the form and direction in which the sutural tube lies backward on the shell, in *hispidum* it lies across and nearly at right angles with the suture, in this new form it is on the line of the suture" (Godwin-Austen & Beddome.)

172. *Pearsonia nevilli*, Godwin-Austen.

Spiraculum nevilli, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 174, pl. 7, fig. 2

Pterocyclos (*Spiraculum*) *nevilli*, Nevill, Hand List, 1, 1878, p. 264.
Pearsonia (*Pearsonia*) *nevilli*, Kobelt, Das Tierreich, Lief. 16, 1902,
 p. 174.

Pearsonia nevilli, Kobelt, Conch.-Cab., Cyclophoridae, 11, 1911,
 p. 765, pl. 112, figs 1, 2.

Original description.—"Shell discoidal, convexly depressed, widely umbilicated, covered with a dark brown epidermis which soon becomes eroded, and with an incipient dark band on the keel in perfect specimens. Spire very slightly raised, suture deep, whorls 5, much rounded, the last descending slightly towards the aperture. The sutural tube is only 0.10" [2.5 mm.] in length, 0.3" [7.5 mm.] behind the aperture, turns back, and is situated close to the suture. Aperture oblique, circular. Peristome double, inner lip continuous, having at the suture a re-entering angular notch, the outer is similarly notched and then expanded and folded into a spout-shaped form. Operculum not seen, probably as in *S. hispidum*.

"Alt 0.36 [9 mm.], major diam 1.05 [26.5 mm.], minor diam. 0.92 [23.5 mm.], apert. 0.45 in [11.5 mm.]"

Hab. India. Dihiri Parbat, Daffa Hills, Assam (*Godwin-Austen*).

"This *Spiraculum* is quite distinct from *S. hispidum*, for which I mistook it when found, and consequently omitted to search for more examples. In the form of the sutural tube it most nearly resembles *S. avanum* W. Blt., thus differing very considerably from *S. hispidum*, in which that part is broad and curves quite over and across the suture in well-grown shells. The most notable point of difference, however, is the expansion of the outer lip into a tube-like process, in which respect the species shews its very close affinity to the genus *Pterocyclos*." (*Godwin-Austen*.)

Pearsonia nevilli, G.-A., var.

Spiraculum nevilli, var. *Godwin-Austen*, Rec. Ind. Mus. viii, 1915, p. 497.

"Shell very openly umbilicated, discoid. Sculpture, close spiral liration, accentuated at the middle half of the whorl looking at it from above. Colour dark madder-brown, mottled or rather streaked closely with ochre bands which, as they approach the apex, are closely zig-zagged, beneath plain. A distinct black band on the periphery. Spire very flat. Suture impressed. Whorls 5, regularly increasing. Aperture circular, oblique. Peristome double, thickened, much reflected, expanding forward near suture into a spout-like shape, which continues as a raised, pronounced narrow ridge on the reflected whorl, the epidermis being peculiarly shining. A little further development would constitute this a tube, such is its appearance. Operculum multi-spiral, about 10 whorls, the edges slightly raised and furred on outer margin."

"Major diam. 21.5, alt axis 5.0 mm. (Type immature, 1st received.) Major diam. 22.5, alt. axis 9.5 mm. (full-grown example)." (*Godwin-Austen*.)

Hab. India. Abor Hills.

***Pearsonia nevilli*, *G.-A.*, var.**

Spiraculum nevilli, var, *Godwin-Austen*, *Rec. Ind. Mus.* viii, 1915, p. 497.

"The wing or spout is not so long in typical *nevilli* from the Daffa Hills, and the last whorl near the aperture descends much more than in this Abor shell, otherwise they are very close in form. The Abor shells are not so very much mottled, but have a distinct band, and they are much smaller.

"Major diam. 23.25; alt. axis 4.8 mm." (*Godwin-Austen*)

Hab. India: Luyor, Abor Hills (*Oakes*).

173. *Pearsonia oakesi*, *Godwin-Austen*.

Spiraculum oakesi, *Godwin-Austen*, *Rec. Ind. Mus.* viii, 1915, p. 496, pl. 39, fig. 3.

"Shell depressedly discoid, widely umbilicated. Sculpture close, fine transverse lines of growth in the epidermis, no spiral ribbing. Colour: ground grey white, crossed by regular bands of brown, zig-zag below, merging into a narrow dark peripheral band, from which zig-zag lines are given off on the basal side. Spire scarcely raised above the last whorl. Suture well impressed, the sutural tube very long, 7 mm, narrow, set obliquely backward, nearly reaching to the apical whorl. Whorls 5, regularly increasing. Aperture circular. Peristome continuous, thickened, reflected at the upper inner angle, expanded forward from above and below, horizontally upon the median line of the penultimate whorl forming a narrow slit. Columellar margin rounded. Operculum multi-spiral, slightly concave, smooth at centre, edges of the outer whorls distinct and slightly raised.

"Operculum multispiral, edges of suture slightly raised, concave in centre.

"Major diam. 26.0; alt axis 5.5 mm."

Hab. India. Abor Hills (*Oakes*).

"Five specimens of this beautiful species came to hand; it does not recall any species as yet found in Assam or Burma." (*Godwin-Austen*)

174. *Pearsonia plana*, *Godwin-Austen*.

Spiraculum planum, *Godwin-Austen*, *Rec. Ind. Mus.* viii, 1915, p. 497, pl. 39, fig. 6.

"Shell similar to *S. kempi*. Sculpture, rather coarser spiral

ribbings. Colour bleached. Spire very low, the apex scarcely showing above the last whorl. Suture deeper. Sutural tube only 6.5 from the peristome, it is 4 mm. long and sharply recurved backward. Whorls 5. Aperture circular. Peristome double, thickened, outer lip expanding into a somewhat lengthened open wing, ascending on the whorl next it, not descending as in previous species.

"Major diam. 30.0, alt. axis 6.0 mm."

Hab. India: Upper Rotung, Abor Hills, Upper Rotung; Yembung (*Kemp*).

"A single small variety, bleached, only 28 mm in major diameter, was sent to me from the Miri Hills." (*Godwin-Austen*.)

175. *Pearsonia putaoensis*, *Godwin-Austen*.

Spiraculum putaoensis, *Godwin-Austen*, *Rec. Ind. Mus.* viii, 1915, p. 500, pl. 40, fig. 3

"Shell widely umbilicated, orbicularly depressed. Sculpture, fine regular transverse striæ of growth. Colour, bleached, and epidermis gone; zig-zag streakings at regular intervals cross the whorls from the suture outwards. Spire scarcely raised above the last whorl. Suture impressed, the tube $4\frac{1}{2}$ mm., behind the aperture, a mere orifice, but in the perfect shell there may be a tube. Whorls 4, increasing regularly. Aperture circular, oblique. Peristome double, inner and outer lips continuous, the inner with a slight notch near sutural margin, the outer expanded into a wing or spout.

"Major diam. 14.0; alt. axis 4.0 mm."

Hab. Burma: Putao, Upper Burma (*Capt. E. O. Morris*).

"The habitat of this species at the head of the Irrawady valley (not a very far distant one from the Tsanspu) is interesting and I have introduced it here because in the sutural tube it approaches a species found in the Abor Hills, which I next describe as *Spiraculum minimum*, and is much smaller. It also recalls *Spiraculum andersoni*, Blf., from Bhamo, but this is more openly umbilicated, the wing similar." (*Godwin-Austen*)

176. *Pearsonia simplex*, *Nevill*.

Pterocyclus (Spiraculum) mastersi, var. *simplex* (P distinct species), *Nevill*, *Hand List*, i, 1878, p. 263.

Spiraculum (s. str.) *simplex*, *Kobelt & Mollendorff*, *Nachr. Deuts. Malak. Ges.* xxix, 1897, p. 114, id., *Cat. Pneum.* 1899, p. 26.

Pearsonia (Pearsonia) simplex, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p. 175.

"Of much simpler characters than the typical form. The last whorl only a little detached, the sutural tube not bent back, the suture less excavated; and only a small expanded tube at the upper margin of the aperture." (*Nevill*)

Hab. India. Naga Hills (*Roberts*).

177. *Pearsonia travancorica*, *Blanford*.

Spiraculum travancoricum (Beddome), *Blanford*, J. A. S. B. xlix, 1880, p. 212, pl. 3, fig. 6, *Cooke*, *Cambr. Nat. Hist.* iii, 1895, p. 263, fig. 180 c.

Spiraculum (s. str.) *travancoricum*, *Kobelt & Mollendorff*, *Nachr. Deuts. Malak. Ges.* xxix, 1897, p. 114, id., *Cat. Pneum.* 1899, p. 26.

Pearsonia travancorica, *Kobelt*, *Conch.-Cab.*, *Cyclophoridae*, ii, 1913, p. 973.

Original description:—"Shell broadly umbilicate, depressedly turbinate, and, in the single aged specimen found, decorticated, whitish and smooth throughout. Traces of a brown epidermis remain around the umbilicus, and younger specimens are probably brown in colour, and perhaps ornamented with coloured bands, like other species of the genus. Spire raised, depressedly conical, suture deep, apex acute. Whorls $4\frac{1}{2}$ rounded, the last cylindrical, descending, and free near the aperture, and provided above, about three millimetres behind the mouth, with a rather elongate tube, which projects forward, and is in contact with the penultimate whorl throughout. The tube appears broken at the end, and may have been even longer originally; the anterior termination in the specimen is in a line with the oblique peristome of the shell. Aperture diagonal, circular; peristome double, inner lip sharp, not projecting much, curved backwards near the penultimate whorl; outer peristome expanded, and wavy above externally and below, straight and somewhat narrower on the left margin. Operculum nearly flat externally, concave within; the outer margins of the whorls free and lamellar, except towards the middle, the circumference surrounded by several raised lines, the edges of the outermost whorls. Major diameter $12\frac{1}{2}$ mm., minor $10\frac{1}{2}$, axis 7, diameter of the mouth $5\frac{1}{2}$ mill." (*Blanford*.)

Hab. India: Hills between Travancore and Tinnevely.

"This species differs from all others of the genus by its higher spire, and by the combination of the mouth being free and the sutural tube being directed forward and attached to the last whorl." (*Blanford*.)

Subgenus **PSEUDOSPIRACULUM**, *Kobelt*

Diplopterum, *Mollendorff*, *Nachr. Deuts. Malak. Ges.* xxix, 1897, p. 114, id., *Cat. Pneum.* 1899, p. 26 (non *Diplopterum* corr.

Diplopterum, *Swanson*, 1889)

Pseudospiraculum, *Kobelt*, *Das Tierreich*, Lief. 10, 1902, p. 175

TYPE, (only species) *Spiraculum favi banki*, *Blanford*.

Range India.

Shell with a tongue-shaped process on the lower margin of the peristome.

178. *Pearsonia fairbanki*, *Blanford*.

Spiraculum fairbanki, Blanford, J. A. S. B. xxxviii, 1869, p. 135, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 48, Theobald, Cat. Shells Brit. India, 1876, p. 38.

Pterocyclus (Rhiostoma) haughtoni, Nevill, Hand List, I, 1878, p. 262.

Original description —“Testa late umbilicata, convexo-depressa, solidiuscula, oblique scabrè striatula, superne castanea, subtus albida, fascia angusta mediana saturatiore, utriusque angulato-marmorata, ornata; spira depresso-conoidea, apice prominulo obtusiusculo, sutura impressa, anfractibus 5, convexiusculis, ultimo cylindrico, antice longe soluto, lateraliter descendente, superne carina obtusa a sutura usque ad tubulum marginalem decurrente munito, apertura libera, obliqua, diagonali, circulari; peristomate subduplici, extus incrassato, reflexiusculo, superne ad sinistram inciso, tubulo imperfecto, antice aperto, sinistrorse erecto, rimam coronante, munito, umbilico perspectivo, profundo, operculo testaceo, multispirato, breviter cylindrico, apice planato, lævigato, anfractibus arcte convolutis, marginibus acute carinatis, spatius intersitis epidermide scabra vestitis; intus profunde excavato, polito.

“Diam. major 21, minor 11, axis $8\frac{1}{2}$ mill” (Benson.)

Hab. Burma: Moulmain (*Haughton, Theobald*), Dainotha, N.E. of Moulmain (*Stoliczka*).

Fig. 22.—*Rhiostoma haughtoni*

“Young specimens have no trace of the upper notch at the outer lip and are generally undistinguishable from the planorboid *Cyclophora*, like the Ceylon *C. annulatus*, Trosch., or the Nilgherry

C. ravidus, Bens. Only in full-grown specimens the last whorl at the aperture becomes detached from the previous whorl. The operculum is first thin, flattened outside and slightly concave inside; gradually the shape becomes convex outside, as the whorls increase in number, and at the same time the internal concavity enlarges" (*Stoliczka*.)

The shell now figured is in the general collection of the British Museum, and measures Major diam. 21.5, minor 18, alt. 12 mm

180 *Rhiostoma strubelli*, *Mollendorff*.

Rhiostoma strubelli, Mollendorff, Nachr. Deuts. Malak. Ges. xxxi, 1899, p. 166, Kobelt, Das Tierreich, Lief. 16, 1902, p. 179, id., Conch.-Cab., Cyclophoridae, n, 1910, p. 759, pl. 113, figs. 10, 11.

Original description — "T. late et aperte umbilicata, umbilico $\frac{5}{8}$ diametri aequante, conoideo-depressa, solidiuscula, subtiliter sed distincte striatula, griseo-alba, stigmis fulguratis castaneis picta, ad peripheriam tænia angusta fusca ornata. Spira breviter conoidea. Anfr. 5 teretes, sutura sat profunde impressa submarginata disjuncta, ultimus longe descendens, breviter solutus, in parte soluta superne carinula obtusa, ad aperturam tubulo crassiusculo munitus. Apert. fere diagonalis, circularis, peristoma breviter expansum, sat incrassatum. Operculum subtestaceum breviter cylindricum, 2.5 mm altum.

"Diam. 18, alt. 10 mm." (*Mollendorff*.)

Hab. Burma: Kalow, Shan States (*Strubell*).

Section CYCLOTEÆ.

Genus *CYCLOTUS*, *Swainson*

Cyclotus, Swainson, Treat. Malac. 1840, pp. 180, 330 (as subgenus of *Cyclostoma*), Pfeiffer, Zeits. Malak. viii, 1851, p. 132, id., Mon. Pneum. 1852, p. 16 (as genus), Adams, Gen. Rec. Moll. n, 1855, p. 274, Chemu, Man. Conchyl. i, part 2, 1860, p. 485, Blandford, A. M. N. H. ser. 3, xii, 1864, p. 446, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 14, Martens, Pneum. Exped. Ost-Asien, Zool. n, 1867, p. 116, Nevill, Hand. List, i, 1878, p. 255, Fischer, Man. Conchyl. 1885, p. 745 (as subgenus of *Pterocyclus*), Mollendorff, Ber. Senckenb. Nat. Ges. 1890, p. 266, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xiv, 1897, p. 116, id., Cat. Pneum. 1899, p. 28, Sarasin, Land. Moll. Celebes, 1899, p. 35, Kobelt, Das Tierreich, Lief. 16, 1902, p. 188, id., Conch.-Cab., Cyclophoridae, n, 1911, p. 773.

TYPE, *Cyclotus variegatus*, Swainson.

Range Southern Asia, Southern China and Japan, New Guinea. Shell widely umbilicated, flat or discoid, with a dark periostracum, peristome simple or provided with a wing. Operculum composed of two laminae separated by a deep furrow, the inner membranaceous, the outer calcareous, flat, without process or appendages.

Subgenus **SIPHONOCYCLUS**, *Mollendorff*

Rhiostoma (part), Benson, A. M. N. H. ser. 3, v, 1860, p. 96.
Siphonocyclus, Mollendorff, Nachr. Deuts. Malak. Ges. xxxii, 1900,

TYPE, *Cyclotus filocinctus*, Benson.

Range. India, Farther India, Ceylon, Andamans, Nicobars, Seychelles.

Animal white, with a short oval foot, undivided beneath; small black tentacles with eyes at base.

Shell small, umbilicated, pyramidal-turbinate or depressed turbinate, generally with spiral liræ, periostracum thick. Operculum convex on the inner side, multispiral, normally truncate conoid, composed of two laminae, the inner membranaceous, outer calcareous, very concave, the edges of the whorls free, occasionally beautifully ornamented.

Subgenus CYATHOPOMA, Blanford.

- Cyathopoma* (part), Blanford, J A S B xxx, 1861, p. 348, Kobelt & Mollendorff, Nachr Deuts Malak. Ges. xxix, 1897, p. 119, id, Cat Pneum 1899, p. 31, Kobelt, Das Tierreich, Lief. 16, 1902, p. 219, Pilsbry, Bull Amer Mus Nat Hist xl, 1919, p. 328.

TYPE, *Cyclotus filocinctus*. Benson

Range. Southern India, Ceylon, Nicobars, Japan; Seychelles, Belgian Congo.

Shell small, more or less depressed, widely umbilicated, with distinct spiral liræ; peristome single or double, operculum with raised edges to the whorls, which are often incurved towards the centre and prettily ornamented.

182. *Cyathopoma album*, Beddome.

Cyathopoma (*Jerdonia*) *album*, Beddome, P.Z S 1875, p. 446, p. 52, fig. 14

Cyathopoma album, Theobald, Cat Shells Brit India, 1876, Addenda, p. 11, Pfeiffer, Mon Pneum Suppl 3, 1876, p. 379

Jerdonia albu, Jousseaume, Mém Soc Zool France, vii, 1894, p. 308

Cyathopoma (s. str.) *album*, Kobelt & Mollendorff, Nachr Deuts Malak. Ges. xxix, 1897, p. 119; id, Cat Pneum. 1899, p. 31

Cyathopoma (*Cyathopoma*) *album*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 219, fig. 46.

Original description — "Shell widely umbilicated, depresso-turbinate, furnished with a chalky-white or whitish-brown epidermis, having a minute vertical striation, which is early deciduous, or only present in patches, the shell beneath being of a peculiar shining white horny texture; spire conoidal, apex subacute; whorls 4-5, spirally lirate, the lowest with four to five,

the penultimate with three ribs or lines, more prominent before the loss of the epidermis; the umbilicus prominently spirally ribbed within; aperture circular, oblique, peristome thin, simple, continuous, slightly angled at the inner base at the termination of the first rib round the umbilical region; operculum externally very concave, with the margins of the outer shelly layer much raised but straight and not at all arched, multispinal, with a small transparent nucleus. length $\frac{1}{4}$ inch [1.75 mm.], breadth $\frac{1}{2}$ inch [2 mm.]” (*Beddome*.)

Hab India. Yellagerry Mountains, Sirumullay Hills, Dindigul (*Beddome*) Ceylon: Dumbola (*Beddome*).

Stated by the author to be allied to *C. lolamullense*, Blanford.

183. *Cyathopoma artatum*, Sykes

Cyathopoma artatum, Sykes, Proc. Malac Soc. II, 1897, p. 236, pl. 18, figs. 19, 20.

Cyathopoma (s. str.) *artatum*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxxi, 1899, p. 186, id., Cat. Pneum. 1899, p. 103.

Cyathopoma (*Cyathopoma*) *artatum*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 219.

Original description.—“Testa dextroisa, late et perspective umbilicata, depresso-turbinata, apice acutula, periostraco calcareo, deciduo, induta, sub hoc albido-cornea, polita, anfr. $4\frac{1}{2}$, regulariter accrescentes, spiraliter lirati, sub lente leviter transversim striati, ultimus carinis duabus supra peripheriam, et sex liris magis approximatis sub peripheriam et in umbilico, penultimus duabus carinis; apertura circularis, peristomate simplice, continue, intus leviter incrassato; operculum valde concavum, multispirale. Alt. 1.3, lat. 2 mm.” (*Sykes*.)

Hab. Ceylon: Uda Pussellawa (*Preston*)

“This minute species is noteworthy for being clothed with a periostracum of a very chalky nature, which, however, appears to be very easily rubbed off, and many specimens only fully exhibit it within the umbilical area. The three upper carinations are sharply edged, while those below the periphery and in the umbilicus are rounded and thread-like.” (*Sykes*.)

184. *Cyathopoma atrosetosum*, *Beddome*

Cyathopoma (*Jerdonia*) *atrosetosum*, Beddome, P. Z. S. 1875, p. 448, pl. 52, fig. 18.

Cyathopoma (*Cyathopoma*) *latilabre*, Kobelt, Das Tierreich, Lief. 16, 1902, p 222

Original description.—"Shell deeply and prominently umbilicated, turbinato-globose, glabrous or subglabrous, epidermis of a pale yellowish-brown colour, with oblique vertical dark chestnut-coloured bands and a minute vertical striation, white beneath the epidermis; spire conical, apex subacute; whorls five or six, the lowest smooth in its upper half near the suture, in the region of the periphery surrounded with three rather prominent carinations with a smooth space between them and the umbilical region, the penultimate and antepenultimate with generally two less prominent lines or ribs, lowest whorl cylindrical, slightly descending with an inconspicuous swelling followed by a slight contraction just in front of the reflexed peristome, the umbilicus furnished with very prominent spiral ribs up to the very apex of the shell, aperture a little oblique, subcircular; peristome half-double, the inner lip dilated and much angled on its outer margin, small and continuous round the inner margin, outer lip irregularly angled on its outer margin, and much dilated at the inner basal margin, where it suddenly terminates, not being continued round the inner portion of the aperture, operculum externally milky white, shelly, papilliform, smooth, flattened at the apex, where it is furnished with a small circular aperture, inner layer membranaceous, slightly concave externally, with a central diaphanous nucleus, multispiral, the edges of the whorls raised. height of shell $\frac{3}{8}$ inch [4.5 mm], the greatest diameter equalling the height"

Hab. India. South Canara Ghats, 2000-3000 ft elevation (*Beddome*); Wynad (*Fairbank*)

"The operculum is an exaggerated form of that of the typical *Cyathopoma filocinctum*, the margins of the outer shelly layers are arched over and almost meet in the centre, forming a papilla with only a small hole in the centre" (*Beddome*)

Cyathopoma (*Cyathopoma*) *mariæ*, Kobelt, Das Tierreich, Lief 16, 1902, p. 222.

Original description :—"Coquille très petite, de forme conique, à sommet obtus. La base, un peu dilatée et arrondie, est perforée au centre par un ombilic étroit, un peu évasé et recouvert en partie par le bord columellaire, sa couleur, d'un corré blanc au sommet, devient d'un gris-jaunâtre foncé sur les derniers tours. Le test mince, un peu luisant et subtransparent, est strié longitudinalement et enroulé circulairement de quatre petits cordons filiformes. La spire est formée par l'enroulement de cinq tours et demi arrondis

et turbinés, dont l'accroissement s'effectue assez régulièrement. La suture qui est séparée est très profonde et très apparante, malgré la petitesse de la coquille. Les deux premiers tours, lisses et d'un corné blanchâtre, forment, à l'extrémité de la spire, un sommet obtus; les tours suivants sont striés longitudinalement et ornés de côtes circulaires; le dernier tour qui est, ainsi que les deux précédents, d'un gris-jaunâtre, est orné de très fines stries longitudinales légèrement obliques, très serrées, et de quatre petites côtes très espacées qui s'enroulent sur la partie médiane. L'espace assez étendu qui les sépare en bas de l'ombilic et en haut de la suture est presque lisse. L'ouverture est circulaire et le péristome est droit, excepté dans sa partie columellaire, où il se déjette du côté de l'ombilic. L'opercule, profondément enfoncé dans l'ouverture, est légèrement concave sur la face externe, qui est lisse au centre et entourée à la périphérie de trois petites lamelles concentriques." (*Jousseaume.*)

Hab. Ceylon (*Simon.*)

194. *Cyathopoma ovatum*, *Beddome.*

Cyathopoma (Jerdonia) ovatum, Beddome, P. Z. S. 1875, p. 447, pl. 52, fig. 16

Cyathopoma ovatum, Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 378, Theobald, Cat. Shells Brit. India, 1876, Addenda, p. 11

Cyathopoma (s. str.) ovatum, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 120, id., Cat. Pneum. 1899, p. 32

Cyathopoma (Cyathopoma) ovatum, Kobelt, Das Tierreich, Lief. 16, 1902, p. 223

Original description.—"Shell umbilicated, ovate, spirally lirate, furnished with a light-bright brownish, obliquely striated, thread-like epidermis, and a few hairs along the spiral costulations, white beneath the epidermis, spire conical, apex subacute; whorls 5, the lowest with about eleven spiral costulations continuous down to the umbilicus, the four upper lines nearest the suture less conspicuous, or subobsolete, the penultimate with three to four spiral lines, umbilicus moderately open, spirally lirate within; aperture oblique, oblong, the vertical and spiral lines clearly visible on the inside of the whorl, peristome continuous, or a little interrupted at the apex on the penultimate whorl, double, except on its inner or left margin, the outer lip expanded and reflexed on its outer margin, contracted at its base and again prominently expanded at the base of the columellar margin, the inner one white, shining, and minutely crenulated on its outer and lower margins; operculum as in *C. wynadense*, with a moderate transparent nucleus: length $\frac{1}{2}$ inch [2.5 mm.], greatest breadth $\frac{1}{3}$ inch [2 mm.]."

Hab. India. Yellagerry Hills, Salem District.

"The epidermis and spiral costulations are very similar to those of *filocinctum* and *wynadense*, it is, however, a smaller species, and ovate, not turbinate in form, and with a different

operculum *C. filocinctum* has the inner lip of the peristome furnished with large, prominent, obtuse, white crenations; and the spiral ribs or costulations on the base of the lowest whorl are always continuous up to the umbilical region, there being no intervening smooth space. *C. wynadense* has the inner lip of the peristome smooth; and the spiral costulations on the lower whorl are generally interrupted by a smooth space before the umbilical region is entered; but this latter character is not constant, as some of my specimens have the costulations continuous up to the umbilical region, as in *filocinctum*, so that it cannot, in the absence of the operculum, be looked to as a characteristic to distinguish them; but the peristome, where the shell is adult, is a safe character" (*Beddome*.)

195 *Cyathopoma peilei*, *Preston*.

Cyathopoma peilei, *Preston*, Proc. Malac. Soc. v, 1903, p. 340, text-fig. 1.

Original description.—"Shell dextral, trochiform, umbilicated. Whorls 5, spirally grooved and cross-sculptured with distinct liræ. Periostracum smooth, of a deep rich brown colour. Suture channelled. Peristome double and reflexed. Umbilicus deep. Aperture almost circular. Alt 3, diam. max. 3 mm."

Hab. India: Yercaud, Shevroy Hills (*Peile*).

"The nearest ally to this species seems to be *Cyathopoma wynadense*, Blanford, from which it differs in having coarser but fewer spiral lines of sculpture, cross plications, a slightly more narrow umbilicus, and a channelled suture; moreover, it is more trochiform in shape and of a much darker colour" (*Preston*.)

196 *Cyathopoma prestoni*, *Sykes*.

Cyathopoma prestoni, *Sykes*, Proc. Malac. Soc. II, 1897, p. 236, pl. 16, figs. 17, 18.

Cyathopoma (s. str.) *prestoni*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges., 1897, p. 136, id., Cat. Pneum. 1899, p. 104.

Cyathopoma (*Cyathopoma*) *prestoni*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 228.

Original description.—"Testa dextrorsa, elevata, pyramidalis, mediocriter et perspective umbilicata, periostraco brunneo leviter induta, apice obtusula, anfr. 5, regulariter accrescentes, leviter et obsolete spiralter lirati, transversim striati, ultimus carinis obsoletis quinque (?), fere lævis in umbilico, sutura bene impressa, apertura fere circularis, continua, peristomate leviter intus incrassato. Alt. 2, lat. 1.5 mm."

Hab. Ceylon: Uda Passellawa (*Preston*).

"In form this species is intermediate between *C. marie* and *C. artatum*, with a well-marked suture. The brown periostracum and nearly obsolete carinæ, with the almost smooth umbilical area, are its distinguishing features" (*Sykes*.)

A larger form than the type is recorded by Mr Sykes* found by Mr. Collett at Lower Ambagamuwa (2500 ft. alt.). It differs from the type not only in its greater size, having an additional whorl, but also in its more elevated form, and in the more strongly marked spiral sculpture, the lines also being more numerous, the periostracum, moreover, is thicker, and, under a lens, gives an obsoletely decussated appearance to the shell

197. *Cyathopoma shevaroyanum*, *Beddome*

Cyathopoma shevaroyanum, Beddome, P Z S 1875, p 451, pl 53, figs 32, 33, Pfeffer, Mon Pneu. Suppl 3, 1876, p 378, Hanley & Theobald, Conch Ind 1876, p xiii, Nevill, Hand List, i, 1878, p 259, id, J A S B l, part 2, 1881, p 145, pl 6, fig 7

Cyathopoma (*Cyathopoma*) *wynaadense*, Kobelt, Das Tierreich, Lief 16, 1902, p. 224

Original description :—"Testa aperte umbilicata, turbinata, spiraliter lirata, albida, epidermide tenui, fusciscenti, striatula, induta. Spira conica, apice subacuto, sutura profunda. Anfr 4½-5 rotundati, juxta suturam lævigati, ultimus teres, lineis plerumque 4 elevatis ad peripheriam cinctus, subtus lævigatus, circum umbilicum perspectivam intus confertissime liratum vix compressus. Apertura parum obliqua, circularis, vix sinuata; peristoma duplex, externum, expansum, internum vix porrectum. Operculum?

"Diam maj 3, min 2, alt. 3. Apert intus, 1 mill" (*Blanford*)

Hab India Wynaad, Nilgiris. Closely allied to *C. decanense*

Subgenus *JERDONIA*, *Blanford*.

Jerdonia, Blanford, J A S B xxx, 1861, p 348 (as genus). id., A M N H ser 3, xiii, 1864, p 448, Pfeiffer, Mon Pneum Suppl 2, 1865, p 72, Nevill, Hand List, i, 1878, p 259 (as subgenus of *Cyathopoma*), Kobelt & Mollendorff, Nachr Deuts Malak Ges xxiv, 1897, p 120, id., Cat Pneum 1899, p 32, Kobelt, Das Tierreich, Lief 16, 1902, p 224

Type, *Cyrtostoma trochilea*, Benson.

Range Southern India, Ceylon, Andamans

Shell rather narrowly umbilicated (umbilicus rarely covered), more or less turbinate, conicous, smooth or ornamented with spiral lines. Operculum concentric, multispiral, double, surrounded by a marginal groove, inner side membranaceous, outer side calcareous.

202. *Cyathopoma anamullayanum*, *Beddome* (emend)

Cyathopoma (*Jerdonia*) *anamullayanum*, Beddome, P Z S 1875, p 446, pl 52, fig 15, Kobelt, Das Tierreich, Lief 16, 1902, p 224

Cyathopoma anamullayanum, Pfeiffer, Mon Pneum Suppl 3, 1876, p 380, Theobald, Cat Shells Brit India, 1876, Addenda, p ii

Cyathopoma (*Jerdonia*) *anamullayanum*, Kobelt & Mollendorff, Nachr Deuts Malak Ges xxix, 1897, p 120, id, Cat. Pneum 1899, p 32.

Original description —"Shell umbilicated, turbinate, with a conical apex, glabrous, with a very inconspicuous vertical striation. epidermis yellowish, with broad, oblique, bright chestnut vertical bands, white beneath the epidermis, whorls 6, convex, with deep sutures, and very faint spiral lines, generally visible on the two to three lower whorls under a powerful glass, the lowest whorl somewhat flattened below and keeled round the umbilical region,

which is white and striated within, and less open than in *C. malabaricum*; aperture a little oblique, oblong; peristome, when adult, double, not dilated, continuous, before maturity simple, thin, and a little interrupted at the apex, where it touches the penultimate whorl, operculum a little retracted, a little concave externally from the slight elevation of the margin of the outer shelly portion, closely multispiral, with a moderate transparent nucleus length $\frac{1}{4}$ inch [3.5 mm], greatest diameter $\frac{1}{8}$ inch [3 mm.]” (Beddome)

Hab. India: Anamullay Hills, 6000 ft; Pulney Hills, 6000 ft.

It is stated to be a glabrous species with markings similar to those found in *C. malabaricum*, but it is much larger and more conical, not at all depressed, less prominently striated, the umbilicus differently shaped, and with a different operculum.

203. *Cyathopoma ceylanicum*, Beddome.

Cyathopoma (Jerdonia) ceylanicum, Beddome, P. Z. S. 1875, p. 450, pl. 52, fig. 20, Nevill, Hand List, 1, 1878, p. 259 (*ceylonicum*), Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xix, 1897, p. 120, id., Cat. Pneum. 1899, p. 32; Kobelt, Das Tierreich, Lief. 16, 1902, p. 225

Cyathopoma ceylanicum, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 6, Hanley & Theobald, Conch. Ind. 1876, pl. 145, fig. 8, Theobald, Cat. Shells Brit. India, 1876, p. 38; Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 381

Jerdonia ceylanica, Jousseaume, Mém. Soc. Zool. France, vii, 1894, p. 308.

Original description.—"Shell prominently umbilicated, turbinate, with a conical blunt apex, inconspicuously spirally lirate, epidermis glabrous, yellowish, with obliquely vertical bright chestnut bands and a very inconspicuous vertical striation; whorls 5, convex or subangular, the lowest with two inconspicuous lines or ribs along the region of the periphery, and sometimes a third still more obsolete between them and the suture; penultimate with two carinations, the lower one almost touching the suture and sometimes obsolete, antepenultimate inconspicuously unicarinate; umbilicus somewhat angled at the entrance, smooth within; aperture nearly vertical, circular, peristome subdouble, continuous, inconspicuously angled or crenated at the exit of the two carinations of the lowest whorl, operculum as in *C. anamallayanum*: length $\frac{1}{4}$ inch [2.75 mm.], greatest diameter $\frac{1}{8}$ inch [3 mm.]"

Hab. Ceylon. Rambaddi waterfalls (Beddome).

"Very like *C. anamallayanum*, but distinguished under the lens by its much more prominent though still inconspicuous carination; it is also of greater diameter with reference to its length." (Beddome)

In 1871 H. Nevill published a *Cyathopoma ceylanicum* in his Enum. Helic. Pneum. Ceylon, but no description or figure was given and Beddome's name is consequently not thereby invalidated.

204. *Cyathopoma colletti*, *Sykes*.

Jerdonia ti ochlea (non Benson), Hanley & Theobald, *Conch Ind.* 1875, pl 135, figs 5, 6

Cyathopoma (Jerdonia) colletti, Kobelt, *Das Tierreich*, Lief. 16, 1902, p 225, figs 47 *b*, 47 *c* (operculum).

Original description. — "Testa dextrorsa, elevata, pyramidalis, mediocriter et perspective umbilicata, cornea, strigis castaneis obliquis picta, anfr. $4\frac{1}{2}$, convexi, regulariter accrescentes, primi læves, reliqui spiraliter hirati, ultimus duabus hris, unica ad peripheriam, altera basali, ornata in regione umbilicari lævi impressa, sutura impressa, apertura subcircularis. Diam max. 1.1, alt 1 mm, spec. maj diam 1.5, alt 1.2 mm" (*Sykes*.)

Hab Ceylon: Eton Estate, Punduloya, 4000 ft. (*Collett*).

"This species may easily be separated from the other known species of Ceylon by the fact that it is smooth save for the two distinct spiral hris on the last whorl, of which only one appears on the earlier whorls, and by the difference in its coloration.

"The operculum is very remarkable seen from without it appears as a ring of foliaceous laminae standing up and surrounding a deep central pit." (*Sykes*)

205. *Cyathopoma conoideum*, *Sykes*.

Cyathopoma conoideum, Sykes, *Proc Malac Soc* III, 1898, p 159, pl. 10, fig 3, Kobelt & Mollendorff, *Nachr. Deuts Malak. Ges.* XXXI, 1899, p 136, id, *Cat Pneum* 1899, p 104

Cyathopoma (Jerdonia) conoideum, Kobelt, *Das Tierreich*, Lief. 16, 1902, p. 225

Original description — "Testa dextrorsa, valde elevata, trochoidalis, mediocriter et perspective umbilicata, periostraco brunnea induta, apice acutulo, anfr. 7, lente accrescentes, plano-convexi, primi læves, reliqui obsolete spiraliter hirati, ultimus hris duabus, unica in medio, altera infra, ornatus, fere lævis in regione umbilicari, sutura valde impressa, apertura subcircularis, basi recedens, continua, peristomate leviter incrassato. Alt. 2.6, lat 1.5 mm"

Hab. Ceylon Binoya, Watawala (*Collett*).

"A very interesting form, remarkable for its trochoid shape (it is almost turreted in form, owing to the deeply impressed suture) and obsolete spiral hris." (*Sykes*.)

206. *Cyathopoma elatum*, *Beddome*

Cyathopoma (Jerdonia) elatum, Beddome, *P. Z S* 1875, p 448, pl 52, fig 19, Nevill, *Hand List*, I, 1878, p 259, Kobelt & Mollendorff, *Nachr. Deuts. Malak Ges.* XXIX, 1897, p 120, id,

Cat Pneum 1899, p 32, Kobelt, Das Tierreich, Lief 16, 1902, p. 225

Cyathopoma elatum, Theobald, Cat Shells Brit India, 1876, Addenda, p 11, Pfeiffer, Mon Pneum. Suppl. 3, 1876, p 382

Original description:—"Shell narrowly umbilicated, ovato-pyramidal, spirally lirate, epidermis brownish, furnished with distant prominent vertical striæ and a fine very minute striation also present between them; spire conical, apex subacute, sutures deep; whorls 5, rounded, furnished with numerous rather close spiral costulations, continuous down to the ribbed umbilical region; aperture vertical, circular; peristome double, the inner one continuous, quite entire or very inconspicuously crenate, outer more or less expanded and reflexed, continuous all round except at the left apex, where it comes into contact with the base of the penultimate whorl, operculum as in *C. procerum* &c. height $\frac{1}{8}$ inch [3 mm.], greatest breadth $\frac{1}{10}$ inch [2.5 mm.]"

Hab India: Golconda Hills, Vizagapatam District, 3000 ft. elevation (*Beddome*).

"Very near *C. procerum*, but with rather a different epidermis and more ovate, having a broader base" (*Beddome*.)

207 *Cyathopoma imperforatum*, Nevill.

Cyathopoma (Jerdonia) imperforatum, Nevill, J A S B 1, 1881, p 145, Kobelt & Mollendorff, Nachr Deuts Malak Ges xxix, 1897, p 120, id, Cat Pneum. 1899, p 32, Kobelt, Das Tierreich, Lief 16, 1902, p 223

Nevill states that it is at once distinguished by its being the only described species of the genus with an imperforate base; although he hoped to give a figure and more detailed description later on, he never appears to have done so. He referred the "probably new species" from the Anamullay Hills at 6600 ft., mentioned by Beddome in Proc. Zool. Soc 1875, p 449, under *C. elatum* to his species. His specimen was received from Beddome.

Alt. $2\frac{1}{2}$, diam 2 mill.

Hab. India: Anamullay Hills (*Beddome*).

208. *Cyathopoma innocens*, Sykes.

Cyathopoma innocens, Sykes, Journ. Malac vii, 1899, p. 29, pl. 2, fig 2

Cyathopoma (Jerdonia) innocens, Kobelt, Das Tierreich, Lief 16, 1902, p 226

Original description—"Testa turrita, elongato-pyramidalis, perspectiva umbilicata, apice obtusulo; anfr. $4\frac{1}{2}$ -5, lente accrescentes, valde convexi, sub lente lineis incrementibus parvis notati, sutura valde impressa, apertura circularis; operculum multispirale, medio concavum Alt 1 65, diam. 1 2 mm."

Hab Ceylon Eton Estate, Punduloya, 4000 ft (*Collett*).

"This minute speck, which appears to be adult, has no salient characters. The periostracum seems absent and there is no sculpture beyond the lines of growth, the suture is very deep and the whorls very convex. It belongs to the group of *C. turbinatum*, Sykes, but it is much smaller, and more elevated in proportion to its breadth, the umbilicus is also narrower." (*Sykes*)

209. *Cyathopoma malabaricum*, *Blanford*.

Cyclotus malabaricus, Blanford, J A S. B. xxix, 1860, p. 125, Pfeiffer, Mon. Pneum. Suppl. 2, 1866, p. 32.

Cyathopoma malabaricum Blanford, A. M. N. H. ser 3, xiii, 1864, p. 449, id., Journ. Conchyl. xvi, 1868, p. 261, pl. 12, fig. 7, Hanley & Theobald, Conch. Ind. 1874, pl. 82, figs. 1, 4, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 25, Nevill, Hand. List. i, 1878, p. 258.

Cyathopoma malabaricum, Theobald, Cat. Shells Brit. India, 1876, p. 38.

Cyathopoma (Jerdonia) malabaricum, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 120, id., Cat. Pneum. 1899, p. 32; Kobelt, Das Tierreich, Lief. 16, 1902, p. 226.

Original description.—"Testa subaperte umbilicata, depresso-conica, albida glabra, nitidula, epidermide decidua cornea, ad anfr. ultimum transverse fusco-strigata, induta, spira conica, apice acuta, sutura profunda, anfr. 4 rotundati, celeriter crescentes, ultimus cylindraceus, apertura parum obliqua, circularis, prope umbilicum parum sinuata, superne vix angulata; perist. duplex, externum brevissime expansum, internum porrectum, acutum, continuum; umbilicus perspectivus. Operculum haud immersum, duplex, internum corneum multispinum, externum testaceum, anfractuum marginibus lamella spirali, albida, scabra ad anfr. externos peraelevata et versus centrum incurvata, quasi convexa, munitis

"Diam. maj. $3\frac{1}{4}$, min. $2\frac{3}{4}$, alt. $2\frac{1}{2}$, apert. diam. $1\frac{1}{8}$ mm."

Hab. India. Pykara, Nilgiris (*Blanford*).

"Nearly allied to *Cyclotus filocinctus*, Benson, by the peculiarity of its operculum, this shell is distinguished by its smaller size, more depressed form, and less expanded peristome, by the absence of the marked sculpture of *C. filocinctus*, and by the epidermis being lighter in colour and marked by brown transverse streaks on the last whorl. That of *C. filocinctus* is hispid. . . The construction of the operculum is very peculiar. The testaceous spiral lamina being very much more raised towards the exterior than towards the centre, and being curved inwards, the interior whorls of the operculum are almost concealed and the appearance, unless very closely examined, is that of the operculum of a *Turbo* hollowed out at the centre. The lamella in *C. malabaricus* is rather more elevated than even in *C. filocinctus*" (*Blanford*).

210. *Cyathopoma natalicum*, *Godwin-Austen*.

Cyathopoma natalicum, Godwin-Austen, Proc. Zool Soc 1895, p. 453, text-fig D

Cyathopoma (s. str.) *natalicum*, Kobelt & Mollendorff, Nachr. Deuts Malak Ges xxix, 1897, p. 120, id., Cat Pneum 1899, p. 32

Cyathopoma (*Cyathopoma*) *natalicum*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 222.

Original description — "Shell dextral, depressedly turbinate; openly umbilicated, flat below, angulate at the umbilicus; sculpture smooth above, with very fine regular transverse costulation on the last whorl, with a strong lirate rib on the periphery; colour pale ochraceous, spire low, apex blunt, suture well marked, whorls $4\frac{1}{2}$, convex, aperture arcuately circular, subvertical, sinuate on outer margin, somewhat angular below at the peripheral ribs; peristome double, continuous.

"Operculum multispiral, elongate, with a deep central depression.

"Major diam. 2.25, alt. axis 1.2 mm." (*Godwin-Austen*)

Hab. Nicobars. Camorta.

211. *Cyathopoma nitidum*, *Beddome*.

Cyathopoma (*Jerdonia*) *nitidum*, Beddome, P. Z. S. 1875, p. 445, pl. 52, fig. 12, Kobelt & Mollendorff, Nachr. Deuts Malak Ges xxix, 1897, p. 120, id., Cat Pneum 1899, p. 32; Kobelt, Das Tierreich, Lief. 16, 1902, p. 226.

Cyathopoma nitidum, Theobald, Cat Shells Brit India, 1876, Addenda, p. 11, Pfeiffer, Mon Pneum Suppl. 3, 1876, p. 381

Original description — "Shell inconspicuously umbilicated, pyramidal, turreted, smooth, shining, of a yellowish olive tint, apex rather obtuse, sutures deep, a very minute oblique striation is generally visible under the lens; whorls 5, convex, smooth, the lowest scarcely descending towards the aperture; aperture circular; peristome continuous, single, thin; operculum double, thick, surrounded by a sulcate margin, externally very slightly concave, the nucleus very large, half the diameter of the circle, very thin, transparent, shining, destitute of whorls, the outer portion externally shelly, internally membranaceous, furnished with an exquisitely close spiral sculpture. length of shell varying from $\frac{1}{12}$ [2 mm.] to $\frac{1}{8}$ inch [3 mm.], breadth of lowest whorl $\frac{1}{12}$ inch [2 mm.]"

Hab. India: Anamullay Hills, 6000 ft., South Canara Ghats, 4000 ft. (*Beddome*).

"A shell of very simple structure, closely allied to *Cyclostoma trochlea*, Bens (*Jerdonia*, Blanford), but without any carinations, and a much smaller umbilicus; the operculum is very similar, but with a larger transparent nucleus and much more closely wound.

"The operculum of *Cyathopoma wynadense*, *procerum*, and *kolamallense*, is very similar to that of this shell, only differing in being a little more concave externally." (*Beddome*.)

212. *Cyathopoma ogdenianum*, *Preston*

Cyathopoma ogdeniana. Preston, Rec. Ind. Mus. III, 1909, p. 138, pl. 22, fig. 11

Original description —“Shell turbate, bearing traces of having been covered with a brown periostracum, sculptured above with distant transverse and spiral ridges, the former being absent on the base of the shell, in which region the latter are more numerous and less distant. Whorls $4\frac{1}{2}$, somewhat inflated; sutures deeply impressed; umbilicus wide and deep, peristome continuous, thickened, slightly reflexed and double throughout; aperture circular.

“Altitude 2.5, diam. maj. 2 mm.”

Hab. Ceylon. Kirklees Estate, Uda Pussellawa (*Ogden*).

“In general outline and sculpture this species may be compared with *C. serendibense*, Preston; the whorls of the present form are, however, more tumid, the umbilicus is wider and the peristome is throughout thickened, reflexed and double, which is not the case with *C. serendibense*” (*Preston*.)

213 *Cyathopoma perconoides*, *Preston*.

Cyathopoma perconoides, Preston, Rec. Ind. Mus. III, 1909, p. 139, pl. 22, fig. 9.

Original description :—“Shell elongately conic, white, bearing traces of having been covered with a light yellowish brown periostracum, whorls 6, convex, sculptured with several spiral liræ, sutures impressed; umbilicus very narrow and partly concealed by the outward expansion of the peristome; peristome continuous, reflexed in the umbilical region and at the base, simple at all other points, aperture almost circular.

“Alt. 2, diam. 0.75 mm.”

Hab. Ceylon. Bandarawella, prov. of Uva.

“Allied to *Cyathopoma conoides*, Sykes, but more elongately conoid in form, the spiral liræ are also much more numerous than in that species. The umbilicus is narrower, being reduced in the present form to a mere chink; the aperture, moreover, is more nearly circular than in *C. conoides*.” (*Preston*.)

214. *Cyathopoma procerum*, *Blanford*.

Cyathopoma procerum, Blanford, Journ. Conchyl. XVI, 1868, p. 262, pl. 12, fig. 8, Pfeiffer, Mon. Pnœum. Suppl. 3, 1875, p. 26, Hanley & Theobald, Conch. Ind. 1875, pl. 135, fig. 7, Theobald, Cat. Shells Brit. India, 1876, p. 38.

Cyathopoma (Jerdonia?) procerum, Nevill, Hand. List, I, 1878, p. 260.

Cyathopoma (Jerdonia) procerum, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. XXIX, 1897, p. 120, id., Cat. Pnœum. 1899, p. 32, Kobelt, Das Tierreich, Lief. 16, 1902, p. 226.

Original description —“Testa anguste umbilicata, pyramidata, spiraliter liata, albido-cornea, epidermide brunnea, verticaliter striata, juxta suturam plicata induta. Spira conica, apice acuto; sutura valde impressa. Anfr 5 rotundati, ultimus cylindraceus, subtus confertum liratus et strigis fuscis transversis signatus. Apertura subverticalis, circularis, ad basin et juxta umbilicum leviter sinuata, peristoma incrassatum, subduplex, extus leviter maculatum — Operculum retractum, tenne, intus membranaceum, extus subtestaceum, concavum, anfractuum marginibus vix elevatis.

“Diam. maj. 2, alt. $2\frac{3}{4}$ –3, diam. apert. c. perist. 1 mill.” (Blanford.)

Hab. India. Beypore, Malabar (*Fairbank*)

With more elevated spire than the other Indian species. It appears to be the only one, so far, discovered away from the mountain districts.

Nevill mentions a var. *major* (? distinct species) collected by Beddome in the Anamullays, but he gives no description.

215. *Cyathopoma serendibense*, Preston

Cyathopoma (Jerdonia) serendibense, Preston, Proc. Malac. Soc. v, 1903, p. 340, text-fig. 2

Original description —“Shell dextral, conoidal, moderately perforate, light brown in colour. Whorls 6, the last four spirally sculptured, the spirals being crossed at right angles by transverse plications bearing a stout bristly hair at each point of contact. The earlier whorls are quite smooth. Suture impressed. Peristome simple except where it approaches the columella, in which region it is reflexed. Aperture circular. Operculum calcareous, concave, multispiral, the central nucleus being situated at the bottom of a deep hollow. Alt. 3, diam. 2.5 mm.” (Preston.)

Hab. Ceylon. Lower Uda Pussellawa.

“This species appears to be most closely allied to *Cyathopoma ceylanicum*, Beddome, from which, however, it is easily distinguished by its very prominent spiral sculpture, and by its whorls being much less swollen than is the case in that species.” (Preston.)

216. *Cyathopoma tignarium*, Benson.

Cyathopoma (s. str.) trochleum, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xix, 1897, p. 120, id., Cat. Pneum. 1899, p. 32.

Original description.—"Testa anguste umbilicata, pyramidato-turrita, glabra, albida, apice obtusiusculo, sutura impressa, anfractibus 5, angulato-convexis, superne 1 carinatis, ultimo tricarinato, carino 1 superiori, 1 submediana, 1 circum umbilicari, apertura obliqua, circulari, $\frac{2}{3}$ longitudinis æquante; peristomate acuta, ad finem carinæ inferioris vix angulato; umbilico pervio

"Diam. 2, long. 3 mill."

Hab. India: Nilgiris (*Jerdon*, *Blanford*).

"This minute shell is singular in its turrit form, and in the arrangement of its keels, which gives a flat cylindrical appearance to the periphery of the lower whorl." (*Benson*.)

218. *Cyathopoma turbinatum*, *Sykes*.

Cyathopoma turbinatum, Sykes, Proc. Malac. Soc. ii, 1897, p. 236, pl. 16, figs 15, 16; Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxxi, 1899, p. 136, id., Cat. Pneum. 1899, p. 104

Cyathopoma (Jerdonia) turbinatum, Kobelt, Das Tierreich, Lief. 16, 1902, p. 227.

Original description.—"Testa dextrorsa, depresso-pyramidalis, late et perspective umbilicata, periostraco brunneo levissime induta, apice obtusula; anfr. 5, celeriter accrescentes, leviter et obsolete spiraliter carinata, in umbilico lirati, ultimus carinis

obsoletis quator, duabus supra et unica sub peripheriam, unica major ad peripheriam, liris sex (?) in umbilico; sutura impressa, apertura circularis. Alt. 2.2, lat. 2.5 mm"

Hab. Ceylon. Uda Pussellawa (*Preston*)

"At first sight this shell might be taken for a variety of *C. shevaroyanum*, Beddome, from the Salem district, to which it is very nearly allied. It is, however, smaller, differs in the relative proportion of height to breadth (a specimen I have of *C. shevaroyanum* measures . alt. 2.3, lat 3 mm.), and is of a thinner texture. The caninations above are also not so strongly marked, while the liræ in the umbilicus are stronger and appear to be more numerous" (*Sykes*.)

219 *Cyathopoma uvaense*, *Preston*.

Cyathopoma uvaense, *Preston*, *Rec Ind Mus* III, 1909, p 139, pl. 22, fig 10

Original description.—"Shell conoidal, greyish white, covered with a smooth chocolate-coloured periostracum, sculptured with fine spiral somewhat distant liræ, whorls $4\frac{1}{2}$, shouldered above, moderately convex, sutures impressed; umbilicus wide and deep, peristome almost continuous, white, very slightly reflexed; aperture subcircular

"Alt 3, diam major 3.5, aperture, alt. 1, diam. 1 mm" (*Preston*.)

Hab. Ceylon. Baudarawella, Province of Uva.

Subgenus **PSEUDOJERDONIA**, *Kobelt*

Pseudojerdonia, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p 227

TYPE, (1st species) *Cyathopoma garoense*, *Godwin-Austen*.

Range. India Assam

Differs from the Southern-Indian species of *Cyathopoma* in the thick operculum, excavated in the centre, resembling that of *Alycaeus*.

Systematic position uncertain. *Kobelt* thought it might have to be referred to *Alycaeus*

220. *Cyathopoma garoense*, *Godwin-Austen*.

Cyathopoma garoense, *Godwin-Austen*, *J A S. B.* xlv, part 2, 1876, p 188

Cyathopoma (Jerdonia) garoense, *Nevill*, *Hand List*, 1, 1878, p 260

Cyathopoma (Pseudojerdonia) garoense, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p 228

Original description.—"Shell openly umbilicated, turbinate, white, multilirate. Whorls 5, well rounded, there are six well marked longitudinal ribs on the last whorl, the interval between the 4th, 5th, and 6th being wider than that between the ribs above. Succeeding these below near the umbilicus can be counted

eight very close lines of ribbing, the whole surface between this ribbing is sharply and regularly striate, giving it rather a lace-like appearance. Spire conoid, apex high and papillate. Peristome simple, quite circular, single. Operculum exposed in front close to the margin of the aperture, multispiral, flat in front, thick and shelly in appearance. Animal not observed.

"Alt 0.08 [2 mm.], major diam 0.09 in. [2.25 mm.]." (*Godwin-Austen*)

Hab India. South Garo Hills, South Jaintia Hills, Assam (*Godwin-Austen*)

Is stated to be very like *C. decurrens* in the sculpture and position of the operculum.

221. *Cyathopoma jawaense*, *Godwin-Austen*

Cyathopoma jawaensis, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 182, pl. 8 A, fig. 6

Cyathopoma (Jeidonia) jawaense, Nevill, Hand List, 1, 1878, p. 260

Cyathopoma (Pseudojeidonia) jawaense, Kobelt, Das Tierreich, Lief. 16, 1902, p. 228.

Original description — "Shell narrowly umbilicated, turbinate, covered with a dark umber epidermis. Whorls $4\frac{1}{2}$, well rounded, with four well raised longitudinal ribs on the last, three shewing on the whorls above. Spire conical, apex papillate. Peristome simple, lip thin, aperture circular, the lirate ribbing extending up to the peristome so as to give it on the exterior margin an angular outline. Operculum pure white, situated close to the margin of the aperture, deeply concave in front, many whorled, with a small dark spot in the centre.

"Alt. 0.07 [1.75 mm.], major diam. 0.06 in. [1.5 mm.]."

"The animal has long pointed pale tentacles, with the eyes on the upper outer basal margin. The labial ribbon is very similar to that of *Diplommatina*, all the teeth being five-cuspid in the usual arrangement 3-1-3, with the central rather broad" (*Godwin-Austen*.)

Hab. India. Jawa, Nuga Hills, Assam (*Godwin-Austen*).

222. *Cyathopoma nevilli*, *Godwin-Austen*

Cyathopoma nevilli, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 182, pl. 8 A, fig. 5

Cyathopoma (Pseudojeidonia) nevilli, Kobelt, Das Tierreich, Lief. 16, 1902, p. 228

Original description — "Shell elongately turbinate, very closely umbilicated, covered with an olivaceous epidermis. Whorls $5\frac{1}{2}$, rounded with four well marked spiral ribs and one basal near the umbilicus. Apex blunt. Aperture rounded, peristome simple, continuous, very slightly thickened and reflected, operculum well within the aperture, slightly concave, minutely multispiral, with a large central plain area.

"A very large specimen measures alt. 0.11 [2.8 mm.], major diam. 0.08 [2 mm.], but some are only 0.07 in. [1.75 mm.] in alt. Animal not observed" (*Godwin-Austen*.)

Hab. India. Khasi and Naga Hills, Assam (*Godwin-Austen*).

Genus **MYCHOPOMA**, *Blanford*.

Mychopoma, Blanford, J. A. S. B. xxxviii, 1869, p. 131, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 45, Nevill, Hand List, 1, 1878, p. 260 (as subgenus of *Cyathopoma*), Fischer, Man. Conchyl. 1885, p. 745 (as section of *Cyathopoma*), Kobelt, Das Tierreich, Lief. 16, 1902, p. 228

TYPE, *Mychopoma hirsutum*, Blanford

Range. India, Comoros, New Guinea

Shell turbinate, generally covered with a thick, brown, hairy periostracum, aperture sometimes crenulated within. Operculum flat or nearly so, rather thick, with a marginal sulcation; composed of an external calcareous and an internal membranaceous layer, both multispiral and united by a spiral lamina at right angles to them, the spaces between the whorls vacant.

223 *Mychopoma hirsutum*, *Blanford*.

Mychopoma hirsutum (Beddome MS.), Blanford, J. A. S. B. xxxviii, 1869, p. 132, pl. 16, figs. 5-5 b (shell), 5 c, 5 d (operculum), Hanley & Theobald, Conch. Ind. 1875, pl. 136, figs. 1, 4; Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 45, Theobald, J. A. S. B. xlv, part 2, 1876, p. 185, id., Cat. Shells Brit. India, 1876, p. 38, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xix, 1897, p. 120, id., Cat. Pneum. 1899, p. 82, Kobelt, Das Tierreich, Lief. 16, 1902, p. 229

Cyathopoma (Mychopoma) hirsutum, Nevill, Hand List, 1, 1878, p. 260.

Original description — "Shell umbilicated, depressly turbinate, rather solid, covered with a thick dark coloured epidermis, which has strong raised decussated sculpture of spiral ridges and very close oblique costulation, at the periphery and around the umbilicus there is a fringe of close, rather long hairs, and the outer series continued on the inner whorls forms a sutural fringe also. Beneath the epidermis the shell is white with decussating lines, the spiral sculpture being more pronounced and the ribbing corresponding to the lines of growth less so than outside the epidermis. Spire convexly conoid, the apex prominent and papillar, suture deep, nearly concealed by the hairy fringe within. Whorls 5-5½, convex, the last cylindrical, descending but very little in front. Umbilicus pervious, exhibiting all the whorls, spirally ribbed, partly covered by the surrounding hairy fringe. Aperture diagonal, round, rather milky inside, with dark horizontal lines corresponding to the spiral ribs on the shell; the peristome is thick and double, curved backwards near the umbilicus, the internal portion with minute

pearly denticulations, largest on the outer (dextral) margin and gradually decreasing slightly in size on the upper and basal edges, vanishing entirely near the umbilicus, the external peristome is slightly expanded, the edge cut into minute teeth like those of a saw except on the inner or columellar margin. Operculum externally slightly concave, white, calcareous; the spiral sculpture obsolete near the centre in old specimens; internally membranaceous.

"Major diameter $8\frac{1}{2}$, minor 7, axis $5\frac{1}{2}$, diameter of the aperture $3\frac{1}{2}$ millim" (*Blanford*.)

Hab. India. Calcad Hills, Travancore (*Beddome, Bourdillon*), Tinnevely Hills (*Beddome*).

"This is a very curious and interesting species which, while differing in many respects from any known form, has marked affinities with shells belonging to distinct groups. Had the shell been discovered without the operculum, there could have been very little hesitation in considering it a large form of *Cyathopoma*; the sculpture and general shape are precisely those of the types of that genus, and in some species, such as *Cyathopoma filocinctum*, there is a thick epidermis, and also the very singular internal crenululation of the mouth, which is more marked in the present shell than in any allied species. The operculum, however, is totally different: instead of the whorls having the curious raised and incurved edges so characteristic of *Cyathopoma* they are flat and almost obsolete near the centre, on the outer surface, being far less distinct than in typical species of *Cyclotus*.

"The hairy fringe around both the periphery and the umbilicus so closely resembles that in *Cyclophorus* (*Oi aspedotropis*) *cuspidatus*, Beus., that there can be no question of a certain affinity between the two species, and there is considerable resemblance in their general form. The apertures, however, differ greatly, and there are marked distinctions in the operculum." (*Blanford*)

224. *Mychopoma limbiferum*, *Blanford*.

Mychopoma limbiferum, *Blanford*, J. A. S. B. xxxviii, 1869, p. 133, pl. 16, figs. 4-4 b (shell), 4 c, 4 d (operculum), p. 131, text-fig. 1 (dentition), *Hanley & Theobald*, *Conch Ind* 1875, pl. 136, figs. 2, 3; *Pfeiffer*, *Mon. Pneum. Cyathopoma (*Mychopoma*) *limbiferum*, *Nevill*, *Hand List*, 1, 1878, p. 260.

Lagochilus (s. str.) *limbiferum*, *Kobelt & Mollendorff*, *Nachr. Deuts. Malak. Ges.* xxix, 1897, p. 83, id., *Cat. Pneum.* 1899, p. 11.

Original description.—"Shell narrowly umbilicated, turbinate, thin, covered with a thick deciduous, yellowish brown epidermis, with dark spiral and oblique stripes or more frequently perhaps altogether dark brown, with a fringe of short hairs round the

umbilicus; beneath the epidermis, the shell is white with close spiral sculpture. In some specimens, as in *M. hirsutum*, there are oblique raised lines outside the epidermis, but they are not always conspicuous. Spire conical, suture deep. Whorls $5\frac{1}{2}$, convex, the last cylindrical, scarcely descending towards the aperture which is oblique and nearly circular. The peristome is much curved back, near the umbilicus, where it is almost simple and scarcely expanded elsewhere the outer portion is sharply reversed, forming a broad rim at right angles to the axis of the whorl on the outer and basal margins, while near the penultimate whorl it is produced in front. The inner portion of the peristome scarcely projects beyond the outer, it is corrugated within, but not nearly so strongly or closely as in *M. hirsutum*, and the corrugation is very faint towards the base, and entirely wanting at the angle of the aperture and on the columellar margin. Operculum thinner than in the last species, and the calcareous external portion less developed, and entirely wanting at the centre.

"Major diam. $5\frac{1}{4}$ -7, minor $4\frac{1}{2}$ -6, axis $4\frac{1}{4}$ - $5\frac{1}{4}$, apert diam. intus $2-2\frac{3}{4}$ millim."

Hab India: Pulney Hills, 7000 ft (*Fairbank*)

"A very different shell from the last, being much higher in the spire, with a broader edge to the mouth. The name is taken from the last peculiarity" (*Blanford*.)

225. *Mychopoma seticinctum*, *Beddome*.

Cyathopoma (*Jerdonia*) *seticinctum*, *Beddome*, P.Z.S 1875, p 449, pl 53, figs 23, 24.

Cyathopoma seticinctum, *Pfeiffer*, Mon. Pneum. Suppl. 3, 1870, p 382, *Theobald*, Cat. Shells Brit. India, 1876, Addenda, p 11.

Mychopoma seticinctum, *Hanley & Theobald*, Conch. Ind. 1876, p xiii, *Kobelt & Mollendorff*, Nachr. Deuts. Malak. Ges. xxx, 1898, p 120, id., Cat. Pneum. 1899, p 32; *Kobelt*, Das Tierreich, Lief. 16, 1902, p 230, fig. 48 (p 228).

Original description — "Shell moderately umbilicate, turbinate, rather solid, spirally lirate, furnished with a brownish epidermis, which has a minute vertical striation, very hairy along the periphery, and slightly so about the sutures, but otherwise glabrous, white beneath the epidermis; spire conical (not convex or depressed, as in *C. hirsutum*), whorls 6, convex, sutures deep, the lowest terete, descending a little rather suddenly in front, with 12-15 continuous raised spiral costulations between the suture and the keel of the umbilical region, two of which at the region of the periphery are more raised than the others, and furnished with very long patent dark brown hairs, and between these two there are one or rarely two less prominent beardless costulations, penultimate with six to seven costulations, the upper and lower sutures slightly hairy, antepenultimate with five or six, and the whole above it with two or three less prominent lines, the two apical whorls small and nearly smooth; umbilicus pervious, exhibiting all the whorls, not surrounded with a hairy fringe

outside (as in *C. hirsutum*), spirally ribbed within, and there furnished with a strong raised thread-like sinuate or curved sculpture (more prominent than that in the same region of *C. hirsutum*); aperture oblique, subcircular, peristome thick, double, the inner one pearly white inside and crenated (but less prominently than in *C. hirsutum*), outer one dilated on its outer and lower margins, particularly at its right apex and left base, and somewhat reflexed, more or less sinuate (but not with prominent crenations as seen in *C. hirsutum*); operculum double, externally concave, shelly, with a small transparent central nucleus. height $\frac{1}{4}$ inch [6.25 mm], greatest diameter $\frac{5}{16}$ inch [8 mm]."

Hab India Banks of Sholayar, Anamullay Mountains, 2000 ft. elevation (*Beddome*).

"Nearly allied to *Mychopoma hirsutum*, but not furnished with the same curious, raised, thread-like epidermis, except within the umbilicus, and without any umbilical fringe; it is, besides, a smaller, differently shaped shell, and differs in other minor points. It has exactly the operculum of *M. hirsutum*" (*Beddome*).

Subfamily PUPININÆ.

Section PUPINELLEÆ.

Genus PSEUDOPOMATIAS, Mollendorff.

Pomatias (part.), Pfeiffer, Mon Pneum Suppl 2, 1865, p 169

Pseudopomatias, Mollendorff, Nachr Deuts. Malak. Ges. xvii, 1885, p 164, id, Jahrb. Deuts. Malak. Ges. xiii, 1886, p 177, Kobelt & Mollendorff, Nachr Deuts. Malak. Ges. xxix, 1897, p 141, id., Cat. Pneum. 1899, p 37, Kobelt, Das Tierreich, Lief 16, 1902, p 272

Fargesia, Heude, Journ. Conchyl. xxxiv, 1886, p. 211.

TYPE, *P. amoenus*, Mollendorff.

Range India · Himalayas. Farther India, S. China.

Shell, turreted pyramidal, in form and sculpture resembling *Cochlostoma*, regularly ribbed, aperture slightly oblique, operculum thin, membranaceous, rather closely coiled

226. *Pseudopomatias grandis*, Godwin-Austen.

Pomatias grandis, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p 181, pl 7, fig 13, Nevill, Hand List, i, 1878, p 255

Pseudopomatias grandis, Mollendorff, Jahrb. Deuts. Malak. Ges. xiii, 1886, p. 179, Kobelt & Mollendorff, Nachr Deuts. Malak. Ges. xxix, 1897, p 141, id, Cat. Pneum. 1899, p 37; Kobelt, Das Tierreich, Lief 16, 1902, p 273

Original description — "Shell dextral, perforate, turreted, rather swollen below, solid, with moderately strong close costulation throughout, smooth on the penultimate whorl above the aperture, very close fine ribbing behind the aperture, covered with a thin epidermis, grey corneous or pale ochreous.

Spire rapidly decreasing to apex. Whorls 9, slightly convex, the last rounded below. Aperture vertical, circular. Peristome double, thickened, reflected, continuous, slightly angular at upper outer margin. Operculum thin, horny, indistinctly spiral in some specimens.

"Alt 0.55 [1.4 mm], diam 0.20 [5 mm], diam ap 0.17 in. [4 mm]."

Hab India. Shengorh Peak, Dafia Hills, Assam (*Godwin-Austen*)

"Its very large size distinguishes it at once from *P. himalayana* and *P. pleurophorus*, but it also differs in its more tumid form, the greater number of its whorls, its rounder aperture without the distinct small notch, and in not being so strongly costulated." (*Godwin-Austen*.)

Original description — "Testa subperforata, ovato-pyramidata, costis verticalibus validis confertis, interstitiis nitentibus, munita, albida, spina elongato-conica, apice obtusulo, sutura profundiuscula; anfractibus $7\frac{1}{2}$ convexis, ultimo $\frac{1}{4}$ testæ æquante, ad basin rotundato; apertura subcirculari, peristomate recto, acuto, margine columellari reflexiusculo, dextro arcuato

"Long 8, diam. $3\frac{1}{2}$ mill."

Hab. India Terin Ghat, Khasi Hills (Theobald).

231. *Pseudopomatias siyomensis*, Godwin-Austen.

Pseudopomatias siyomensis, Godwin-Austen, Rec. Ind. Mus. viii, 1917, p. 578, text-figs. 5 A, 6 C.

Original description — "Shell perforate, elongately turreted, attenuate, solid; sculpture well-defined strong costulation, more

pronounced and distant on last whorl, colour white; an old well-grown shell; spire long, sides flatly convex, fining to the apex which is sharp; suture impressed; whorls 9, flatly convex, aperture circular, vertical; peristome double, inner thickened, a slight nick on the upper sutural margin

"Major diameter 4.4, alt. axis 12.2 mm."

Hab. India. Siyom, Abor Hills (*Oakes*).

"Has much the shape of *P. grandis* of the Daffa Hills, but has much stronger costulation" (*Godwin-Austen*)

Genus **NODOPOMATIAS**, nom. mut.*

Eupomatias, Godwin-Austen, Rec. Ind. Mus. viii, 1917, p. 579 (non *Eupomatias*, Wagner, 1897).

TYPE, *Eupomatias sibbumensis*, Godwin-Austen.

Range. India. Abor Hills.

"Shell in all respects similar to *Pseudopomatias*, with similar costulation; peristome double, well developed, perforate, the costulation on the left side of the last whorl terminates upon a strong raised keel bounding the umbilical region; this keel extends up to the peristome on the lower basal side of the aperture"

"The keel has a knotted or beaded appearance, and it would seem that the mantle edge must develop a close fold, the costulation causing an irregular thickening of the peristome as it is added to." (*Godwin-Austen*)

232. *Nodopomatias oakesi*, *Godwin-Austen*

Eupomatias oakesi, Godwin-Austen, Rec. Ind. Mus. viii, 1917, p. 580, text-figs. 5 D, 6 B.

Original description:—"Shell narrowly perforate, elongately turreted, solid, shiny; sculpture close regular fine ribbing, on the last whorl in front only seen near suture, then becoming quite smooth, colour ruddy umber-brown in type, pale ochraceous in two others, spire elongate, sides slightly convex, apex rather blunt, suture impressed; whorls 7, flatly convex, aperture circular, angulate above, peristome thickened, closely double, continuous just behind on the columella margin, high up there is a very strong umbilical keel much curved, which terminates just behind the peristome on the lower left margin, it shows white against the brown colour of the shell, and is quite bead-like and raised, operculum horny, flat in front, multispiral, nucleus central

"Major diameter 3.75, alt. axis 11 mm" (*Godwin-Austen*.)

Hab. India. Abor Hills (*Oakes*).

* In allusion to the knotted appearance of the basal keel

233. *Nodopomatias sibbumensis*, Godwin-Austen

Eupomatias sibbumensis, Godwin-Austen, Rec. Ind Mus viii, 1917, p. 579, text-figs 5 c, 6 a.

Original description.—"Shell scarcely perforate, elongately turreted, solid, sculpture strong regular close costulation, which on last whorl terminates at the umbilical keel, colour not seen. shell bleached; spire elongate, sides nearly flat, apex pointed; suture shallow, whorls 9, sides flatly convex; aperture nearly circular, vertical, peristome double, continuous, the inner expanded and slightly reflected on the left side; a well-marked umbilical keel commences on the lower side of the last whorl in front and curving to the left extends to the lower margin behind the aperture.

"Major diameter 5·8, alt axis 14·5 mm." (Godwin-Austen.)

Hab. India. Sibbum, Yamne Valley, Abor Hills (Oakes).

Pneum. 1899, p 38 (as subgenus of *Rhaphaulus*), Kobelt, Das Tierreich, Lief. 16, 1902, p. 277.

TYPE, *Anaulus bombycinus*, Pfeiffer

Range India, Farther India, Borneo.

Shell umbilicated, elongate ovate or cylindrical, generally somewhat depressed, with a dark peristomium; peristome thickened, double, provided with two tubes, open at both ends, one on the columellar margin, the other at the suture. Operculum thin, corneous, narrowly coiled, slightly concave.

Col. Godwin-Austen (*l. c.* p 196) considers that *Streptaulus* cannot be regarded as generically or even subgenerically distinct, as he found the animal did not differ from that of *Rhaphaulus*,

the chief point of difference being confined to a single character—the position and form of the sutural tube at its terminal end. The form of this tube appears to vary even in the same species, being sometimes upright, at others directed downwards

234 *Rhaphaulus aborensis*, *Godwin-Austen*.

Rhaphaulus aborensis, Godwin-Austen, Rec Ind Mus viii, 1917, p. 571, text-fig 2 c

Original description —“Shell elongately cylindrical, solid, not flattened in front, closely rimate; sculpture regularly and very closely costulate, colour bleached; spire high, rather inclined to the right, apex pointed, suture moderately impressed; whorls 6, swollen, sides convex, aperture circular, peristome thickened, continuous, the sutural tube turns obliquely downward from the upper outer margin and widens out gradually; in two specimens out of four it is horizontal.

“Major diameter 7·25, minor 7·0, alt. axis 14·0 mm” (*Godwin-Austen*)

Hab. India Abor Hills (*Oakes*); Mimi Hills (*Wahab & Lewis*).

Four specimens from Rotung are stated to be smaller and more tumid, the largest measuring 12·5 × 6·5 mm.

235. *Rhaphaulus assamicus*, *Godwin-Austen*.

Rhaphaulus assamica, Godwin-Austen, Land & Freshw. Moll India, i, 1886, p. 201, pl. 47, fig. 2, Smith, Proc. Malac. Soc. iii, 1898, p. 18

Rhaphaulus assamicus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 142, id., Cat. Pneum. 1899, p. 38, Kobelt, Das Tierreich, Lief. 16, 1902, p. 275

Raphaulus ussamica, Godwin-Austen, Rec Ind. Mus viii, 1917, p. 570, text-fig. 1 A.

Original description —“Shell elongately cylindrical, solid, rather tumid, flattened on the frontal surface of the penultimate whorl; sculpture regularly closely costulate; colour dull umber-brown, suture moderately impressed, whorls 6, penultimate the largest with sides flat, the next much smaller and convex, aperture perpendicular, peristome very thick, double, both continuous, but the outer only has a thin callus on the whorl

“The sutural tube has its origin on the upper outer margin close upon the outer lip, is colourless, and turns sharp downwards behind it, extending to nearly the height of the last whorl. This peristomial tube is not a tube in the strict sense of the term, but in section is semicircular, an arch resting upon the body-whorl, which forms the diameter. An inner sutural tube follows the suture backwards, it opens internally 3 mm. within the aperture, it is indistinctly shown on the exterior, but the lines of costulation extend over it, differing thus from what is seen in the similar tube in *Streptaulus blanfordi*, Bs.

- "Operculum horny, of 8 close-wound whorls; origin central
 "Largest: major diam 8.3, diam ap. 4, alt. axis 1.675 mm.
 Smallest: " " 5, " 3.8, " " 1.32 mm "
 (Godwin-Austen.)
Hab. India Brahmapund, Assam (Ogle), Miri Hills (Lewis).

Original description:—"Testa umbilicata, oblonga, polita, regulariter oblique striata, stris prope suturam submarginatam fortioribus, lineis nonnullis spiralibus decussatis, fusco-cornea, translucens; apice obtusiusculo, anfractibus 5 convexiusculis, penultimo ventricosiori, apertura magna, subcirculari, peristomate simplici, reflexo, subrevoluto, marginibus callo parietali tenui junctis, tubuli suturalis parte externa longa, pone junctionem labri breviter arcuatum elevata; suturam subius exhibente; umbilico impervio.

"Long. $7\frac{1}{2}$, diam 5 mill. Long. apert. (peristomate incluso) 4 mill." (Benson.)

Hab. Sikkim Darjeeling (*H. Blandford*, *Mamwaring*) Assam Dafia Hills (*Blandford*), Brahmapund (*Godwin-Austen*), Harmutti, Tanu Ridge, and Dikrang Valley (*Godwin-Austen*)

Godwin-Austen states that the true typical form ranges from 1000 to 4000 ft in these hills

The shell described as *Helix calpis* by Benson—sent to him by Blandford—proved to be an immature specimen of *Rhaphaulus blanfordi* according to a note by the latter in 1880 *

* J. A. S. B. xlix, 1880, p. 211.

Var. *intubus*, Godwin-Austen

Streptaulus blanfordi, var. α , Godwin-Austen, J. A. S. B. xlv, part 2 1876, p. 180, pl. 8 A, fig. 3

Rhaphaulus blanfordi, var. *intubus*, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 202, pl. 47, fig. 5.

Rhaphaulus (Streptaulus) blanfordi, var. *intubus*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 142, id., Cat. Pneum. 1899, p. 38.

In this form the internal tube opens on the peristome outwards, with no tendency to form an external sutural tube.

Hab. India: Shengorh Peak, Daffa Hills

Var. *tubulus*, Godwin-Austen

Streptaulus blanfordi, var. *tubulus*, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 180, pl. 8 A, fig. 4

Rhaphaulus blanfordi, var. *tubulus*, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 202, pl. 47, fig. 6

Rhaphaulus (Streptaulus) blanfordi, var. *tubulus*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 142, id., Cat. Pneum. 1899, p. 38

Original description —“The internal tube passes out just behind the peristome, almost in the same way as in *Rhaphaulus chrysalis*, Bs., and is directed upwards for about 0.05 of an inch [1.25 mm.].”

Hab. India: Toruputu Peak, 5000 ft., Daffa Hills, Assam (Godwin-Austen).

Var. *tortuosa*, Godwin-Austen.

Rhaphaulus blanfordi, var. *tortuosus*, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 202, pl. 47, fig. 7 (no description)

To judge by the figures, this variety appears to differ from the type and the other varieties in having a higher and more attenuated spine, while the tube behind the peristome passes downwards instead of upwards. An abnormal form is figured on the same plate, fig. 8, in which the tube appears to slope down the last whorl at an angle of about 60°.

Hab. India: Damsang Peak, Western Bhutan Hills

237. *Rhaphaulus chrysalis*, Pfeiffer.

Cyclostoma chrysalis, Pfeiffer, Proc. Zool. Soc. 1852, p. 158, id. Conch.-Cab., Cyclostomaceen, 1853, p. 239, pl. 31, figs. 23, 24 (*C. chrysalis*)

Pollicaria chrysalis, Gould, *Proc. Boston Soc. Nat. Hist.* vi, 1856, p. 14.

Original description.—"C. testa umbilicata, distorto-ovata, solida, striatula et punctato-malleata, fusco-carnea, spira irregulariter ovata, apice conoidea, acutiuscula; sutura levi; anfract. 6 convexiusculis, penultimo latere aperturali planulato, ultimo

Fig. 24.—*Rhaphaulus chrysalis*

angustiore; apertura verticali, circulari; perist. crasso, dilatato, patente, reflexo, margine supero linea horizontali adnato.—Operculum?

"Long 16, diam. 9 mill." (*Pfeiffer*.)

Hab. Burma. Ava (*Benson*), Moulmain (*Stoliczka*, *Hungerford*, *Theobald*, *Richtofen*, *Fer*).

The accompanying figures have been drawn from the type in the Cuming Collection of the British Museum. It measures alt. 15.5, diam. $9\frac{1}{2}$ mm.

238 *Rhaphaulus luyorensis*, *Godwin-Austen*

Streptaulus luyorensis, *Godwin-Austen*, *Rec. Ind. Mus.* viii, 1917, p. 573.

Original description.—"Shell umbilicated, *Pupina*-like, solid, shining, sculpture fine close shallow striation, colour pale ochraceous; spire fairly high, apex blunt and rounded; suture impressed; whorls 6, 4th and 5th the largest and nearly equal in diameter, aperture circular, peristome thickened, reflected, with a callous on the body-whorl, the sutural tube flattened, follows the suture and is perforated finely at intervals.

"Major diameter 4.75, alt. axis 8 mm."

Hab. India. Luyor Valley (*Oakes*).

"This a close ally of *R. blanfordi*, but can be distinguished at once by its much more tumid form and blunt apex. It is far nearer to the Sikim shell than the one which has been described as *R. murensis*." (*Godwin-Austen*.)

239. *Rhaphaulus mirrensis*, Godwin-Austen

Stieptaulus mirrensis, Godwin-Austen, Rec Ind Mus. viii, 1917,
p 573

Original description:—"Shell cylindrical, pupiform, strongly excavated and keeled on umbilical region; sculpture very fine transverse regular striation; colour bleached, spire high, apex conic; whorls 6, the 4th with the greatest diameter, sides flatly convex, the aperture circular, peristome thickened, not continuous on upper margin

"Major diameter 5, minor 5, alt. axis 9 + mm" (*Godwin-Austen.*)

Hab India Miri Hills (*Oakes*)

The only specimen received was unfortunately crushed before the description was complete. The sutural tube is stated to be exactly like that of *Rhaphaulus blanfordi* of Sikkim, *i. e.* "a narrow flat band running back along the suture with here and there minute perforations" Fortunately the two species had been compared, and the Miri shell was found to be "quite distinct, that the antepenultimate whorl was the largest and the sculpture very much finer, the deep excavation at the umbilicus was another very remarkable character."

240. *Rhaphaulus oakesi*, Godwin-Austen

Rhaphaulus oakesi, Godwin-Austen, Rec. Ind Mus viii, 1917,
p 572, text-fig 2 d.

Original description —"Shell cylindrical, rimate, solid; sculpture very fine and regular costulation, colour dark ochraceous; spire moderately high, apex blunt; whorls 5, penultimate, somewhat flattened in front, sutural tube horizontal, operculum horny, flat in front, of about 6 whorls.

"Major diameter 7, minor 6.5, alt axis 13 mm." (*Godwin-Austen.*)

Hab. India Abor Hills (*Oakes*)

241. *Rhaphaulus pachysiphon*, Theobald & Stoliczka

TYPE, *Cataulus templemani*, Pfeiffer

Hab. Southern India, Ceylon.

Last whorl not solute.

248. *Tortulosa albescens*, Blanford

Cataulus albescens, Blanford, J A S B xlix, 1880, p. 214, Kobelt & Mollendorff, Nachr Deuts. Malak. Ges. xxix, 1897, p. 143; id, Cat. Pneum. 1899, p. 89.

Tortulosa (Eucataulus) albescens, Kobelt, Das Tierreich, Lief 16, 1902, p. 282.

Original description — "Shell subperforate, subovately turreted, rather thin, whitish horny, rather sinuately and costulately striated. Spire turreted, with the sides convex, apex obtuse, suture much impressed. Whorls 7, convex, the last more closely wound than the penultimate, to which it is but slightly attached just behind the mouth. Basal keel transversely striated, subobsolete on the body-whorl near the junction of the peristome, becoming stronger in front and dilated near the mouth, the space inside the keel and around the umbilicus is of moderate size and plicately striated. Aperture nearly circular and subvertical, with the opening of the basal canal to the left of the base, and in nearly the same plane as the aperture. Peristome white, thickened, expanded and turned

back, produced slightly above to the right of the penultimate whorl, and to a greater extent below at the mouth of the canal, columellar margin a little narrower, joined for a short distance only to the penultimate whorl.

"Length 0.53 [13 mm.], major diameter 0.22 [5.5 mm.], minor 0.18 [4.5 mm.], breadth of the aperture within 0.12 inch [3 mm.]." (*Blanford*)

Hab India. Mynall, near Trevandrum, Travancore (*Bourdillon*)

Fig 26 — *Tortulosa albescens*

Differs from *T. calcadensis*, with which the species has been confused, in having one whorl less, and being much smaller, with proportionately shorter whorls, the sculpture is less close and distinct, the colour whitish instead of golden brown, the basal keel less developed, and its opening is in the same plane as the aperture, instead of being turned downwards. From *T. costulata* it is chiefly distinguished by its much finer sculpture and by the characters of the basal keel.

The accompanying figures have been drawn from a specimen in the general collection of the British Museum. Its measurements are. alt 13.5, major diam. 5 mm. The species has not before been illustrated

Tortulosa (Eucataulus) blanfordi, Kobelt, Das Tierreich, Lief. 16, 1902, p. 283.

Original description — "Testa subperforata, ovato-fusiformis, solida, confertim striata, parum nitens, rufa; spira convexo-turrita, apice obtusiusculo; anfr. 9, convexiusculi, ultimus attenuatus, antice subascendens; carina umbilicalis compressa, valida, antice vix dilatata; periomphalum angustum, costulato-striatum, apertura subcircularis, peristomium aurantiaco-fuscum, incrassatum, valde expansum, reflexum, ad anfractum penultimum angustatum, margine dextro protracto, basali recedente, canali angusto perforato. Operculum tenue, corneum.

"Long 20-21½, diam 6-7, ap. intus diam 3½, cum perist. long 6½-7 mill." (*Dohrn*)

Hab. Ceylon. Bollegalle, near Kandy (*Blanford*)

252. *Tortulosa calcadensis*, *Blanford*.

Cataulus calcadensis (Beddome MS.), Blanford, J. A. S. B. xxxviii, 1869, p. 137, pl. 16, fig. 8, Hanley & Theobald, Conch. Ind. 1875, pl. 106, fig. 10, Theobald, J. A. S. B. xlv, 1876, p. 185, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 141, Reeve, Conch. Icon, xx, Pupinidae, 1876, pl. 6, fig. 50, Nevill, Hand List, i, 1878, p. 298, Blanford, J. A. S. B. xlix, 1880, p. 215, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 143, id., Cat. Pneum. 1899, p. 39.

Tortulosa (Eucataulus) calcadensis, Kobelt, Das Tierreich, Lief. 16, 1902, p. 283.

Cataulus kalkadensis, Theobald, Cat. Shells Brit. India, 1876, p. 41.

Hapalus tiavanhoricus, Theobald, J. A. S. B. xlv, part 2, 1876, p. 186, pl. 14, fig. 5, Blanford, op. cit. xlv, part 2, 1880, p. 215 (juv.), Gude, Fauna Brit. Ind., Moll. ii, 1914, p. 504.

Original description — "Shell subperforate, fusiformly turritid, solid, closely and rather sinuously costulated. Spire ovately turritid, apex rather acute, suture much impressed. Whorls 8½, convex, the last a little smaller, quite free from the other whorls for a short distance behind the mouth, but not descending much, not nearly so far as *C. tortuosus* is represented as doing. The basal keel is strong, compressed, transversely ribbed, and becoming larger in front, the space inside the keel around the umbilicus is of moderate size and ribbed. Aperture nearly circular and almost vertical, the opening of the basal canal being at the left side and not in the same plane as the aperture, but turned a little downwards and to the right. Peristome thickened, double, the inner portion obtuse, the outer expanded, turned back, produced below the canal and above near the suture, narrower on the inner margin and not touching the penultimate whorl. Operculum unknown.

"Length 16-21, major diameter (peristome included) $5\frac{3}{4}$ -7, minor 5 - $6\frac{1}{2}$, width of aperture inside 3 - $3\frac{1}{2}$ mm.

"Length of the aperture and outer peristome in the larger specimen from the base of the canal to the end of the projection above $6\frac{1}{2}$ mill."

Hab. India. Calcad Hills, Travancore (*Beddome*).

"At first sight, this shell bears a most striking resemblance to *C. tortuosus*, Chemn., but the last whorl is much less produced, and there appear, judging from the description and figures of Chemnitz's species, to be several slight but not unimportant distinctions in sculpture and form. Amongst the Ceylonese species, the nearest approach to the present is made by *C. decorus*, Bens, and *C. blanfordi*, Dohrn, but no Ceylonese kind is known with the last whorl free. The previously described *Catantulus* from the base of the Anamullay Hills resembles *C. calcadensis* in the sinistral position of the keel, a character not noticed by Pfeiffer in his description." (*Blanford*.)

In 1880 (*loc. cit.*) Blanford recorded the receipt of fresh living specimens from Col Beddome of a golden-brown colour, with the aperture of the same tint as the shell. The peristome in these specimens was not free from the last whorl, the operculum was found to be normal and precisely similar to that of Ceylonese species of the genus.

At the same time Blanford stated that he was satisfied that the specimens described by Theobald as *Hapalus travankoricus* were immature shells, and he believed them to be the young of *C. calcadensis* or some nearly allied species.

253. *Tortulosa colletti*, Sykes

Catantulus colletti (Sykes), Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 143 (nom. nud.), Sykes, Proc. Malak. Soc. iii, 1898, p. 69, pl. 5, fig. 15, Kobelt & Mollendorff, Cat. Pneum. 1899, p. 89.

Tortulosa (*Trucatantulus*) *colletti*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 288, text-fig. 63 (aperture).

Original description.—"Testa breviter et profunde rimata, elongata-pyramidalis, solida, substriata, castanea; spira elongata, apice obtusulo; sutura submarginata; anfr. 8 - $8\frac{1}{2}$, plano-convexi, ultimus parum attenuatus, carina umbilicalis valida, compressa, periomphalum latum, costulato-striatum, apertura subcircularis, peristoma incrassatum et reflexum, basi productum, canali mediocri perforatum.

"Alt. 23, diam. 8 - 2 mm."

Hab. Ceylon. Matale, 1200 ft (*Collett*).

"A species belonging to the same group as the last [*C. nevilli*], but it is narrower, the whorls are flatter, the striæ almost obsolete, the base of the lip projects a little forward, and the notch lies a shade more to the right." (*Sykes*.)

254. *Tortulosa congener*, Sykes

Cataulus congener, Sykes, Journ Malac xii, 1905, p 57, text-fig. 4.

Original description.—"Shell elongately pyramidal, rimate, yellow, becoming tinged with red-brown on the earlier whorls, these latter are smooth, while the rest of the shell is closely, finely, longitudinally striate, suture well impressed, whorls $7\frac{1}{2}$, convex, umbilical region moderate in size, sculptured as the rest of the shell; aperture subcircular, lip white, double, the outer part well reflected and thin at the edge, slightly produced at the right upper margin, the inner part circular and produced; basal canal small, the canina being whitish.

"Alt. 16 5, diam. max. (last whorl) 6 mm."

Hab Ceylon.

"Resembling in form a dwarf *C. aureus*, but separable by *inter alia* the shape of the outer lip and the duplication of the lip, as also by the small basal canal" (*Sykes*)

255 *Tortulosa connectens*, Fulton.

Cataulus connectens, Fulton, Journ Malac x, 1903, p 102, pl. 9, fig. 4, Sykes, ep cit xii, 1905, p. 55

Original description.—"Shell fusiform, oblong, solid, narrowly perforate, dark reddish-brown, whorls $9\frac{1}{2}$, obliquely striated, lower slightly convex, earlier whorls almost straight, the last carinated at the base; aperture circular, pale reddish-brown within, peristome continuous, yellow, thickened and reflexed, an egg-shaped opening to basal canal. Operculum normal

"Major diam. (including peristome) $8\frac{1}{2}$, alt. 21 mm." (*Fulton*)

Hab. Ceylon Watawala (*Collett*)

Stated to be closely allied to *blanfordi*, Dohrn, and *decorus*, Bens., but readily separable from the former by its yellow peristome, from the latter by its smaller size and more slender form, and from both by the peristome being more in line with, or under, the whorls

Mr. Sykes considers it to be only a local race of *blanfordi* with yellow peristome.

256. *Tortulosa costulata*, Blanford

Cataulus costulatus, Blanford, J A S B. xlix, 1880, p 213, pl 3, fig 7, Kobelt & Mollendorff, Nachr Deuts Malak Ges. xxix, 1897, p 143; id, Cat. Pneum 1899, p 39

Tortulosa (*Eucataulus*) *costulata*, Kobelt, Das Tierreich, Lief. 16, 1902, p 283.

Original description — "Shell subperforate, subovately turreted solid, rather coarsely and subsinuately costulated, of a pale straw-

colour. Spire turreted, with convex sides, apex rather obtuse, sutures well impressed. Whorls $7\frac{1}{2}$, convex, the last more closely wound than the penultimate, to which it is scarcely attached just behind the mouth; the basal keel compressed, costulate, dilated in front; the space inside the keel and around the umbilicus is of moderate size and ribbed. Aperture nearly circular and subvertical, with the opening of the basal canal on the left side of the base, and not quite in the same plane as the aperture, but turned rather downwards. Peristome white, thickened, expanded, and turned back, produced above to the right of the penultimate whorl and below around the canal, narrow on the columellar margin, and only united for a short distance with the penultimate whorl.

"Length 0.65 [16 mm.], breadth (including the peristome) 0.25 [6.25 mm.], minor diameter from front to back 0.23 [5.75 mm.], width of aperture inside 0.13 [3.25 mm.] inch."

Hab. India: Tinevelly Ghats (*Beddome*)

"This species of *Cataulus*, the third hitherto obtained from the hills of Southern India, is distinguished from all other known forms of the genus by its comparatively coarse ribbing across the whorls. In other respects, it closely approaches *C. calcadensis*, Bedd, . . . having a similarly shaped spire, aperture, and basal channel. I have only seen one specimen of *C. costulatus*; this differs from *C. calcadensis* not only in having stronger sculpture, but also in being rather shorter and in having one whorl less in the spire. The colour of *C. costulatus* also is paler than that of the Calcad shell, and the lip of the aperture is white.

"Like the other Southern-India forms, *C. calcadensis*, *C. recurvatus*, and the species hereafter described [*C. albescentis*], *C. costulatus* has the canal a little to the left of the lowest portion of the aperture, or nearer to the umbilicus than to the outer margin. In most Ceylonese species of the genus the canal is nearly at the lowest portion of the mouth (it is slightly to the left in *C. pyramidalis*, *C. eurytrema*, and *C. austermani*; basal in the smaller forms, like *templemanni* and *C. layardi*). I find that in *C. tortuosus* the position of the canal is precisely as in *C. calcadensis* and *C. costulatus* (in *C. recurvatus*, the sinistral position of the canal is much more marked)." (*Blanford*)

257. *Tortulosa cumingi*, Pfeiffer.

Cataulus cumingi, Pfeiffer, Proc. Zool. Soc. 1856, p. 339, id., Novit. Conch. ser. 1, i, 1857, p. 91, pl. 25, figs. 16, 17, id., Mon. Pneum. Suppl. 1, 1858, p. 87, Theobald, Cat. Shells Brit. Tortulosa (Eucataulus) marginata, Kobelt, Das Tierreich, Lief 16, 1902, p. 286

Original description —“T. vix perforata, subfusiformi-turrita, solida, subarcuatum costulato-striata, opaca, fusco-lilacea, strigis angulosis albidis marmorata, spira subcurvilinearis, turrita, apice obtusa; sutura levis, filomarginata; anfr. 8 planiusculi, ultimus vix attenuatus; carina basalis alba, compressa, antrosum subdilata, apertura verticalis, subovalis, perist album, duplex: internum basi profunde incisum, externum patens, ad canalem mediocrem retractedum.

‘Long 16, diam. $5\frac{1}{2}$ mill Ap. intus 4 mill longa, $3\frac{1}{2}$ lata.’ (Pfeiffer.)

Hab Ceylon: Newera Ellia (Nevill)

Var. crenulata, Fulton.

Cataulus marginatus, var *crenulata*, Fulton, A M N H. ser. 7, xii, 1904, p 453, Sykes, Journ Malac xii, 1905, p 55

“Slightly broader than typical *marginatus*, less strongly malleated, and lacking the distinctly margined suture of that species, of a light reddish colour, and crenulated at and below the suture of the middle whorls, the antepenultimate showing it more distinctly.

“Maj. diam 6, alt 15 mm.” (Fulton.)

Hab. Ceylon.

Var. notata, Sykes.

Cataulus marginatus, var. *notata*, Sykes, Journ. Malac. xii, 1905, p. 57, text-fig 3

“Shell larger than the typical form, shape more pyramidal; whorls more flattened; longitudinal striation almost absent; the malleation in the variety is much stronger, especially on the last half of the last whorl, where a second carina, above the normal one, is often present, leaving a smooth area between them; mouth duplex, pale flesh-colour

“Alt. 17, diam max (last whorl) 5.5 millim” (Sykes.)

Hab. Ceylon

265. *Tortulosa nevilli*, Sykes.

Cataulus nevilli, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. **xxix**, 1897, p. 143 (nom. nud.), Sykes, Proc. Malac. Soc. **iii**, 1898, p. 68, pl. 5, fig. 16, Kobelt & Mollendorff, Cat. Pneum. 1899, p. 39, Sykes, Journ. Malac. **xii**, 1905, p. 55.
Tortulosa (*Eucataulus*) *nevilli*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 286

Original description — “Testa anguste et profunde imata, pyramidata, solidula, eleganter costulato-striata, brunnea, spira elevata, apice obtusulo, sutura impressa; anfr. 8, convexi, ultimus non attenuatus: carina umbilicalis valida, compressa, periomphalum mediocre, costulato-striatum; apertura subcircularis; peristoma rubro-castaneum, continuum, incrassatum et valde reflexum, basi productum, canali mediocri perforatum.

“Alt. 23.6, diam. max. 9.5 mm” (*Sykes*)

Hab. Ceylon: Ambepusse (*Collett*), Kegalla (*Preston*).

The nearest ally is stated to be *C. austenianus*, Benson; but the present species appears to differ in being more elongate, in having the whorls more convex, the lip of a different colour and attached to the shell at a different angle, while the notch is more vertical and not so much to the left as in *C. austenianus*.

Var. *flaveola*, Fulton.

Cataulus nevilli, var. *flaveola*, Fulton, A. M. N. H. ser. 7, **xiii**, 1904, p. 453, Sykes, Journ. Malac. **xii**, 1905, p. 55

“Lighter coloured and with a yellow peristome, the latter being more on a plane with the spire than in typical *nevilli*, which is generally somewhat produced forward at the basal portion.

“Maj. diam. 11, alt. 25 mm.” (*Fulton*.)

Hab. Ceylon

266. *Tortulosa nietneri*, Nevill.

Cataulus nietneri, Nevill, J. A. S. B. **xxix**, part 2, 1871, p. 7, pl. 1, fig. 7, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 142, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 5, Reeve, Conch. Icon. **xx**, Pupundæ, 1876, pl. 6, fig. 48 (*nietneri*), Theobald, Cat. Shells Brit. India, 1876, p. 41, Nevill, Hand. List, 1, 1878, p. 297, Jousseaume, Mém. Soc. Zool. France, **vii**, 1894, p. 309, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. **xxix**, 1897, p. 143, Sykes, Proc. Malac. Soc. **iii**, 1898, p. 68, Kobelt & Mollendorff, Cat. Pneum. 1899, p. 39, Collett, Journ. Malac. **vii**, 1899, p. 86, text-fig. A; Sykes, Journ. Malac. **xii**, 1905, p. 55

Original description :—“T. parva, subfusiformis, vix perforata apice sub-obtusa; supra pallide-straminea, infra virescente grisea et irregulariter albedo strigata, anfractibus 6, convexiusculis primis duobus vel tribus lævigatis, ceteris transversim costulato

striatus, ultimo antice subapplanato, ad basin acute carinato; apertura circulari, peristomate albido, incrassato ac reflexo, intus ad basin anguste canaliculato. Operculum normale

"Long. 11, diam. $4\frac{1}{2}$, alt. apert. 4, diam. apert. $3\frac{1}{2}$ mm."

Hab. Ceylon.

"This is the smallest species of the genus as yet described, it is also composed of fewer whorls, the last being peculiarly somewhat flattened, the sculpture is obsolete on the first three, just discernible on the fourth and very distinct on the last two whorls; the notch at the base of the peristome is less conspicuous than in the other species of the genus, the shell is of a straw-colour, irregularly marbled and streaked with greenish zigzag markings; the operculum is of a light horny texture, composed of about 6 whorls." (*Nevill*)

Var. caperata, Collett.

Cataulus nietneri, var. *caperata*, Collett, Journ. Malac. vii, 1899, p. 86, text-figure C; Sykes, op. cit. xii, 1905, p. 55.

"Shell larger and more solid than the type. Whorls more rounded and sutures deeper. Apex smooth and horny. The rest of the shell closely and strongly wrinkled all over, excepting the small flattened portion of the last whorl immediately above the peristome. Operculum as in the type.

"Alt. 18, diam. max. 7 mm." (*Collett*)

Hab. Ceylon. Ambegamuwa and Balangoda (*Collett*)

Var. unicolor, Collett

Cataulus nietneri, var. *unicolor*, Collett, Journ. Malac. vii, 1899, p. 86, text-fig. B, Sykes, op. cit. xii, 1905, p. 55.

"Shell larger and more elongated than the type. Whorls more solid, more densely striated and more roughened. Apex golden and horny. The rest of the shell very pale yellow throughout. The conspicuous white flames which ornament the typical form and var. *caperata* are entirely absent in the present variety, which is rare. Operculum normal.

"Alt. 17, diam. max. 6.5 mm." (*Collett*)

Hab. Ceylon. Ambegamuwa (*Collett*).

267 *Tortulosa prestoni*, Sykes

Cataulus prestoni, Sykes, Journ. Malac. vii, 1905, p. 56, text-fig. 2.

Original description.—"Shell nearly related to *C. aureus*, but differing in the following characters. Colour straw-yellow rather than golden yellow, size smaller; whorls not so inflated, umbilical region more rounded, lip not so produced at the base, not so much reflected, and not so 'winged' at the upper right margin; canal smaller.

"Alt. 10.8, diam. max. (of last whorl) 8 millim." (*Sykes*.)

Hab. Ceylon.

- Tortulosa (Eucataulus) recurvata*, Kobelt, Das Tierreich, Lief 16, 1902, p 287

Original description.—"I breviter et profunde rimata, ovato-turrita, solida, distincte subarcuato-striata, virenti-fulva, spira regulariter attenuata; sutura profunda, simplex, anfr. 7, summi rubescentes, 3 ultimi convexi, ultimus antice subascendens, basi carina compressa antice dilatata munitus periomphalum angustum, costulato-striatum; apertura subcircularis, ad basin interrupta et canali perlato aucta; perist duplex, internum porrectum, basi fissum, externum patens et reflexum, parte canalem formante recurvata

"Long 23, diam. 10 mill" (*Pfeiffer*)

Hab. India Anamullay, Nilgiris.

270. *Tortulosa rugosa*, *Fulton**Cataulus rugosa*, Fulton, A M N H ser 7, xii, 1904, p 452.*Cataulus rugosus*, Sykes, Journ Malac. xii, 1905, p 55.

Original description:—"Shell very narrowly umbilicate, sub-fusiform, moderately solid, colour light yellowish brown, nucleus smooth, sculptured below with somewhat nodulous oblique stræ, which give a malleated appearance to the shell; whorls $6\frac{1}{2}$, moderately convex; basal carina moderately produced; aperture circular, reddish brown within, peristome yellowish, continuous, basal canal semicircular, situate at centre of basal portion of the peristome.

"Max. diam. 5, alt. $11\frac{1}{2}$ mm"

Hab. Ceylon.

Fig. 27 — *Tortulosa rugosa*

"This form is nearest to *C. marginatus*, but is much smaller, not so slender, and the suture is not margined" (*Fulton*)

The accompanying figures have been drawn from the type in the British Museum

271. *Tortulosa smithi*, *Sykes*.*Cataulus smithi*, Sykes, Journ Malac. xii, 1905, p. 56, text-fig 1

Original description —"Shell deeply rimate, solid, straw-yellow, the protoconch a trifle darker, pyramidal, with the spire well raised, the earlier whorls smooth, and the residue sculptured by numerous, closely-set, fine longitudinal costulæ, suture well impressed; whorls 8, plano-convex, the last being a little compressed in front, umbilical region large, sculptured as the rest of the shell; the umbilical carina is large and distinct, with a second smaller one within, lip white continuous, subcircular, slightly projecting at the base, reflected, most noticeably so at the lower outer margin, canal large

"Alt. 26.5, diam. max (of last whorl) 10.5 mm"

Hab. Ceylon.

"As compared with *C. aureus* the present shell is straw-yellow and not golden yellow in colour, it is much larger with flatter whorls, the mouth is subcircular and lacks the angle at the upper right hand margin, etc. From *C. austrianus* the shape and colour of the mouth and lip, as also the elongate form, will suffice to sever it similar variations distinguish it from the white-lipped var. of *C. hemastoma*. I would lay stress on the second carina at the base" (*Sykes*.)

272. *Tortulosa sykesi*, *Fulton*

Cataulus sykesi, Fulton, A. M. N. H. ser. 7, xiii, 1904, p. 453;
Sykes, Journ. Malac. xii, 1905, p. 55.

Original description.—"Shell narrowly umbilicate, subfusiform, solid, uniform light yellowish to uniform reddish-brown colour, arcuately striated, the striae rather blunt and not very conspicuous; whorls nearly 7, slightly convex; basal carina prominent, with a conspicuous inner ridge, aperture subcircular, reddish brown within, peristome whitish, very much thickened but scarcely duplex, continuous; aperture of basal canal subcircular, situate slightly to the left of the centre of base of peristome.

"Max. diam. (yellow form) $6\frac{1}{2}$; alt. $14\frac{1}{2}$ mm.
" (reddish-brown form) $6\frac{1}{2}$, alt. 14 mm."

Hab. Ceylon.

Fig. 28 — *Tortulosa sykesi*

"This form bears a general resemblance to *C. duplicatus*, Pfr., but is smaller, has less whorls, and the suture of the earlier whorls is not margined as in that species." (*Fulton*)

The shell shown in the accompanying illustration is one of the co-types in the British Museum. It shows the operculum *in situ*, better than the type

273. *Tortulosa templemani*, *Pfeiffer*.

Range Burma, Farther India.

Shell distortedly ovate, penultimate whorl flattened in front; aperture circular, with an internal callus, sinuate above, separated

from the left margin of the peristome by a deep furrow; operculum calcareous, thick, slightly concave on the outer side, the whorls increasing slowly, the last, in full-grown specimens, becoming gradually attenuated, the inner with only $1\frac{1}{2}$ whorls, the last raised, almost covering the remainder, with a periostracum, and an umbilicus-like cavity.

Hab. Burma Moulmain (*Fea, Stoliczka*); Damotha (*Stoliczka*)

"In the obsolete channel, occasionally visible at the top of the aperture, this shell has possibly some relation to Gould's *M. sectulabre*. The indentation, invariably present in the internal callus of the aperture, seems to have some reference to the obliterated channel, and shows a passage to the *Pupina*. The form has a great resemblance to that of the gigantic *P. grandis*, Forbes (*forbesi*, Pfr.), which it exceeds in size. As in that shell, the great length of the penultimate whorl, above the aperture, contrasts with the shortness of the same part in the allied species *M. chrysallus*, Pfr." (*Benson*.)

The accompanying figures have been drawn from a specimen in the British Museum, measuring 34 mm in length, 18 mm in diameter

Dioryx feddenianus, *Kobelt*, *Das Tierreich*, Lief 16, 1902, p 338

Original description. — “Testa globoso, subturbinata, profunde umbilicata, glabra, in ultimo anfractu ad suturam peculiariter deplanata, deinde subangulata et infra angulum levissime convexiuscula seu planata et angustata, solida, brunnea; anfractibus $3\frac{1}{2}$, rapide crescentibus, superioribus, convexiusculis, ultimo supra et prope umbilicum angulato, tubulo suturali tenui, prope

Fig 32 — *Dioryx feddenianus* (× 2)

aperturam oriente et fere dimidium ultimi anfractus in longitudine æquante; strictura brevissima, vix conspicua; apertura circulari, carneola, supra angustissime adanata; perist duplici, interno integro, tenuissimo, externo breviter expansiusculo et reflexo.

“Diam maj .20 [5 mm.], d. min. .16 [4 mm.], alt. .16 unc. [4 mm.]”

Hab Burma: Shan States (*Fedden*); Moulmain (*Hungerford*).

The specimen figured is in the British Museum.

288. *Dioryx globulosus*, *Godwin-Austen*

Alycaeus (*Dioryx*) *globulosus*, Godwin-Austen, Land & Freshw. Moll India, 11, 1914, p. 388, pl. 157, fig. 1

Original description — "Shell globosely conical, closely perforate; sculpture a strong epidermis, with irregular transverse striæ of growth and with streaks of brown, spiral striation is indistinctly seen, on swollen portion very regular close flat costulation, colour pale umber-brown, spire low, apex blunt, suture well impressed; whorls 4, tumid, the last reflected just behind the aperture; aperture circular, peristome double, much thickened, very slightly reflected; operculum widely spiral, the sutures distant, slightly concave

"Major diam 3.25; alt. axis 4 mm"

Hab. India. Luzon, Taanspu Valley (*Oakes*)

"The operculum is of the type of *D. urnula*, smooth in front, the sutures only just discernible." (*Godwin-Austen*.)

289. *Dioryx labrirubidum*, *Godwin-Austen*

Alycaeus, n. sp., Nevill, Hand List, 1, 1878, p. 292, No. 22

Alycaeus (*Dioryx*) *labrirubidum*, Godwin-Austen, Land & Freshw. Moll India, 11, 1914, p. 430, pl. 155, fig. 1

Original description :—"Shell rimate, elongately conical, solid, sculpture extremely fine transverse striation throughout, not even coarser next the sutural tube except slightly so at its anterior end, colour pink throughout, stronger on the peristome, approaching red on the apex; spire high, sides flat, apex small, suture impressed, whorls 5, sides rounded, the last constricted close behind the aperture, distance to the sutural tube very short; aperture circular, strong, peristome solid, double, reflected

"Major diam 6; alt. axis 5.2 mm" (*Godwin-Austen*)

Hab. Burma; Khargan, Attaran Valley (*Theobald*), Phaboo (*Hungerford*).

290. *Dioryx pingoungensis*, *Godwin-Austen*

Alycaeus (*Dioryx*) *urnula* var., Godwin-Austen, Proc. Zool. Soc. 1888, p. 245, id., Land & Freshw. Moll India, 11, 1914, p. 414

Alycaeus (*Dioryx*) *pingoungensis*, Godwin-Austen, Land & Freshw. Moll India, 11, 1914, p. 414, pl. 153, fig. 13

Original description — "Shell solid, imperforate, sculpture very smooth, surface with indistinct transverse striation, next the sutural tube there is fine close costulation; colour dull white; spire high conic, apex rounded, suture well impressed, the sutural tube very long, whorls with sides very rounded, aperture circular, vertical; peristome strong and thickened, double.

"Major diam. 3.10; alt. axis 2.70 mm"

Hab. Burma. Pingoung, Shan Hills (*Spratt*).

"This species, although very similar in all main characters to the Indian forms, as I said in 1888, is certainly quite worthy of

separation Compared with typical *urnula*, Bs, from Darjiling, it is more solid and smoother, costulate sculpture on last whorl somewhat stronger, the umbilical margin more circumscribed, peristome solid, and particularly in the distance from base of the sutural tube to the peristome being very short, forming the constricted part of the whorl, when it is compared with typical *D. urnula* from Darjiling and the variety from the Naga Hills, etc., it thus approaches the constriction of *D. amphora*." (Godwin-Austen)

291. *Dioryx urceolus*, Godwin-Austen

Alycaeus (Dioryx) urceolus, Godwin-Austen, Land & Freshw Moll India, II, 1914, p 369, pl. 153 fig 9

Original description — "Shell ovately globose, elongate, no perforation, sculpture . costulation next the sutural tube very fine and close, rest of shell finely striate, colour bleached, spire high, apex small, suture impressed, the sutural tube moderately long; in the drawing made from the first specimen received . this is represented too short, the end being broken, whorls $4\frac{1}{2}$, sides rounded; constriction short behind aperture, aperture oval vertically, peristome simple, double, rather solid.

"Major diam 4.8, alt axis 4.25 mm."

Hab India Abor Hills (*Oakes*)

"This species differs considerably from typical *urnula* in being far larger and so high in the spire, *urnula* being more globose and depressed, from another Abor species of this subgenus it may be known at once by its less tumid globose shape and the peristome being far less thickened" (Godwin-Austen)

292 *Dioryx urnula*, Benson.

Alycaeus urnula, Benson, A. M. N. H. ser 2, xi, 1853, p 284, Pfeiffer, Malak. Bl 1, 1854, p 88, Adams, Gen Rec Moll II, 1855, p 278, Pfeiffer, Mon Pneum Suppl. 1, 1858, p 34, Theobald, J. A. S. B. xi, part 2, 1872, p 330, Hanley & Theobald, Conch. Ind 1874, pl 91, figs 8, 9, Theobald, Cat. Shells Brit India, 1876, p 40, Sowerby, in Reeve, Conch Icon xx, 1877, *Alycaeus*, pl 2, fig 13, Nevill, Hand List, I, 1878, p 292

Alycaeus (Dioryx) urnula, Benson, A. M. N. H. ser 3, III, 1859, p 284, Godwin-Austen, Proc Zool Soc 1888, p 245, id Land & Freshw Moll India, II, 1914, p 345, pl 153, fig 1, p 346, pl 153, fig 2 (large var.)

Dioryx urnula, Kobelt & Mollendorff, Nachr. Deuts Malak Ges xxix, 1897, p 149, id, Cat Pneum 1899, p 45, Kobelt, Das Tierreich, Lief 16, 1902, p 340

Original description — "Testa imata, vix perforata, globosiconica, laevigata, sordide albida, apice acutiusculo, rubescente, sutura impressa, callum gerente; anfractibus $3\frac{1}{2}$, convexis, ultimo venticoso, exilissime radiato-striato, pone aperturam breviter constrictiusculo, proxime tubam retroversam, suturalem, elongatam.

emittente apertura circulari verticali integra, peristomate in-crassato, subduplicato, expanso, subreflexo, breviter adnato; operculo aperturam æquante, planato, anfractibus mediocribus, subconspicuis.

"Diam. $3\frac{1}{2}$, alt. $4\frac{1}{2}$ mill."

Hab India Darjeeling (Trotter), Sikkim (Godwin-Austen), Arakan Hills (Nevill), Tonoputu, Brahmakand, Garo Hills, Naga Hills, Jaintia Hills (Godwin-Austen). Burma Bhamo (Anderson), Moulmain (Theobald)

"This interesting species inhabits the same locality as *A. constrictus*, described in the tenth volume of the 'Annals,' but differs in form and sculpture and in the position of the sutural callus. The strangulation is less conspicuous than in other species of *Alyceus*, and the constriction occurs immediately behind the peristome, hence the sutural callus also commences near the aperture instead of being remote as in the other species. A brown mark, in the single specimen which has come to hand, occurs at the point where the callus is given off. The callus lying in the suture is also longer than in the orbiculate *A. strangulatus*, in which it is moderate, or in *A. constrictus*, where it is short. The number of whorls in the operculum of *A. strangulatus* is much greater, and they are more compactly wound than in either *A. urnula* or *constrictus*, in *A. urnula* the sutures are tolerably distinct, and the central whorls are slightly concave, in *A. constrictus* the sutures are inconspicuous, as originally noted" (Benson)

Var. *globosa*, Godwin-Austen

Alyceus (Dionis) *urnula*, var. *globosus*, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p. 363, pl. 153, fig. 8

Alyceus (Dionis) *globosus*, Godwin-Austen, Rec. Ind. Mus. VIII, 1915, p. 503

Original description.—"Shell globosely and depressedly conical, scarcely perforate, sculpture extremely fine costulation next the sutural tube and still further back, the upper whorls smooth, colour pale whitish brown, spire depressed, apex blunt; suture moderately impressed, sutural tube moderately long, whorls 4, tumid, constricted close behind the peristome, distance of this last to base of sutural tube very short, aperture circular; peristome double, much thickened, sharply and shortly reflected, operculum distantly spual, central whorl conspicuous, colour dull yellow

"Major diam 4.0, alt axis 3.75 mm" (Godwin-Austen)

Hab India Brahmakund, Assam (Ogle).

Var. *anghamiensis*, Godwin-Austen.

Alyceus (Dionis) *urnula*, var. *anghamiensis*, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p. 402, pl. 153, figs 5, 6

Original description.—"Shell very globosely conoid, imper-

foiate, with strong epidermis, sculpture smooth, with distant strong striation approaching irregular distant costulation, fine close costulation as far back as end of sutural tube, colour pale sienna-brown, apex darker, spire subconic, low, apex blunt, suture impressed, the sutural tube very long, whorls 4, much rounded; aperture circular, vertical, peristome compactly double.

"Major diam 4.1, alt axis. 2.9 mm"

Hab India: Japvo Peak, Naga Hills (*Godwin-Austen*)

"Other specimens were found in the Anghami-Naga Hills. This is very distinct from typical *D urnula* in its globose, tumid shape. From the Lhota Naga Hills there are five specimens which come very close to this variety, yet are not quite the same, and one is very large, 4.5 mm in major diameter and 6 mm. in height" (*Godwin-Austen*)

Var daflaensis, *Godwin-Austen*

Alyceus (*Dioiyr*) *urnula* var, *Godwin-Austen*, J A S B xlv, part 2, 1876, p 178

Alyceus (*Dioiyr*) *urnula*, var *daflaensis*, *Godwin-Austen*, Land & Freshw Moll India, ii, 1914, p 360, pl 153, fig. 4

Original description —"Higher in the spire, aperture proportionally larger; whorls more rounded, sutural tube only one-fourth the length, and the ribbing much less fine on the swell of the whorl—differences which by some would be considered quite sufficient to warrant another name being given to this *Dafia* form. Five specimens were found all possessing the above character, so it would appear to be quite constant" (*Godwin-Austen*)

Hab. India: Nios Ridge and Toruputu Peak, Dafia Hills (*Godwin-Austen*)

Var. pisum, *Godwin-Austen*.

Alyceus (*Dioiyr*) *urnula* var, *Godwin-Austen*, J A S B lx, part 2, 1871, p 93, pl 5, figs 4, 4a

Alyceus (*Dioiyr*) *urnula*, var *pisum*, *Godwin-Austen*, Land & Freshw Moll India, ii, 1914, pp 384, 402, pl 143, fig 9, pl 153, fig 3

Original description —"Shell globose conoid, colour whitish to pale pink ochraceous, spire moderately high, apex blunt, suture well impressed, the tube moderately long, whorls 4, the last very tumid, aperture circular, peristome moderately thickened; operculum multispiral, central portion rather raised above the marginal whorls

"This variety may be known by a more globose shape and a more depressed spire than in the type species

"The specimens from Marangip Peak are most richly coloured in tints of pink and ochre" (*Godwin-Austen*)

Hab India: Marangip Peak, South Jaintia Hills, Nongjughri Trigonometrical Station, 4563 ft, Jaintia Hills (*Godwin-Austen*).

293. *Dioryx varius*, Godwin-Austen.

Alycæus (*Dioryx*) *varius*, Godwin-Austen, Land & Freshw Moll India, II, 1914, p 402, pl 157, fig 7

Original description — "Shell turbinate, narrowly perforate, sculpture transverse striae above, finely costulated next the sutural tube; colour bleached, spire rather high, apex fine; suture impressed, sutural tube long, whorls 4, rounded, slightly swollen near sutural tube, constriction near base of it and at some distance from the peristome, interval smooth and straight, aperture circular, subvertical, peristome double, solid, thickened on outer margin, not so on the columellar margin.

"Major diam 40, alt. axis 25 mm"

Hab India. Lhota Naga Hills (*Chennell*).

"This is an interesting form, but unfortunately only one specimen was found. The long sutural tube and the short distance it is behind the peristome places it in *Dioryx*, but it differs very much in the umbilical region and in general shape" (*Godwin-Austen*)

Genus *ALYCÆUS*, Gray.

Alycæus, Gray, Nomencl Moll. TYPE, *Cyclostoma gibbum*, Eydoux

Range India, Burma, Farther India, Malaysia, Southern China, Japan.

Shell narrowly umbilicated, conical or depressed-conoid, whorls convex; the last whorl distorted, compressed, much constricted before the aperture, provided with a sutural tube, aperture circular, peristome generally thickened or reflexed, operculum corneous, many-whorled

Subgenus *ALYCÆUS*, s. str.

Orthalycæus (part), Pfeiffer, Mon Pneum Suppl. 3, 1875, p 57, Kobelt & Mollendorff, Nachr Deuts Malak Ges. XXIX, 1897, p. 149, id, Cat Pneum 1899, p 45

Alycæus (subgenus), Kobelt, Das Tierreich, Lief 16, 1902, p 341.

TYPE, *Cyclostoma gibbum*, Eydoux.

Range. India, Burma, Nicobars, Farther India, Sunda Islands.

Shell conoid or turbinate, constriction more or less distant from the mouth, operculum can be retracted as far as the constriction, which is completely closed by it.

294. *Alycaeus anonymus*, *Godwin-Austen*

Alycaeus anonymus (W Blf MS.), *Godwin-Austen*, *Land & Freshw. Moll India*, ii, 1914, p 405, pl. 139, figs 1, 1 a.

Original description.—"Shell turbinate, rather openly umbilicated, sculpture fine regular costulation throughout, gradually getting coarser near the sutural tube, finer and continued up to the peristome; colour very pale ochraceous, spire conoid, fairly high, sides flat; suture impressed, whorls 4, well rounded, slightly swelling for the length of the sutural tube, which is moderately long, aperture nearly circular, oblique, peristome double and much thickened, slightly reflected

"Major diam. 6.7; alt. axis 3.5 mm" (*Godwin-Austen*)

Hab Burma Akowtong, Thoudaung, and Yenandoung, Pegu.

295. *Alycaeus barowliensis*, *Godwin-Austen*.

Alycaeus barowliensis, *Godwin-Austen*, *Land & Freshw Moll. India*, ii, 1914, p 352, pl 141, fig 4

Original description.—"Shell conoid, compact, narrowly umbilicated; sculpture distant costulation on the upper whorls, very fine and close next the sutural tube, smooth anterior to it up to the peristome, colour bleached; spire high, conical, apex blunt; suture moderately impressed; sutural tube long; whorls 4, constriction slight, distant from aperture, a slight swelling between the two, aperture oval, rounded below, subangulate on the lower margin, rounded on the columellar side, peristome double and much thickened.

"Major diam. 3, alt. axis 2 mm" (*Godwin-Austen*)

Hab. India. Barowli River, Akha Hills, Durrang, Assam (*Godwin-Austen*).

296. *Alycaeus beddomei*, *Godwin-Austen*.

Alycaeus beddomei, *Godwin-Austen*, *Land & Freshw Moll. India*, ii, 1914, p 386, pl. 149, figs 5, 5 a

Original description—"Shell very globosely conoid, rather closely umbilicated, sculpture regular, close costulation next the long sutural tube, indistinct and distant on the upper whorls, very fine, close longitudinal liration is very marked, colour pale unbec, spire rather high, conic, apex blunt; suture very well impressed, whorls 4, very convex, constriction slight close to the sutural tube, thence to aperture short, aperture ovate, subvertical, peristome double, solid on the outer margin, much reduced in thickness on the inner in four of the shells in which the peristome was not so mature, angulation was noted on the

outer margin by two faint indentations operculum, rather solid, horny, concentric

"Major diam 4.5; alt axis 2.5 mm" (*Godwin-Austen*)

Hab. India Naga Hills (? *Muspratt*)

297 *Alycæus blanfordi*, *Godwin-Austen*.

Alycæus blanfordi (non nud.), Theobald, Cat. Shells Brit. India, 1876, p. 39

Alycæus (*Orthalycæus*) *blanfordi*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges. xxix, 1897, p. 149, id., Cat. Pneum. 1899, p. 45

Alycæus blanfordi, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 418, pl. 148, fig. 3

Original description.—"Shell very globosely conoid, openly umbilicated, sculpture fine, distant, raised costulation on the upper whorls, becoming close and strong contiguous to the sutural tube, colour ruddy ochraceous, spire conoid, suture impressed, the tube long and thin, whorls 4, well rounded, constriction short, well marked in front of the tube, then expanding between that and the aperture; aperture oval, subangulate at upper inner margin, an elongate tooth on the upper margin of the peristome, which is slightly reflected, with an indication of crenation on the lower, the peristome double and much thickened, operculum black

"Major diam. 3.2; alt. axis 1.25 mm" (*Godwin-Austen*.)

Hab. Burma Chwegañ, Añakan Hills.

298. *Alycæus burti*, *Godwin-Austen*.

Alycæus burti, Godwin-Austen, J. A. S. B. xliii, part 2, 1874, p. 149, pl. 3, fig. 9, id., op. cit. xlv, part 2, 1876, p. 176 (var.), Sowerby, in Reeve, Conch. Icon. xx, 1877, *Alycæus*, pl. 3, fig. 27; Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 362, pl. 144, figs. 8, 8a

Alycæus burti, Theobald, Cat. Shells Brit. India, 1876, p. 39, Nevill, Hand List, i, 1878, p. 291

Alycæus (*Alycæus*) *burti*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 342

Original description.—"Shell turinate, openly umbilicated, thick, pale ochreous; shallow but well-marked ribbing on swell of last whorl and finely costulated on the apex. Spire conoid, apex sharp, suture well impressed. Whorls 5, the last moderately swollen, constriction very slight, short, and smooth up to the peristome, sutural tube moderate, rather large at base. Aperture oblique, laterally oval, angular on inner upper margin, with 4 well-marked notches on the outer margin, peristome thickened, double, well reflected, inner lip continuous.

"Major diam 0.22" [5.5 mm.], minor diam 0.19" [4.75 mm.], alt 0.15" [3.75 mm.]" (*Godwin-Austen*.)

Hab. India foot of the Bhutan Himalayas, Akha Hills, at the debouchement of the Barowli River, in Durrang, Assam (*Burt*); Dihiri Parbat, Burro Gorge (*Godwin-Austen*).

"A variety of it, differing slightly, which is much larger and more depressed in form, but which in the crenate peristome and in form of constriction is the same, occurred in the valley of the Dikrang and in the Yetai Ravine. This variety measures in alt. 0.18 [4.5 mm], major diam. 0.25 in [6.25 mm]" (*Godwin-Austen*, l c 1876.)

Var yetaiensis, Godwin-Austen

Alyceus hirtu, var *yetaiensis*, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p 353, pl 149, fig 7

Original description.—"Shell depressedly and globosely conoid, very openly umbilicated, sculpture costulation fine, somewhat irregular and distant as it approaches the termination of the sutural tube, it is then close and strong. Behind the aperture it is quite smooth. Distinct longitudinal striæ are to be seen on the upper whorls; colour dull pale ochraceous, spire low, apex small, papillate, suture much impressed, whorls $4\frac{1}{2}$, the last swollen, smooth portion behind aperture short with no ridges, aperture circular, slightly angulate above near suture; peristome crenulated on the outer margin, four depressions with strongly defined intermediate processes, straight above, well rounded on the columellar side; operculum multispiral, very concave, and outer margin turned inwards

"Major diam. 0.75 [7.5], alt. axis 0.3 [3]. Size of largest major diam 0.9 [9], alt. axis 3.5 mm" (*Godwin-Austen*)

Hab. India. Yetay Ravine, No. 24 Peak, Dafia Hills (*Godwin-Austen*).

299 *Alyceus chanjukensis*, Godwin-Austen.

Alyceus chanjukensis, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p 364, pl 157, figs. 5, 5 a.

Original description.—"Shell globosely conoid, closely umbilicated, sculpture fine, rather close costulation on the apical whorls, strong and close-set next the sutural tube, becoming gradually finer posteriorly, colour bleached, spire high, conical, apex fine, suture impressed, sutural tube very long, whorls $4\frac{1}{2}$, well rounded on the sides, the constriction is short, aperture ovately circular, subvertical, peristome double, deeply and sharply crenulated, 4 deep channels running backwards separated by V-shaped barriers, and much thickened as viewed from the side, columellar margin well curved

"Major diam 4.58, alt. axis 2.7 mm"

Hab. India. Chanjuk La, Tsanspu Valley, 4300 ft, Lat $29^{\circ} 25'$, Long $95^{\circ} 20'$ (*Oakes*).

"This may be compared with *A. vesica* from the same great valley, but its spire differs and the crenulation is sharper and finer. It may also be compared with *A. lohutensis* from Brahmakund, but the difference is quite specific." (*Godwin-Austen*.)

300 *Alycæus conicus*, Godwin-Austen.

Alycæus conicus, Godwin-Austen, J. A. S. B. xl, part 2, 1871, p. 87, pl. 3, figs 1, 1a, 1b, Hauley & Theobald, Conch. Ind. 1875, pl. 103, figs 8, 9, Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 386, Theobald, Cat. Shells Brit. India, 1876, p. 39, Sowerby, in Reeve, Conch. Icon. xx, 1877, *Alycæus*, pl. 1, fig. 9; Nevill, Hand List, i, 1878, p. 290, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 387, pl. 143, figs 4, 4a, 4b.

Alycæus (*Orthalycæus*) *conicus*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges. xxix, 1897, p. 149, id., Cat. Pneum. 1899, p. 45.

Alycæus (*Alycæus*) *conicus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 342.

Original description — "Shell narrowly umbilicated, turbinate, thick, translucent pale corneous, pink or white, quite smooth, with shining lustre in fresh shells, with very strong regular filiform costulation on the tumid portion of the last whorl, the sculpture terminating abruptly both in front and behind with the exception of some raised striæ close behind the termination of the sutural tube, indistinct ribbing near the umbilicus. Spire conoid, apex obtuse; suture impressed, whorls 4-4½, rounded, last very slightly swollen, constricted and enlarging slightly again near the aperture. Constriction smooth, rather short, sutural tube moderate, commencing at 0.045 inch [1.25 mm.] distance from the mouth. Aperture slightly oblique, a perfect circle; peristome double, thick, inner continuous, projecting, slightly expanded, the outer retroflect. Operculum horny, multispiral, concave in front; smooth behind, no central boss.

"Major diam. 0.12" [3 mm.] to 0.13" [3.25 mm.], minor diam. 0.11" [2.75 mm.]; alt. 0.10" [2.5 mm.] to 0.11" [2.75 mm.], diam. of aperture 0.06" [0.15 mm.], sutural tube 0.045" [0.11 mm.]."

Hab. India. Limestone Hill and Samiamri, east of the Kopili River, North Cachar.

"This shell is very close to *Alycæus vestitus*, W. Blanford, but differs in its smaller size, the upper whorls being quite smooth, and in the ribbing near the sutural tube being more strongly and coarsely marked and in ending abruptly with it." (*Godwin-Austen*)

Var. nana, Godwin-Austen.

Alycæus conicus, var. *nana*, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 388, pl. 138, figs 6, 6a, 6b, 7.

"It differs first in the much smaller size, next in the height of spire, it is altogether smoother, no sign of any distant costulation on the first whorl, which true *conicus* shows in some specimens." (*Godwin-Austen*)

Major diam. 2.6, alt. axis 1.5 mm.

Hab. India. Jatinga Valley, Jhimi Valley, Hengdan Peak, and Phulong, North Cachar (*Godwin-Austen*).

301 *Alycæus dikrangensis*, *Godwin-Austen*.

Alycæus dikrangensis, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p. 355, pl. 148, figs 6, 6 A

Original description —“Shell somewhat depressedly turbinate, openly umbilicated, the costulation next the sutural tube is very fine and close, sculpture becoming coarser but still close towards the apex, colour stony white; spire pyramidal, apex small, suture impressed, tube long, whorls $4\frac{1}{2}$, regularly increasing, constriction between peristome and sutural tube short; aperture irregularly circular, nearly vertical, peristome double, inner crenulated, five deep notches, the outer continuous, sharply turned back.

“Major diam. 6, alt. axis 3.3 mm.”

Hab India, Toruputu Peak, Duffa Hills (*Godwin-Austen*).

“This species might easily be mistaken for *A. lohutensis*, the peristome being very similar, particularly when viewed from the side, but the costulation is very different, as also the crenulation on the side of the aperture. It is also close to *A. crenulatus* of the Dargiling Hills” (*Godwin-Austen*)

302. *Alycæus kamakiaensis*, *Godwin-Austen*.

Alycæus kamakiaensis, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p. 375, pl. 141, fig. 8

Original description.—“Shell turbinate, moderately umbilicated, sculpture fine well-marked, close costulation extending a little beyond the length of suture, gradually becoming finer and much more distant on nearing the apex, colour a brown epidermis, coming off, spire slightly depressedly conic, apex small, suture impressed, the sutural tube moderately long, whorls 4, aperture oval, angular above, the obscure crenulation on outer margin making it polygonal in outline, sub-oblique; peristome double, not very thickened, columellar margin vertically curved.

“Major diam. 2.5; alt. axis 1.2 mm.” (*Godwin-Austen*.)

Hab India, Kamakia Temple Hill, near Gowhatti, Assam (*Godwin-Austen*).

303 *Alycæus levis*, *Godwin-Austen*.

Alycæus levis, Godwin-Austen, Land & Freshw. Moll. India, II, 1914, p. 394, pl. 138, figs 3, 3 A

Original description.—“Shell depressedly globose, umbilicus open, sculpture shell a good deal worn, but very fine close costulation next the sutural tube, colour bleached, spire conical, depressed, apex rounded, suture moderately impressed, sutural tube long, whorls $4\frac{1}{2}$, slight constriction in front of tube and then slightly

swelling again; aperture circular; peristome double, simple, much thickened, columellar margin rounded, operculum black.

"Major diam 6, alt axis 2.7 mm"

Hab Burma Mumpur

"It is in form exceedingly like a very large *Alycæus* from Burma, *A. magnus*, but about half as small." (*Godwin-Austen*.)

304 *Alycæus logtakensis*, *Godwin-Austen*

Alycæus logtakensis, Godwin-Austen, Land & Freshw Moll India, ii, 1914, p 394, pl 155, fig 6.

Original description — "Shell closely umbilicated, globosely pyramidal, sculpture distant, strong costulation on the upper whorls, close, well raised and stronger at the sutural tube, and finely so anterior to it; colour whitish, spire high conical, apex rather pointed, suture moderately impressed, the sutural tube fairly long, whorls 4, the last moderately swollen and slightly constricted in front of the sutural tube, aperture oval, strongly angulate above near suture, rounded on outer margin; peristome double, very thick as viewed from the side, well reflected, the outer somewhat protruded and angulate on the lower margin.

"Major diam 3.4, alt axis 1.6 mm" (*Godwin-Austen*)

Hab. Burma Logtak Lake, Mumpur

305. *Alycæus lohitisensis*, *Godwin-Austen*

Alycæus lohitisensis, Godwin-Austen, Land & Freshw Moll India, ii, 1914, p 362, pl 137, figs 1, 1A

Original description — "Shell turbinate, umbilicus open, sculpture fine, rather close costulation, close, coarser and well defined near the sutural tube, which is long; colour stony white, spire rather high, apex fine; suture slightly impressed, whorls $4\frac{1}{2}$, the three apical small, aperture circular, slightly angulate on upper margin, with four distinct crenulations below, peristome double, thickened, not expanded, crenulation only slightly shown on outside, the inner sharply folded back; columellar margin rounded; operculum smooth, black.

"Major diam 4.5, alt. axis 3.5 mm."

Hab India. Brahmakund, Lohit Valley, Eastern Assam (*Ogle*)

"This may be compared with the Dufia Hills species *A. burin* and *A. rugosus*, but the form of the aperture differs considerably" (*Godwin-Austen*.)

306 *Alycæus magnus*, *Godwin-Austen*.

Alycæus magnus, Godwin-Austen, Proc Zool Soc 1893, p 594; id., Land & Freshw. Moll India, ii, 1914, p 395, pl 138, figs 1, 1A

Alycæus (*Orthalycæus*) *magnus*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges. xxix, 1897, p 160, id., Cat Pnæum 1899, p 46.

Alycæus (*Alycæus*) *magnus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 346

Original description:—"Shell globosely turbinate, rather closely umbilicated, thick, sculpture fine regular costulation next the sutural tube, becoming finer and more irregular on the apical whorls; colour, specimen bleached, spire conoid, rounded, apex blunt; suture moderately impressed, the sutural tube long and well developed, whorls 5, the last much swollen, the constriction near the base of the sutural tube slightly swelling towards the aperture, aperture oblique, circular, with a slight angulation above; peristome double, continuous, strong, slightly expanded and reflected, the inner with a flange on the umbilical margin.

Fig 33.—*Alycæus magnus* ($\times 2$)

"Major diam. 11, min. diam 8.8, alt. axis 5.25 mm."

Hab India Naga Hills (*Muspratt*).

"It is a giant, yet modified, form of *A. nagaensis*, from Asalu, but it is more closely umbilicated and the costulation, for its greater size, is much finer, it is also more globose, and more rounded at the apex" (*Godwin-Austen*)

The specimen figured is in the British Museum, received from Col Beddome, and is evidently a co-type.

307. *Alycæus margarita*, *Theobald*.

Alycæus margarita, Hanley & Theobald, *Conch. Ind.* 1874, p. 39, pl. 96, fig. 10 (not pl. 97, fig. 7), Theobald, *Oat Shells Brit. India*, 1876, p. 40, Nevill, *Hand List*, i, 1878, p. 293

Alycæus (*Orthalycæus*) *margarita*, Kobelt & Mollendorff, *Nachr. Deuts. Malak. Ges.* xxii, 1897, p. 150, id., *Oat. Pneum.* 1899, p. 417

Alycæus (*Alycæus*) *margarita*, Kobelt, *Das Tierreich*, Lief. 16, 1902, p. 347.

Alycæus (*Cyclorhynchus*) *margarita*, Godwin-Austen, *Land & Freshw. Moll. India*, ii, 1914, p. 416

Theobald states that the shell is related to *A. graphicus*, but that it differs in form, sculpture, and colouring. Godwin-Austen refers the shell figured on plate 97, fig. 7, of *Conch. Ind.* to

A. sculptilis. No description of *A. margarita* has been given, but judging from figure 10 on pl 95 of Conch Ind, it appears to be conoid, narrowly umbilicated, composed of $4\frac{1}{2}$ or 5 whorls, the earlier reddish, the last bluish white, strongly and distantly ribbed, aperture subcircular, scarcely oblique, with double peristome, the inner continuous, projecting, the outer expanded; major diam. 3.25 mm.

Hab. Burma Shan States (*Fedden*).

308 *Alycæus mundulus*, *Godwin-Austen*.

Alycæus mundulus, Godwin-Austen, Land & Freshw Moll India, II, 1914, p 357, pl 149, fig 8

Original description — "Shell globosely conoid, umbilicated; sculpture rather strong, regular costulation on the upper whorls, conspicuous, as next the suture it is peculiarly fine and regular; colour white; spire high, about half the diameter, apex fine; suture impressed, the sutural tube moderately long; whorls 4, well rounded, constriction slight and scarcely any swelling, aperture oblique, ovate, the upper outer margin protruded forwards, behind the aperture, peristome simple, double, rounded below, angulate near suture, nearly vertical on the columellar side

"Major diam 4.5, alt axis 2.25 mm"

Hab. India Toruputu, Daffa Hills (*Godwin-Austen*).

"In form it is curiously like *A. commutatus*, an allied subspecies, as well as in the type of sculpture and the operculum, but the aperture is quite distinct" (*Godwin-Austen*)

309 *Alycæus nattoungensis*, *Godwin-Austen*.

Alycæus pusillus, Theobald, J A S B xli, 1872, p 330

Alycæus pusillus var (? distinct species), Nevill, Hand List I, 1878, p 291

Alycæus nattoungensis, Godwin-Austen, Land & Freshw Moll India, II, 1914, p. 410, pl 155, figs. 15, 15 a.

Original description — "Shell conoid, base rather flat; sculpture strong well-defined costulation next the sutural tube, succeeded by fine distant and irregular, colour whitish, apex pinkish; spire fairly high, suture impressed, the sutural tube long, whorls $3\frac{1}{2}$, rounded, the last scarcely constricted close to the sutural tube, thence very flat to the aperture, aperture oval, subvertical, peristome is reflected, not double, but it is not quite fully developed.

"Major diam. 2.5, alt axis 1.1 mm."

Hab. Burma Nattoung Hills, Pegu (*Theobald*)

'This species in its small size and general form is like *A. pusillus*, G-A., of the Jaintia Hills, but a close examination shows marked departure, seen particularly well, when viewed from

above, in the very short sutural tube of *A pusillus*—the very short costulated portion of the whorl and its smooth glossy surface, and generally flatter apex." (*Godwin-Austen*.)

310. *Alycæus nowgongensis*, *Godwin-Austen*

Alycæus nowgongensis, Godwin-Austen, Land & Freshw Moll. India, II, 1914, p. 397, pl. 137, figs. 4, 4 a, 4 b

Original description — "Shell rather openly umbilicated, depressedly turbinate, sculpture fine regular costulation, terminates short of the length of the sutural tube, succeeded by well-marked distant ribs; colour white, bleached; spire conic, somewhat depressed. suture well impressed, sutural tube moderately long, whorls 4, well rounded, the last constricted close to base of sutural tube, then slightly swollen diagonally forward to the peristome, aperture circular, simple, slightly angulate at upper outer angle; peristome double, the outer reflected and spreading outwards

"Major diam. 3, alt. axis 1.4 mm"

Hab India. Kohaghur, Nowgong District, Assam (*Godwin-Austen*)

"In the form of the inflation in front of the constriction this species recalls *A. diagonus*, but its shape is quite different and it is much more openly umbilicated. I found this single specimen on the low granite hill of Kohaghur in the ruins of an old temple. The Brahmaputra washes the base of the hill, a terminal spur from the Lhota Naga Hills on the south" (*Godwin-Austen*)

311 *Alycæus oglei*, *Godwin-Austen*

Alycæus oglei, Godwin-Austen, Land & Freshw Moll India, II, 1914, p. 362, pl. 148, fig. 2

Original description :—"Shell globosely conoid, umbilicated, sculpture close regular costulation on the swollen part of the last whorl, at termination of the suture becoming more distant; colour bleached, spire high, turbinate, apex small, suture very impressed, the sutural tube very long, whorls 4, with very rounded sides, very slightly constricted at the sutural tube and expanded slightly to the aperture, this portion short and smooth; the aperture subvertical, horizontally oval, slightly angulate on upper inner margin, peristome double, thickened, crenulated, with four indentations, the first high on outer margin. The operculum (Dihing specimen) is remarkable, being multispiral and deeply concave in front

"Major diam. 5.5, alt. axis 2.9 mm." (*Godwin-Austen*.)

Hab India. Sadia and Dihing, Assam (*Ogle*)

312 *Alycæus panggianus*, *Godwin-Austen*

Alycæus panggianus, Godwin-Austen, Land & Freshw Moll India, II, 1914, p. 367, pl. 156, figs. 3, 3 a

Original description — "Shell openly umbilicated, globosely conical, sculpture fine; close costulation next the sutural tube,

succeeded by much stronger and more distant, towards the apex becoming very fine; colour whitish, spire moderately high, apex small, suture moderately impressed, whorls 4, well rounded, the last smooth and straight from sutural tube to the aperture; aperture circular, peristome well rounded on the inner margin, well crenulated on the outer in 5 folds; operculum multispiral, sutures distant, intermediate space diagonally striate, with well-marked lines of growth

"Major diam 4, alt axis 1.6 mm"

Hab. India Sibbum, Abor Hills (*Oakes*)

"I name this species after the Abor Clan Panggi, of which the principal stockaded village is Sibbum.

"The sutural tube is bent on itself in this particular specimen, and must be abnormal, for although I have now handled hundreds of shells of this genus, I have never seen one like it before." (*Godwin-Austen*.)

313. *Alycæus perplexus*, *Godwin-Austen*.

Alycæus perplexus, Godwin-Austen, Land & Freshw. Moll India, 11, 1914, p. 380, pl. 155, fig. 11

Original description :—"Shell globosely conical, openly perforated, sculpture smooth to eye, but it is extremely fine close costulation, close and fairly strong on swollen portion near the sutural tube, which is long and very fine, colour strong ochraceous brown, spire high conic, suture well impressed; whorls 4, well rounded, the constriction slight in front of the sutural tube, then swelling slightly towards the aperture, this is oval, subangulate above, subvertical on columellar side; peristome double slightly reflected, much broader on outer margin than on the inner, operculum closely multispiral, pale in colour, with a rather deep central depression.

"Major diam. 3.75 mm"

Hab. India Khasi Hills.

"This species is not far removed from *A. theobaldi*; it is smaller and more conical, the aperture differs considerably as well as the sculpture." (*Godwin-Austen*)

314 *Alycæus politus*, *Blanford*

Alycæus politus, Blanford, J. A. S. B. xxxiv, 1865, p. 83, Hanley & Theobald, Conch. Ind. 1874, pl. 94, figs. 1-3, Pfeiffer, Mon. Pnem. Suppl. 3, 1875, p. 60, Theobald, Cat. Shell. Brit. India, 1876, p. 40, Sowerby, in Reeve, Conch. Icon. xx, 1877, *Alycæus*, pl. 5, p. 39, Nevill, Hand. List, 1, 1878, p. 292, Godwin-Austen, Land & Freshw. Moll. India, 11, 1914, p. 422, pl. 139, figs. 5, 5 a

Alycæus (*Orthalycæus*) *politus*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges. xxix, 1897, p. 150, id., Cat. Pnem. 1899, p. 46

Alycæus (*Alycæus*) *politus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 348

Original description :—"Shell moderately umbilicated, turbinate-depressed, smooth, polished, shining, amber-coloured.

Spire depressly conoidal, suture deep, apex obtuse, rather redder than the remainder of the shell. Whorls $3\frac{1}{2}$, convex, the last round, scarcely descending towards the mouth, very little swollen at the side, and ornamented on the inflated portion for a short distance with close fine costulation, which extends beneath to the umbilicus and renders the shell opaque in that spot. Constriction long, smooth, swelling considerably in front towards the mouth, sutural tube short, about $\frac{1}{2}$ to $\frac{1}{3}$ of the periphery of the penultimate whorl. Aperture oblique, circular, deeply sinuate at the junction with the penultimate whorl, and at the lower right margin, peristome double, the inner lip projecting and continuous, outer lip retroflect. Operculum horny, multispiral, externally concave.

"Major diameter 3, minor ditto $2\frac{1}{2}$, axis $1\frac{1}{4}$ mm."

Hab Burma Phoung do, near Cape Negrais, Arakan

"Very near *A. humilis*, W. Blanford, from Pegu, but distinguished by its lower spire, wider umbilicus, more sinuous mouth, and especially by its high polish, in which it is only equalled by *A. nitidus*, W. Blanford." (*Blanford*.)

315. *Alycæus pusillus*, *Godwin-Austen*.

Alycæus pusillus, Godwin-Austen, J. A. S. B. xl, part 2, 1871, p. 89, pl. 3, figs 3, 3 a, 3 b, Hanley & Theobald, *Conch. Ind.* 1875, pl. 103, figs 7, 10, Pfeiffer, *Mon. Pneum. Suppl.* 3, 1876, p. 388; Theobald, *Cat. Shells Brit. India*, 1876, p. 40, Sowerby, in Reeve, *Conch. Icon* xx, 1877, *Alycæus*, pl. 1, fig. 7, Nevill, *Hand List*, i, 1878, p. 290, Godwin-Austen, *Land & Freshw. Moll. India*, ii, 1914, p. 379, pl. 143, figs 6, 6 a, 6 b

Alycæus (*Orthalycæus*) *pusillus*, Kobelt & Mollendorff, *Nachr. Dents. Malak. Ges.* xxix, 1897, p. 150, id., *Cat. Pneum.* 1899, p. 46

Alycæus (*Alycæus*) *pusillus*, Kobelt, *Das Tierreich*, Lief. 16, 1902, p. 348

Original description — "Shell depressedly turbinate, moderately umbilicated, thin, translucent, vitreous, pale horny, smooth, rarely showing any signs of costulation, the sculpture when present is very fine and distant, closely and regularly ribbed on the expansion of the last whorl, also within the umbilicus. Spire depressedly conoid, apex blunt, suture moderately impressed, whorls $3\frac{1}{2}$, the last scarcely swollen. Constriction very slight, smooth, sutural tube very short and thick; aperture oblique, round, peristome double, inner continuous, both lips expanded. Operculum thin, horny, transparent, multispiral, slightly concave and without central boss at back

"Major diam. 0.09 [2.25 mm], minor 0.075 [1.875 mm]; alt. 0.055" [1.375 mm.], diam. of aperture 0.035 [0.875 mm.], sutural tube 0.012 [0.3 mm.]"

Hab. India Java, Jaintia Hills, Kopili (*Godwin-Austen*)

"This species is very similar to *A. humilis*, described by Mr. W. T. Blanford from Akouktong, Burma, but this last

is a larger, thicker shell, and the outer lip is reflected near the umbilicus which is not so open, as in the new shell above described" (*Godwin-Austen*)

316 *Alycæus pyramidalis*, *Benson*,

- Alycæus pyramidalis*, Benson, A. M. N. H. ser 2, xvii, 1856, p. 225; Theobald, J. A. S. B. xxvi, 1857, p. 247, Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 33, id., Novit. Alycaeus (Alycaeus) serratus, Kobelt, Das Tierreich, Lief 16, 1902, p. 351

Original description —“Shell very closely umbilicated, turbinate, rather thin, pale corneous or dark brown, finely costulated on tumid portion of the last whorl, rest of shell smooth, with shining surface; suture moderately impressed. Spire conoid, apex pointed. Whorls 4, rounded, the last very slightly tumid, constricted and enlarged into a low, recurved ridge. Sutural tube moderate. Aperture subvertical, circular, very finely notched on lower and outer margin, peristome double, thick, the outer reflected on the inner margin. Operculum thin, pale horny, flat in front.

“Major diam 0.10” [2.5 mm], minor diam. 0.09” [2.25 mm], alt 0.09” [2.25 mm]”

Hab Burma: Lusen Trigl Station, Mumpur Hills

“In the thickened rounded form of the peristome this species assimilates to *A. conicus*, but the minute notches on the inner margin are peculiar and unlike what is seen in any form I am acquainted with. It seems intermediate between the above [*A. stoliczkae*] and *A. dragomus*.” (*Godwin-Austen*.)

322. *Alycaeus sibbumensis*, *Godwin-Austen*.

Alycaeus sibbumensis, Godwin Austen, Land & Freshw Moll India, ii, 1914, p 367, pl 156, figs 4, 4a

Original description —“Shell globosely conoid, solid, well umbilicated, sculpture very fine, close transverse costulation near apex, becoming more distant on the 3rd whorl, extremely fine and close next the long sutural tube, there is an indication of distant longitudinal lination also at this part, a few distant indistinct liræ cross the smooth portion in front of the constriction; colour whitish stone, spire fairly high, suture well impressed, whorls 4, sides well rounded, the last very tumid; aperture nearly circular, subvertical on the columellar side, peristome double, very much thickened on the outer margin, less so on the inner.

“Major diam. 6.7, alt. axis 3 mm”

Hab India: Sibbum, Abor Hills (*Oakes*)

“The sculpture, particularly that of the swollen portion of the last whorl, near the sutural tube, is characteristic of several species of *Alycae* of the Abor Hills” (*Godwin-Austen*)

323. *Alycæus sylheticus*, Godwin-Austen.

Alycæus sylheticus, Godwin-Austen, Land & Freshw Moll India, II, 1914, p. 382, pl. 154, figs. 4, 4a

Original description.—"Shell globosely conoid, openly umbilicated; sculpture strong costulation and rather distant at the base of the sutural tube, becoming closer posteriorly on the upper whorls the costulation is distant, colour dull white, with a pink apex, spire rather depressedly conoid, apex blunt; suture moderately impressed; whorls 4, the last swelling next the sutural tube, which is fairly elongate—constriction short, then swelling slightly forwards, aperture horizontally ovate, angular at the upper inner margin, rounded below; peristome double, the outer reflected and expanded to an extreme extent on the columellar side.

"Major diam. 2.6; alt. 1.7 mm" (*Godwin-Austen*.)

Hab. India: South Sylhet Hills (*Chennell*).

324. *Alycæus vesica*, Godwin-Austen

Alycæus vesica, Godwin-Austen, Land & Freshw Moll India, II, 1914, p. 368, pl. 149, fig. 10.

Original description.—"Shell very globosely conoid, with a strong epidermis; sculpture strong close costulation from the long sutural tube backwards on the swollen portion of the whorl, becoming very fine on the whorls above, colour pale ochraceous brown; spire rather high, apex small and fine, suture impressed; whorls $4\frac{1}{2}$, closely-wound, constriction short, smooth, then swelling much round to the left front of the shell, aperture oval, angulate on upper margin, subvertical, peristome strongly crenulated, with four deep channels, double, thick, vertical, and sinuate on the columellar margin.

"Major diam. 6.75; alt. axis 4 mm" (*Godwin-Austen*.)

Hab. India. Bapu Peak, Abor Hills

325 *Alycæus vestitus*, Blanford

Alycæus vestitus, Blanford, J. A. S. B. xxvi, 1864, p. 138, id., op. cit. xlix, 1865, p. 99, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 54, Hanley & Theobald, Conch. Ind. 1875, pl. 103, fig. 4; Theobald, Cat. Shells Brit. India, 1876, p. 40, Sowerby, in Reeve, Conch. Icon. xv, 1877, *Alycæus*, pl. 1, fig. 3, Godwin-Austen, Land & Freshw Moll India, II, 1914, p. 424, pl. 139, figs. 2, 2a.

Alycæus (*Orthalycæus*) *vestitus*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 151, id., Cat. Pneum. 1899, p. 47.

Alycæus (*Alycæus*) *vestitus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 352.

Original description.—"Testa subanguste umbilicata, turbinata, solida, epidermide decidua, crassa, subtestacea, sorbide albida, conferte, ad spatium inflatum confertissime costulata, induta, sub epidermide rubella, lævis, spatio inflato costulato-striata. Spira conoidea, apice obtusa, sutura impressa. Anfr. $4\frac{1}{2}$ rotundati, ultimus teres, ad latus parum inflatus. Stricture brevis, versus

aperturam vix tumidior Tubulum suturale mediocre Apertura fere verticalis, circularis, majuscula: peristoma duplex; interno continuo, externo expansulo ab interno sulco separato, ad anfr. penultimum breviter interrupto.

"Diam maj 5, min $3\frac{1}{2}$, alt vix 3, apert diam. $1\frac{1}{2}$ min. Var minor. Diam maj. 4, min 3, alt. $2\frac{1}{4}$ mm "

Hab Burma Arakan Hills, banks of Pado Khyoung, Henzada District, Moditoung

"This species is not affined to any known form It is perhaps nearer to the little group to which *A. graphicus* belongs than to any other, but it has not the short sutural tube nor the ovately conoid form which characterizes that section of the genus The shortness of the constriction, and the very slight degree in which it expands towards the aperture, connect this form somewhat with the section *Dioryx* of Mr Benson " (*Blanford*)

Var *akyabensis*, *Godwin-Austen*.

Alycaeus vestitus, var. *akyabensis*, Godwin-Austen, Land & Freshw Moll India, 11, 1914, p 425, pl 155, fig 7

Original description.—"Shell moderately umbilicated, globosely conical, solid; sculpture apical whorls smooth, then succeeds fine close costulation, stronger next suture, adjacent to the long and fully-developed sutural tube, the costulation is fine and very close together, colour pale ochraceous, spire moderately high, apex rather blunt, suture impressed, whorls $4\frac{1}{2}$, very rounded, the constriction moderate, the distance from tube to the aperture short and smooth; aperture circular, subangulate above, subvertical, peristome double, continuous, curved on the inner margin, the outer slightly reflected

"Major diam. 4.25, alt axis 2.4 mm."

Hab. Burma Bamu, Akyab (*Theobald*).

"A much more globose shell than true *vestitus*. Side of spire slightly concave." (*Godwin-Austen*)

326. *Alycaeus vulcani*, *Blanford*

Alycaeus (*Orthalycæus*) *vulcani*, Kobelt & Mollendorff, Nachr Dents Malak Ges xxiv, 1897, p 151, id, Cat Pneum 1899, p 47

Alycaeus (*Alycaeus*) *vulcani*, Kobelt, Das Tierreich, Lief 16, 1902, p 852.

Original description —"Shell moderately umbilicated, depressedly turbinate, thin, translucent, varying in colour from

amber to nearly white, rather closely costulated throughout, more strongly upon the inflated portion of the last whorl, and very closely ribbed within the umbilicus. Spire conoid, apex blunt, deep rufous, suture impressed. Whorls 4, rounded, the last moderately swollen at the side, then constricted, and swelling again slightly towards the mouth. Constriction smooth, sutural tube of moderate length, about 2 mm. Aperture oblique, round, peristome crenulately waved on the outer edge, the lowest crenulation forming a rudimentary channel at the base, peristome double, the inner alone continuous, both lips somewhat expanded. Operculum thin, horny, distinctly multispiral, very concave externally, internally convex and with a prominent central nucleus.

"Major diam $4\frac{1}{2}$, minor ditto $3\frac{1}{2}$, alt 3, diam ap $1\frac{1}{4}$ mm."

Hab. Burma. Pappa Peak, Ava, Upper Burma.

"It is a more globose form than either *A. succineus*, mihi, or *A. polygonoma*, mihi, to which it is allied. The crenulation of the mouth is perhaps more marked than in any other Burmese species." (*Blanford.*)

"... the costulation at the base of the sutural tube is particularly strong, and at first distant, and I would call attention to the well-marked distant fine costulation on the smooth part of the whorl anterior to this, the four costæ behind the peristome are very noticeable. The same species has been collected at Ava, in all the examples I have looked at, the peristome is less crenulated and in two or three is hardly noticeable. The ribbing behind the peristome is quite as strongly developed." (*Godwin-Austen*)

327. *Alycæus yamneyensis*, *Godwin-Austen*.

Alycæus yamneyensis, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p. 368, pl. 156, fig. 2.

Alycæus yamneyensis, Godwin-Austen, op. cit. p. 441, id., Rec. Ind. Mus. VII, 1915, p. 503.

Original description —"Shell umbilicated, very globosely conoid, sculpture above fine, distinct horizontal striæ superimposed by fine regular and distant costulation—fine regular costulation on the swollen part next the sutural tube; spire high, apex small, acute; suture impressed, the sutural tube very long, whorls 5, the last very rounded and swollen; the constriction is sharp, the distance to the aperture short, smooth, and nearly flat, aperture irregularly oval, curving above, nearly vertical on the columellar side, peristome thickened, double and strongly crenulate on the outer margin, with three conspicuous ridges, above these the inner lip is much thickened, the outer lip has a marked expansion on the inner lower margin.

"Major diam. 7.25; alt. axis 4 mm. (type)

" " " 7.75 mm. (largest)."

Hab. India. Yamne Valley, Abor Hills (*Oakes*).

"This species is of the type of *A. Oglei*, of the Noa Dihing Valley, south of the Brahmaputra, but is far larger, more globose, with a finer apex, and much stronger peristome. *A. aborensis* is also a close ally, but differs in form, slight crenulation, and the very different costulation on the swell of the last whorl." (*Godwin-Austen*.)

Subgenus **CHAMALYCÆUS**, *Kobelt & Mollendorff*.

Orthalycæus (part), Pfeiffer, Mon Pneum Suppl 3, 1875, p 57

Original description — "Shell turbinate, of tumid form, widely umbilicated, sculpture smooth, fine ribbing near the sutural tube and still finer below; colour pale ochraceous; spire moderately high, apex blunt; suture deep, the sutural tube short and thick; whorls $4\frac{1}{2}$, very rounded, the last much swollen and compressed within the umbilical cavity, constriction simple, slight; aperture oblique circular, peristome double, the outer lip flat and expanding at right angles to the whorl.

"Major diam 7.5, alt. axis 3 mm" (*Godwin-Austen*)

Hab. Nicobar Islands (*Busby*).

333. *Alycaeus canaliculus*, *Godwin-Austen*

Alycaeus canaliculus, *Godwin-Austen*, *Land & Freshw. Moll. India*, ii, 1914, p 371, pl. 154, fig 11

Original description — "Shell umbilicated, globose; sculpture smooth rather irregular, close, oblique, fine ribbing, not amounting to costulation until nearing the sutural tube, where strong costulation comes in, colour pale ochraceous; spire rather high, apex blunt, suture well impressed, the sutural tube shortish and stout; whorls 4, tumid and rounded, the last is sharply constricted just in front of the sutural tube, and expands again into a narrow ridge, which crosses the whorl diagonally to the edge of the peristome and then splays forward above, aperture circular, oblique angulate above, peristome double, strong, with a decided notch or channel on the lower margin, slightly rounded on the columellar margin, more so on the outer.

"Major diam 31, alt axis 15 mm"

Hab India. Teria Ghat, foot of the Khasi Hills (*Godwin-Austen*).

"The aperture recalls that of *A. gemma* of the Dafia Hills, but the shell differs in other respects." (*Godwin-Austen*.)

334. *Alycæus davisi*. *Godwin-Austen*.

Alycæus damis, Godwin-Austen, Land & Freshw. Moll. India, n, 1914, p 408, pl 148, figs 9, 9 a.

Original description — "Shell depressedly globose, well umbilicated, sculpture fine throughout, even next the sutural tube, first three or four liræ strong and distant, epidermis covers the surface which peels off in places; colour dull umber, spire low, apex flatly convex; suture well impressed, sutural tube long; whorls 4, the last very tumid, close, and in front of the constriction there is a well-defined ridge across the whorl, below it is close to the reflected peristome, aperture horizontally oval, oblique, subangulate above; peristome double, crenulated, four distinct notches, the upper on the upper margin, rounded on the columellar margin, operculum pale in colour, closely spiral with a small central depression.

"Major diam. 5.3, alt axis 2.1 mm" (*Godwin-Austen*)

Hab. Shan Boundary (*Woodthorpe*).

335. *Alycæus distinctus*, *Godwin-Austen*

Alycæus ingrami, var, Godwin-Austen, J A S B xli, part 2, 1871, p 92, pl 4, figs. 3, 3 a, 3 b, id, op cit xliii, 1874, p 150

Alycæus ingrami, var *nagaensis*, Godwin-Austen (part), J A S B xli, part 2, 1871, p 92, pl 4, fig 2, Nevill, Hand List, 1, 1878, p 292, Godwin-Austen, Land & Freshw. Moll. India, n, 1914, p 421.

Alycæus distinctus, Godwin-Austen, Proc Zool Soc 1893, p 592, id, Land & Freshw Moll India, n, 1914, p 390, pl 145, figs 3, 3 a, 3 b, p. 421

Original description — "Differs from the described form from Arakan [i.e. *ingrami*], in the mouth being larger, and there is a tendency to undulation on the outer margin of the peristome, generally two notches are present

"Major diameter 0.24" [6 mm.], minor diam 0.24" [6 mm.], alt. 0.16" [4 mm.], diam of aperture 0.11" [2.75 mm.], sutural tube 0.09" [2.25 mm.]" (*Godwin-Austen*)

Hab. India: Dimapur, Dumsiri Valley (300 ft.), Khunho Peak, Burrell Range (7000 ft.), Naga Hills (*Godwin-Austen*), Lhota Naga Hills, Asalu.

In 1893 Godwin-Austen, after comparing this shell with typical *A. ingrami*, became convinced that it was quite distinct and gave it the specific name of *distinctus*. Another form, from the Dafia Hills, originally considered to be a variety of *ingrami*, was likewise raised to specific rank under the name of *maingaron*.

A variety is recorded from Sadia, collected by M. Ogle, on page 363 of the same work and figured on pl 137, figs 2, 2 a, 2 b. It is stated to differ from the type in its flatter depressed shape, rounded aperture, and the shorter distance from it to the sutural tube.

Another variety, collected by F Ede at Naraindhur, Cachar, is described on page 391 and illustrated on pl 149, fig. 4. It is more elevated in the spire, and the aperture is more ovate than in the type, the columellar margin descending more obliquely. It measures: major diam. 5, alt 2.5 mm.

Yet another form is referred to on page 391. Nineteen specimens were collected by Godwin-Austen in the Jatinga Valley, North Cachar Hills, which are higher in the spire, with coarser sculpture and smaller umbilicus, while the peristome is devoid of the notches on the outer margin. The same form was obtained by W Chennell in South Sylhet, North Khasi and Garo Hills.

336 *Alycaeus edei*, Godwin-Austen

Alycaeus edei, Godwin-Austen, Land & Freshw Moll. India, II, 1914, p 391, pl 149, figs 2, 2a.

Original description.—"Shell openly umbilicate, globose, rather flattened; sculpture no costulation on the apical whorls, at the end of the sutural tube very fine close costulation commences, and increases very little in size forwards; colour whitish grey, some with a pink tint on the apex, spire low, apex rounded; suture moderately impressed, the tube long, whorls 4, the last swollen slightly, narrowly constricted and swelling again towards the aperture, aperture oval horizontally; peristome double, solid, inner sharply reflected, forming a broad margin viewed on the side, operculum black, smooth, spiral structure not seen in front, better seen at back, which is highly polished and with a central nipple.

"Major diam 7; axis 2.5 mm." (*Godwin-Austen*)

Hab India Naraindhur, Cachar

337 *Alycaeus inflatus*, Godwin-Austen

Alycaeus inflatus, Godwin-Austen, J A S B xliii, part 2, 1874, p 140, pl 3, figs 1-1d, Theobald, Cat Shells Brit India, 1876, p 39, Nevill, Hand List, I, 1878, p 291, Godwin-Austen, Land & Freshw Moll India, II, 1914, p 392, figs. 1b, 1c, 1d; var p 393, pl. 144, figs 1, 1a

Alycaeus (Chamalycæus) inflatus, Kobelt & Mollendorff, Nachr Deuts Malak Ges. xxix, 1897, p 151, id, Cat Pneum 1899, p 49, Kobelt, Das Tierreich, Lief 16, 1902, p 356.

Original description.—"Shell depressedly turbinate, solid, pale ochreous horny, moderately umbilicated, smooth, finely sculptured on the swollen portion of the last whorl adjacent to the sutural tube. Spire conoid, apex blunt; suture unimpressed; whorls $4\frac{1}{2}$, the last very much swollen for the size of the shell, constriction smooth, very short, sutural tube moderate; aperture oblique, circular, peristome double, solid, united, and reflected, operculum concave, black, its position at the very edge of the aperture.

"Major diam. 4.5, alt. axis 2.2 mm."

Hab India. Japvo Peak, Naga Hills, and Lanier River (*Godwin-Austen*). Var. Assam (*Stoliczka*).

"This shell in many respects assimilates to *A. conicus*, Miln, but is more openly umbilicated, in another direction it has the character of the subgenus *Dioryx*, viz in form of mouth, the short constriction, and position of operculum close to the edge of the aperture" (*Godwin-Austen*.)

In the variety seen on plate 144, figs. 1, 1a, the costulation on the swollen portion of the whorl is much stronger and the distance from the aperture much greater.

338 *Alycæus ingrami*, Blanford

Alycæus ingrami, Blanford, J. A. S. B. xxxi, 1892, p. 135, id., op cit xxxiv, 1895, p. 99, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 48, id., Novit. Alycæus scepticus (W. Blanford) (nom. nud.), Theobald, J. A. S. B. xxxi, 1892, p. 377, Blanford, op cit xxxiv, 1895, p. 101.

Original description.—"Testa late umbilicata, conoido-depressa, acute sinuato-costulata, albida, interdum rubello-albida, versus apicem ferruginea, vix translucens. Spira conoidea, apice obtusula, sutura pauca profunda. Anfr. 4 convexi, ultimus ad peripheriam subcompressus, ad latus mediocriter tumidus, ibidem confertissime costulatus, tum constrictus, prope aperturam non descendens. Spatium constrictum longitudinis mediocriter, costulatum, medio tumidum, tubulum suturale mediocre, $\frac{1}{2}$ peripheriæ subæquans. Apertura obliqua, circularis. peristoma duplex; externo breviter incrassato-expanso, interno expansiusculo, continuo. Operculum fusco-corneum, multispinum, externe per-concavum, nucleo centrali intus prominente papillari.

"Diam. maj. 6, min. 5, alt. $3\frac{1}{2}$; apert. diam. $1\frac{1}{2}$ mm."

Hab. Burma. Tongoup, Arakan (*Blanford*); Mai-i, Arakan (*Theobald*).

"Most nearly allied to *A. umbonalis*, B., from Pegu. It is distinguished from that species by its more raised spine, smaller size, shorter sutural tube, and shallower suture, by its less oblique mouth and non-descending last whorl, and by its duplex slightly expanded peristome, which contrasts strongly with the broadly reversed lip of *A. umbonalis*. That species also has the upper whorls much more closely, but less sinuously costulated than are those of *A. ingrami*. In the subangulation of the last whorl at the periphery there is some resemblance to the little Thavet Myo

A sculptilis, B, which, however, is easily distinguished by the characters of its crenulated peristome, besides other peculiarities." (Blanford)

339. *Alycaeus macgregori*, Godwin-Austen.

Alycaeus miami, var *nagaensis* (Godwin-Austen) (part), Nevill, Hand List, i, 1878, p 292, Godwin-Austen, Land & Freshw. Moll, ii, 1914, p. 421

Alycaeus macgregori, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p 356, pl. 141, figs 2, 2 a, 2 b

Original description.—"Shell openly umbilicate, globosely turbinate, sculpture close, fine regular costulation on the swollen portion of the last whorl following the sutural tube, it contracts behind this and the ribbing becomes much finer and wider apart, colour bleached; spire depressedly conoid, apex small, suture well-impressed, sutural tube moderately long; whorls 4, the first from aperture to sutural tube short, plain, *v e* with no ribbing, then much swollen and contracted again showing well on under sides; aperture circular, oblique, peristome moderately thickened, slightly reflected, within it is feebly plicate, columellar margin rounded

"Major diam 7, min 5.5, alt axis 2.5 mm"

Hab. India: Shengorh, Daffa Hills (Godwin-Austen)

"At a hasty glance I had named this shell *A nagaensis*. On a closer examination and comparison with that species it differs very materially, being much more globose as regards its form, and having crenulation within the aperture." (Godwin-Austen.)

340. *Alycaeus montanus*, Nevill.

Alycaeus montanus, Nevill, J A. S B 1, part 2, 1881, p. 149, pl 6, fig. 5, Nevill, Hand List, i, 1878, p 294, Godwin-Austen, Land & Freshw. Moll India, ii, 1914, p 341, pl 136, figs 3, 3 a

elevatis, confertissimis, ad umbilicum perspectivum nonnullis elevatis acutis, hyalina, nitida; spira brevi, apice subpapillari,

sutura impressa; anfractibus 4 subconvexis, ultimo ad latius, pone constrictionem, valde inflato, tubulum suturalem elongatum gerente, pone labrum tumidiusculo; apertura obliqua, subcirculari, peristomate duplici, interno breviter expanso, incrassato-reflexo externum celante, marginibus callo parietali expansiusculo semicirculari junctis. Operc. — ?

"Diam. major 10, minor 8, axis 6 mill"

Hab. India. Rungt Valley, near Darjeeling, 2000 ft.

"Larger than the Khasia *A. prosectus*, from which it is abundantly distinguished by the characters of the aperture, the less mucronate spire, its peculiar striation and lustre, shorter sutural tube, and the greater inflation of the last whorl. In *prosectus* the space between the constriction and the aperture is suddenly tumid near the constriction, the swelling decreasing towards the peristome; in *physis* the swelling increases gradually towards the mouth, which is not inclined to be so very oblique. There are faint indications of spiral sculpture evident in the facet-like appearance of the surface. Within the umbilicus, near the inflated part, every fourth or fifth of the scarcely elevated striæ (which would elsewhere be hardly distinguishable except for their white opacity on the hyaline ground) is raised into a knife-like edge

"In size and form *A. physis* nearly approaches *umbonalis*, but the colour, opakeness, great solidity, and the more moderate inflation of the last whorl, in addition to the more remote constriction, and the very different sculpture presented by the Burmese species, preclude any danger of confounding it with its Himalayan ally." (*Benson*)

The specimen here figured is in the British Museum.

345. *Alyceus sandowayensis*, Godwin-Austen.

Alyceus sandowayensis, Godwin-Austen, Land & Freshw. Moll. India, 11, 1914, p. 428, pl. 139, figs 4, 4a

Original description:—"Shell flatly conoid, openly perspectivevely umbilicated, flat on base; sculpture finely costulated throughout and closely set, the coarsest is near the constriction anterior to the sutural tube; colour dark umber-brown, spire depressed, apex small, suture impressed, the sutural tube is short, stout, and slightly bent over, whorls 4, evenly increasing, the last slightly swollen near the sutural tube, then slightly constricted, and again expanding slightly towards the aperture, aperture ovate horizontally, peristome double, reflected, not solid. Columellar margin rounded.

"Major diam 9, alt axis 3 mm" (*Godwin-Austen*.)

Alycaeus (*Chamalycaeus*) *stoliczkaei*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges xlix, 1897, p. 162, id., Cat. Pneum 1899, p. 48, Kobelt, Das Tierreich, Lief. 16, 1902, p 363.

Original description.—"Shell globosely turbinate, thick, pale horny, finely and closely ribbed from the swell of the first [? last] whorl as far back as the sutural tube, thence to the apex distantly and finely costulated, narrowly umbilicated, spire conoid, apex blunt, suture well impressed; whorls $4\frac{1}{2}$, rounded, the last swollen, then sharply constricted close to the origin of the sutural tube, again swelling and expanding to the mouth: constriction smooth, with a few distant lines of costulation. The sutural tube peculiarly long. Aperture oblique, circular, peristome double, outer lip small, the inner much produced and expanded into two broad, shallow channels on the inside of the outer margin, separated by a V-shaped thickening of the same. Operculum black, concave, of the usual multispiral form.

"Major diam. 0.31-0.28" [7.75-7 mm], minor 0.24-0.20" [6.5 mm.], alt 0.17-0.15" [4.25-3.75 mm]; diam. ap 0.12" [3 mm]; sutural tube 0.15" [3.75 mm]"

Hab. India. Angaoluo Peak, Naga Hills, 7000 ft (*Belletty*); Kezakenomih and head of Lanier River (*Godwin-Austen*), Kohima, Angham-Naga Hills. Lhota Naga Hills (var.).

"It comes near to the forms of *A. ingrami*, W. Blanford, var., pls. iv & v, J. A. S. B. vol. xl, part 2, 1871, from the same range of mountains, but its tumid shape, and particularly the very produced aperture, render it a very distinct and well-marked species.

"A single specimen. from Teria Ghat is very near this species, differing in being smaller, major diam. 4.75 mm., with a flatter spire, and costulation adjacent to the sutural tube very much finer, not so closely wound." (*Godwin-Austen*)

348 *Alycæus strigatus*, *Godwin-Austen*

Alycæus strigatus, Godwin-Austen, J. A. S. B. vol. xliii, part 2, 1874, p. 146, pl. 3, fig. 2, Theobald, Cat. Shells Brit. India, 1876, p. 40, Nevill, Hand List, i, 1878, p. 291, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, pp. 381, 401, pl. 144, figs. 2, 2a, 2b.

Alycæus (*Chamaelycæus*) *strigatus*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges., xxix, 1897, p. 152, id., Cat. Pneum., 1899, p. 48, Kobelt, Das Tierreich, Lief. 16, 1902, p. 363.

Original description.—"Shell pale corneous or amber, finely and evenly costulated throughout. Spire depressed, apex blunt and darker coloured. Suture moderate. Whorls $3\frac{1}{2}$, the last very little swollen, slightly constricted, with a single low ridge close behind the aperture, the constriction smooth and very finely striated. Sutural tube very short. Aperture slightly oblique, circular, peristome single, simple, continuous, moderately thickened. Operculum . . . ?

"Major diam. 0.15" [3.75 mm], minor diam. 0.11" [2.75 mm], alt 0.08" [2 mm], diam. ap. 0.05" [1.25 mm.]"

Hab. India. Assam (*Stoliczka*); Nenglo, near Asalu, North Cachar (*Godwin-Austen*)

"This is another species of the short-sutural-tubed section of *Alycaeus*, of which *A. khasiaticus* . . . is a good type. The general and distinct costulation from constriction to apex, particularly the form of constriction and mouth, mark it as a good species. It is more openly umbilicated than *A. khasiaticus*" (Godwin-Austen)

349. *Alycaeus subinflatus*, Godwin-Austen.

Alycaeus subinflatus, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 400, pl. 154, figs. 8, 8a

Original description — "Shell globosely conoid, sculpture indistinct subdued costulation on upper whorls, apex distinctly striate spirally, close, regular, rather fine costulation continuous with the sutural tube, colour with pinkish tinge, red on the apex; spire rather high, suture impressed; whorls 4, tumid and well rounded, sutural tube long, constriction near its base and distance to aperture short, with a very slight swelling, aperture oval, subangulate above, peristome solid and double on the outer margin, and well reflected but very thin on the columellar side

"Major diam 4.5; alt axis 2.2 mm"

Hab. Burma. Gaziphrim, Lahupa Naga Hills, N E Manipur.

"This is the species which I included in my description of *A. inflatus* from Japvo Peak in the Anghami Naga Hills. It is an allied form, and on closer examination I consider should receive a name, as it is something more than a variety. Comparison of the figures shows this better than description" (Godwin-Austen.)

Alycæus (Dicharax) armillatus, *Kobelt*, Das Tierreich, Lief 16, 1902, p. 365

Original description — "Testa umbilicata, depresso-turbinata, costulata; spira conoidea, sutura impressa, apice obtuso, anfractibus $3\frac{1}{2}$ convexis, ultimo ad latus inflato, confertius costulato, tum constricto, antice tumido, læviori, tubulo suturali brevi, ab apertura remoto, munito, apertura obliqua circulari, peristomate duplici, interno valde porrecto, continuo, margine simplici, extus striato, exteriori expanso, reflexiusculo, umbilico subaperto Operculo . . . ?

"Diam. major 2, minor $1\frac{1}{2}$, axis $1\frac{1}{4}$ mill."

Hab Burma. Thyet Myo (*Theobald*)

"The exterior expanded peristome, forming a conspicuous collar round the porrect interior portion, is the most prominent character in this very minute species. The only specimen received is in a weathered condition, and so much bleached that the colour of the perfect shell cannot be ascertained" (*Benson.*)

352. *Alycaeus asaluensis*, *Godwin-Austen*

Alycaeus crispatus var., *Godwin-Austen*, J. A. S. B. xli, 1871, p. 93, pl. 4, fig. 2

Alycaeus asaluensis, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p. 385, pl. 145, figs. 2, 2a, 2b

Original description — "Shell umbilicated, conoid, sculpture: strong, regular, rather distant costulation on the upper whorls, much stronger and closer on the swell of the whorl next the sutural tube, a few finer and distant on the constriction, which continue up to the aperture, colour whitish; spire conical, fairly high, suture impressed, sutural tube very fine; whorls 4, the last sharply constricted, then rising suddenly into a ridge which expands forwards to the double peristome; aperture circular, very oblique, peristome double, distinctly crenulated, but not strongly so; this is not seen in the figure, which was taken too much from the side to see it well.

"Major diam. 3.5, alt. axis 2 mm." (*Godwin-Austen.*)

Hab India Dihung River, north of Asalu, North Cachar (*Godwin-Austen*), Nenglo and Phulong

353. *Alycaeus ataranensis*, *Godwin-Austen*

Alycaeus crispatus, Theobald & Stoliczka, J. A. S. B. xli, 1872, p. 330

Alycaeus, n. sp. (prox. *A. crispatus*), Nevill, Hand List, i, 1878, p. 293, no. 36

Alycaeus ataranensis, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p. 426, pl. 148, figs. 4, 4a, 4b

Original description — "Shell globosely conoid, rather openly umbilicated; sculpture rather distant costulation on the upper whorls (specimen being old they do not show well); colour bleached; spire moderately high, apex blunt, suture impressed, whorls 4, the last slightly swollen near sutural tube, constriction very short, a well-marked ridge rising between it and the aperture, aperture irregularly oval, oblique, peristome double, inner lip with four deep notches, with intermediate sharp notches, outer undulated, both much expanded and protruding forwards, detached from the last whorl, forming a deep notch on the inner upper margin, columellar margin rounded.

"Major diam. 2.3, alt. 1.9 mm."

Hab Burma Ataran (*Stoliczka*)

"It is easily mistaken for *A. crispatus*, of the Naga Hills, but differs materially in the part between the suture and aperture." (*Godwin-Austen*)

354 *Alycæus avæ*, *Blanford*.

Alycæus avæ Blanford, J. A. S. B. xxvii, part 2, 1863, p. 323. id., op. cit. xxiv, 1865, p. 98, Hanley & Theobald, Conch Ind 1874, pl. 94, figs 8-10. Pfeiffer, Mon. Icon xx, 1877, *Alycaeus*, pl 1, figs 1a, 1b, Nevill, Hand List, 1, 1878, p 291, Godwin-Austen, Land & Freshw. Moll India, ii, 1914, p 388, pl 143, figs 8, 8a, 8b.
Alycaeus (Charar) crenatus, Kobelt & Mollendorff, Nachr. Deuts. Malak Ges xxix, 1897, p 152, id, Cat Pneum 1899, p 48
Alycaeus (Dicharar) crenatus, Kobelt, Das Tierreich, Lief 16, 1902, p 366

Original description — "Shell moderately umbilicated, depressedly turbinate, rather thin, translucent, pale horny or white, epidermis of former colour, peeling off in old shells, with very fine indistinct costulation throughout, fine close ribbing on the swell of the last whorl. Spire depressedly conoid, apex very blunt, suture well impressed. Whorls 4, rounded, the last moderately swollen, constricted close to the base of the sutural tube, with a marked subvertical ridge just behind the mouth. Construction smooth, sutural tube long, rather thick, aperture oblique; peristome round, deeply waved on the upper and outer but not on the columellar margin, outer lip small, slightly expanded. Operculum multispiral, concave in front, with a small projecting boss at the back. Animal pale coloured, tentacles dark brown.

"Major diam. 0.18" [4.5 mm], minor diam 0.16" [4 mm.], alt. 0.11" [2.75 mm.]; diam of aperture 0.08" [2 mm.]; sutural tube 0.075" [1.9 mm.]"

Hab. India Mokarsa, N.W. Khasi Hills, Hengdon Peak, Burrai Range, North Cachar, 5000 ft; Latinga and Diyung Valleys; Lhota-Naga Hills (*Godwin-Austen*).

"Near *A. plectocheilus*, but much larger, the ridge more distant from the peristome and the latter more expanded. In some specimens the edges of the outer whorls in the operculum are much raised and bent inwards as in *Cyathopoma*.

"No appreciable difference can be found between the western and eastern shells, one only, that in the latter the last whorl behind the aperture and within the umbilicus is more rounded—in the western there is a decided keel. From the Lhota-Naga Hills, one example must be considered a variety; it is closer wound with closer umbilicus and whorl subangulate near it." (*Godwin-Austen*)

360. *Alycæus crenulatus*, Benson

Alycæus crenulatus, Benson, A. M. N. H. ser 3, iii, 1869, p. 180, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 55, Hanley & Theobald, Conch. Ind. 1874, pl. 97, figs. 1, 4, Theobald, Cat. Shells Brit. India, 1876, p. 39, Sowerby, in Reeve, Conch. Icon. xx, 1877, *Alycæus*, pl. 5, fig. 43. Nevill, Hand List, i, 1878, p. 296, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 337, pl. 133, figs. 1-1 c.

Alycæus (Chaiar) crenulatus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xix, 1897, p. 152, id., Cat. Pneum. 1899, p. 48.

Alycæus (Dichaiar) crenulatus, Kobelt, Das Tierreich, Lief. 16, 1902, p. 367.

Original description — "Testa umbilicata, depresso-turbinata, dense oblique costulata, spira conoidea, sutura profundiuscula, apice papillari, anfractibus 4 convexis, ultimo rotundato, ad latus inflato, eo costulis confertioribus ornato, tum juxta peristoma breviter constricto, lævi, tubulo suturali elongato non procul ab apertura oriente munito; apertura vix obliqua, circulari; peristomatibus labro subduplici incrassato, exteriori reflexo, interiore crenulato quadruplicato aperturam vix coarctante, labio simplici, tenui, marginibus callo crasso prominente junctis umbilico profundo, margine rotundato Operculo — ?

"Diam. major 4, minor $3\frac{1}{2}$, axis 3 mill."

Hab. India. Rungun Valley, Sikhim, Darjeeling, Namgu, 2500 ft., and Langtam, Sikhim, 4000 ft. (Blanford), Damsang, Western Bhutan (Godwin-Austen).

"The constriction of the last whorl is near the aperture, without any intermediate ridge or swelling, in this respect showing an affinity with *amphoru* and *urnula*. In the crenulation of the peristome it exhibits an analogy with *sculptilis* of the normal group, in which the crenulations are twelve in number, with the origin of the sutural tube remote from the aperture.

"The specimens examined are all weathered and bleached. It is a singular circumstance, that each of the three natural sections of *Alycæus* should have an analogical connexion through the plicate peristomes of *sculptilis*, *plectocheilus*, and *crenulatus*" (Benson).

"The specimen figured, from Damsang, Western Bhutan, differs somewhat from specimens I have come across in Blanford's collection from Namgu and Langtam, Sikhim, in having much stronger higher costulation." (Godwin-Austen.)

361. *Alycæus crispatus*, Godwin-Austen.

Alycæus crispatus, Godwin-Austen, J. A. S. B. xl, part 2, 1871, p. 91, pl. 4, figs. 1 a, 1 b, id., op. cit. xlv, part 2, 1875, pl. 4, fig. 3, id., op. cit. xlv, part 2, 1876, p. 175, Theobald, Cat. India, ii, 1914, pp. 371, 389, pl. 145, figs. 1, 1 a, 1 b.

Alycaeus (*Charai*) *crispatus*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 162, id., Cat. Pneum. 1899, p. 48.
Alycaeus (*Dichaiat*) *crispatus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 367.

Original description —“Shell moderately umbilicated, turbinate, rather thin, pale horny, with fine subdistant plicate costulation on the upper part of the whorls near the suture, smoother below, finely and closely ribbed on the swollen portion of the last whorl. Spire conoidal, apex rather acute, suture well impressed. Whorls 4, rounded, the last moderately swollen at the side, next constricted and smooth for a short distance, then traversed by a slightly recurved ridge, more developed in some specimens than in others, with a nearly smooth interval behind the mouth, but gradually becoming impressed with longitudinal undulations near the peristome. Sutural tube moderate. Aperture diagonal, waved on the outer and upper margins. Peristome thickened, irregularly double, expanding with 4 or 5 undulations on the right side, extending from the point of junction with the last whorl to the base of the aperture, the inner salient angles strongly projecting in aged specimens. Operculum multispiral, thickened, convex behind, very concave in front.

“Major diam. of typical shell 2.5 mm.” (*Godwin-Austen*)

Hab. India: Khasia, Jaintia, and N. Cachar Hills, Burro Gorge, Dafa Hills; Shimbak, Gabir Valley, near the Garo frontier (*Godwin-Austen*).

Var. *makarsæ*, *Godwin-Austen*

Alycaeus makarsæ (*Godwin-Austen* MS.), Theobald, Cat. Shells Brit. India, 1876, p. 40 (nom. nud.)

Alycaeus crispatus, var. *makarsæ*, *Godwin-Austen*, Land & Freshw. Moll. India, n, 1914, p. 372, pl. 158, fig. 13.

Original description —“Shell depressedly conoid, rather openly umbilicate, sculpture distant and strong costulation on upper whorls, becoming coarser at the end of the sutural tube, up to the base of same, thence to aperture, very fine close liræ, colour whitish, spire low, apex blunt, suture moderately impressed; whorls 4, rounded, no ridge near the constriction, expanded at the aperture forward, forming a notch near the inner upper side which is conspicuous, aperture ovate; peristome double, broad, solid, with the very slightest approach to crenulation on the outer margin within aperture, columellar margin subvertical, with the outer lip expanded into a flange, operculum very black and smooth.

“Major diam. 3.5; alt. axis 1.5 mm.”

Hab. India: Makarsa, N. Khasi Hills (*Godwin-Austen*).

“It is much larger than typical *crispatus*” (*Godwin-Austen*)

Var. *minima*, *Godwin-Austen*

Alycaeus crispatus, var. *minimus*, *Godwin-Austen*, Land & Freshw. Moll. India, n, 1914, p. 373, pl. 148, figs. 5, 5a.

Original description :—" Shell globose pyramidal, umbilicated, sculpture distant costulation on the upper whorls, close, regular, and larger on swell of last whorl, colour whitish, spire conic, sides flat, suture impressed, the sutural tube moderately long, whorls 4, the last swollen next the sutural tube, then constricted and expanding again into a well-defined ridge running diagonally forward and spreading to the undulations of the peristome. aperture circular, peristome double, thickened, crenulated, with strong notches and four blunt processes which, on the outside, are represented by a navy outer lip

"Major diam. 2.6, alt. axis 1.2 mm" (*Godwin-Austen*)

Hab. India. Habiang, Garo Hills, West Khasi (*Godwin-Austen*)

Var rywukensis, Godwin-Austen.

Alycaeus crispatus, var *rywukensis*, Godwin-Austen, Land & Freshw Moll. India, II, 1914, p. 373, pl. 154, figs 3, 3a, 3b

Original description —" Shell small, depressedly and globose conical, well umbilicated, sculpture strong, distant, and regular costulation above, close and stronger next the sutural tube. colour whitish; spire rather low, apex blunt; suture impressed, the sutural tube fairly long, whorls $3\frac{1}{2}$, well rounded, the last is well constricted in front of base of sutural tube, then rises into a low but defined diagonally directed ridge and spreads forward, showing externally the shallow crenation with a decided notch next the sutural side; aperture irregularly ovate, suboblique; peristome double, crenulated on the upper and outer margin, not so below, and the columellar side rounded and suboblique, the crenulation is not deep, and the first upper fold extends forward and is the most conspicuous. Such is the description of the peristome of the type, but it is evidently not at full development. In the second example four well-defined notches and folds are seen, the lowest central and basal.

"Major diam 2.3, alt. axis 1 mm"

Hab India: Riwuk Valley, Garo Hills (*Godwin-Austen*)

"... size does not count for much, but this little Garo Hills shell also differs from typical *crispatus* by its much more depressed and different shape." (*Godwin-Austen*)

362. *Alycaeus cucullatus*, Theobald.

Alycaeus cucullatus, Theobald, J. A. S. B. xxxiv, part 2, 1870, p. 396, pl. 18, figs 2-2c, Hanley & Theobald, Conch Ind 1874, pl. 96, figs 1, 4, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 64. Theobald, Cat. Shells Brit. India, 1876, p. 39, Sowerby, in Reeve, Conch. Icon. xx, 1877, *Alycaeus*, pl. 2, fig. 12, Godwin-Austen, Land & Freshw. Moll. India, II, 1914, p. 407, pl. 155, fig. 5.

Alycaeus (Charax) cucullatus, Kobelt & Mollendorff, Nachr. Dents. Malak. Ges. xxix, 1897, p. 152, id., Cat. Pneum. 1899, p. 48.

Alycaeus (Dicharax) cucullatus, Kobelt, Das Tierreich, Lief. 16, 1902, p. 367

Original description — "Testa umbilicata, depresso subdiscoidea, rubente cornea, transversim striata, juxta suturam stris fortioribus sive costulis filiformibus confertissimis ornata; apice glabro, rufescente, elevatusculo, anfractibus quatuor, convexis, tubulo suturali modico, quantam peripheriæ vix æquante; strictura brevi, lævigata, stris nonnullis costiformibus ad basin et costa crassa transversa notata. Apertura parum obliqua, subrotundata, fere soluta, labro externe modice expanso, lamellose undulata, ad marginem paulo incrassato, 5-inciso, lamella supera maxime producta, labio simplici, paulo arcuato, supia vix adnato; operculo corneo, margine elevato nucleoque centrali parum excavato

"Diam. maj. .21 [5 25 mm], diam. min. .20 [5 mm.], alt. .21 unc. [5 25 mm.]"

Hab Burma. Shan States.

"This is a remarkably fine species with the crenulated lip of *A. plectochrilus* much exaggerated" (*Theobald*)

363 *Alycæus daflaensis*, Godwin-Austen.

Alycæus daflaensis, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 176, pl. 7, figs. 12, 12 a, 12 b, Nevill, Hand List, 1, 1878, p. 291, Godwin-Austen, Land & Freshw. Moll. India, 11, 1914, p. 354, pl. 145, figs. 11, 11 a, 11 b

Alycæus (*Dicharax*) *daflaensis*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 368

Original description — "Shell turbinate, moderately umbilicated, pale whitish or dull ochreous according to the state of the epidermis, finely ribbed throughout, rather more coarsely near the commencement of the swell of the last whorl, on this portion the ribbing is very fine and close. Spire conoid, apex blunt, suture impressed, the sutural tube moderate. Whorls 4, the last swollen, then constricted, and enlarging again into a well-raised ridge, which terminates below on margin of the peristome, it then descends and expands considerably with four deep longitudinal plications. Peristome single (no sign of the usual outer margin), continuous, with five plications on the outer margin, the lower margin recurved. Aperture oblique. Operculum multispiral, horny, with a large disc-like boss in the centre front side"

Hab India Toruputu Peak, 7000 ft, and Nios Ridge, Dafla Hills.

"The nearest form to the above is *A. digitatus*, H. Blf., described and figured in J. A. S. B. vol. xl, 1871, from Darjeeling, but the duplicate peristome in that shell is conspicuous, and forms a well-defined sharp edge where the expansion and plication of the inner lip commences. By the operculum alone it can be at once distinguished, and it is besides a much smaller shell.

"A dwarf variety occurs on Shengorh Peak, only 0.09 [2.25 mm.] in alt., not so expanded near the aperture, and with the plication less developed. On the Tanir Ridge, at 4000 feet, the same

shell, of ordinary size and with the same character of the aperture, occurs, showing an interesting and gradual change in form, the operculum is also different, being pale coloured, multispiral, and flatly concave in front. This form is in this respect much nearer to *A. digitatus*, and might be separated under the title var *subdigitatus*." (Godwin-Austen)

Subsequently the author appears to have somewhat modified his views with regard to the Shengorh Peak form, for in 1914 he observed that it is a mere variety, differing in its smaller size, more depressed and rounded spire, and finer costulation, at the same time substituting the name var. *nana*

364 *Alycæus dalingensis*, Godwin-Austen.

Alycæus dalingensis, Godwin-Austen, Land & Freshw. Moll India, ii, 1914, p 338, pl. 134, figs 3-3 c

Original description —"Shell narrowly umbilicated, globoseely conoid, rather solid, sculpture smooth on upper whorls, costulation near sutural tube close in low relief, the tube moderately long, colour dull ochraceous; spire moderately high, sides flat, apex rather blunt, suture impressed, whorls 4, rounded, regular in increase, constriction close to base of sutural tube, swelling at once towards the aperture, which is circular, with a nick or angle on the upper inner margin, peristome simple, double, reflexed, curving on the columellar side.

"Major diam 3·4, alt. axis 1·7 mm "

Hab India Rechila Peak, Daling District, on Sikkim and Bhutan Boundary (10,300 ft).

"This has a close resemblance to *A. lentiusculus*, but it differs in its general shape and the aperture from that species" (Godwin-Austen)

365 *Alycæus damsangensis*, Godwin-Austen

Alycæus damsangensis, Godwin-Austen, Land & Freshw Moll India, i, 1886, p. 192, pl 43, figs 3-3 c, ii, 1914, p 339

Alycæus subnotatus Nevill MS (nom nud), Godwin-Austen, Land & Freshw Moll India, ii, 1914, p 339

Alycæus (*Charax*) *damsangensis*, Kobelt & Mollendorff, Nachr. Deuts Malak Ges xxix, 1897, p 162, id, Cat Pneum 1899, p 48

Alycæus (*Dicharax*) *damsangensis*, Kobelt, Das Tierreich, Lief 16, 1902, p 368

Original description:—"Shell turbinate, very closely umbilicated, sculpture well-marked distant costulation on the upper whorls, coarse, close, regular on the enlarged portion of the last, colour dull, very pale ochraceous; spire high, conic, apex blunt, suture moderately impressed, tube mediocre, whorls 4, the last sharply constricted at base of the sutural tube, then enlarging suddenly into a recurved ridge, succeeded by a depression, and then another shorter ridge, and a pit-like depression in front of it, aperture

oblique, peristome double, but not thickened, columellar margin straight, subvertical, with slight notch below, operculum multispiral, brown.

"Major diam 3.8, alt. axis 3.2 mm."

Hab. India: Damsang Peak, Western Bhutan Hills (*W. Robert*).

"This shell assimilates somewhat, in the character of the constriction and the expansion of the whorl anterior to it, to *A. hebes*, Bs; but in the irregular wrinkled portion in advance of the main ridge crossing the swollen part it differs materially, and presents a most interesting approach to *A. notatus*, G.-A., of the Dafia Hills, the surface of which is more irregularly wrinkled and pitted; it is not so closely umbilicated, and the aperture is more angulate below. It appears to be a most abundant species." (*Godwin-Austen*)

366. *Alycaeus diagonus*, *Godwin-Austen*.

Alycaeus diagonus, Godwin-Austen, J. A. S. B. xl, part 2, 1871, p. 88, pl. 3, figs. 2, 2a, 2b, Hanley & Theobald, *Conch. Ind.* 1875, pl. 103, fig. 1; Theobald, *Cat. Shells Brit. India*, 1876, p. 39 (*A. diagonus*), Pfeiffer, *Mon. Pneum. Suppl.* 3, 1876, p. 388, Sowerby, in Reeve, *Conch. Icon.* xx, 1877, *Alycaeus*, pl. 1, fig. 2, Nevill, *Hand List*, i, 1878, p. 290; Godwin-Austen, *Land & Freshw. Moll. India*, ii, 1914, p. 389, pl. 148, figs. 5, 5a, 5b.
Alycaeus (*Chai az*) *diagonus*, Kobelt & Mollendorf, *Nachr. Deuts. Malak. Ges.* xxix, 1897, p. 152, id., *Cat. Pneum.* 1899, p. 48.
Alycaeus (*Duchan az*) *diagonus*, Kobelt, *Das Tierreich*, Lief. 16, 1902, p. 368.

Original description.—"Shell closely umbilicated, turbinate, thin, translucent, pale amber or pinkish colour, finely but distantly costulated on the two last whorls, closely so on the inflated portion of the last; spire conoid, apex blunt, suture well impressed, whorls 4, rounded, constricted closely near base of the sutural tube, then swelling largely towards the mouth, the commencement of the swell forming a diagonal or recurved ridge above; constriction smooth, sutural tube 0.053 inch [1.325 mm.] aperture diagonal, circular; peristome sinuate, double, inner lip continuous, outer expanded, slightly reflected at umbilicus and partially concealing it.

"Operculum concave in front, convex behind with a small central boss or nucleus

"Major diam. 0.145" [3.65 mm.], minor diam. 0.12" [3 mm.], alt. 0.10" [2.5 mm.], diam. of aperture 0.075" [1.88 mm.]."

Hab. India. Diyung Valley, North of Asalu, in N. Cachar District (*Godwin-Austen*), Naga Hills (*Roberts*).

"This shell is at first sight very like *A. hebes*, Bs., but can easily be distinguished by its much narrower umbilicus, its more polished surface and less expanded mouth.

"A small variety of this shell was obtained and deserves special notice. The striation is wanting throughout, and the costulation on the swollen portion of the last whorl is somewhat

shorter ; in these characters it approaches very near to *A nitidus*, W Blanford, from Arakan, but the recurved rib is in this last species much less developed " (Godwin-Austen.)

367. *Alycaeus digitatus*, Blanford.

Alycaeus digitatus, Blanford, J A. S. B. xl, part 2, 1871, p. 41, pl 2, figs 4, 4 a, 4 b, Pfeiffer, Mon Pneum Suppl. 3, 1875, p 64, Theobald, Cat Shells Brit. India, 1876, p 39, Nevill, Hand List, 1, 1878, p 294, Godwin-Austen, Land & Freshw Moll India, 11, 1914, p. 339, pl. 134, figs. 5, 5 a

Alycaeus (*Charax*) *digitatus*, Kobelt & Mollendorff, Nachr Deuts Malak. Ges xxix, 1897, p. 152 ; id, Cat Pneum 1899, p 48.

Alycaeus (*Dicharax*) *digitatus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 369.

Original description :—"Testa solida, depresso turbinata, umbilicata, albido-cornea, regulariter costulata ; pone aperturam usque ad tubulum striata. Spira parum excerta, apice obtusulo Anfractus 4, rotundatus ; ultimus inflatus, deinde constrictus, iterum abrupte expansus, denique abrupte constrictus, antice depressus et in 5 plicationes validas desinens. Tubulus post constrictionem oriens, recurvatus, $\frac{1}{2}$ anfractus subæquans Sutura impressa. Apertura perobliqua. Peristoma duplex, externum simplex evertatum, internum continuum, superne valde prolongatum, 5-plicatum Plica basalis abrupte recurvata. Operculum corneum, extus concavum

"Alt 3.6 mm, diam major 5.5, minor 4 mm Aperturæ alt. 2.25, lat. 2.75 mm"

Hab. India: Darjeeling, Rungno Valley, Sikkim Himalayas (Blanford, Aikinson); Rechila Peak, Western Bhutan Hills (Godwin-Austen)

"Of all the *Alycæ* yet described with plicate peristomes, this exhibits the character in the most exaggerated degree ; the free portion of the lip being prolonged into five digitiform folds, nearly a millimetre in length. The ridge-shaped fold between the two constricted portions is very abrupt, as in *Alycaeus plectocheilus*, which species, together with a yet unpublished form found by Major Godwin-Austen in the Khasi Hills, are its nearest allies. In some specimens, taken alive, the costulation has disappeared from the greater portion of the upper whorls, and remains only in patches ; so that on a cursory inspection the whorls appear to be smooth and striate ; it is most distinct on the inflated portion of the shell." (Blanford.)

Godwin-Austen refers to two specimens, found in the Blanford collection, with the MS name *fimbriatus*. The specimens are bleached and poor, and represent a dwarf variety of *A digitatus*.

368. *Alycaeus doherityi*, Godwin-Austen.

Alycaeus doherityi, Godwin-Austen, Proc Zool. Soc. 1893, p 595, id, Land and Freshw Moll India, 11, 1897, p 3, pl. 63, figs 3, 3 a, id, 1914, p. 408

Alycaeus (Charax) dohertyi, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 129, id., Cat. Pneum. 1899, p. 49

Alycaeus (Dichanar) dohertyi, Kobelt, Das Tierreich, Lief. 16, 1902, p. 369

Original description.—"Shell globosely turbinate, solid, not umbilicated; sculpture regular distant sharp costulation, closer and finer near the sutural tube, colour stone, with pink apex, spire rather high, conoid, rounded, apex blunt; suture impressed, the tube fine, rather long, whorls $1\frac{1}{2}$, the last swollen, constricted with a rounded ridge midway between the sutural tube and the peristome, aperture expanded, ovate; peristome double, fine sharp crenulations on the outer margin, rounded on the inner.

"Major diam. 3.25; alt. axis 2.8 mm."

Hab. Burma. Moineit (*Doherty*)

"This is quite a new form, partaking in the constriction and peristome of the characters of *A. plectochelus*, *crenatus*, etc." (*Godwin-Austen*.)

369. *Alycaeus duorugosus*, *Godwin-Austen*.

Alycaeus duorugosus, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p. 391

Original description.—"Shell very globose, umbilicated, sculpture smooth on the upper whorls, with indistinct striation, distant costulation on the last whorl, very fine and regular next the suture; colour umber-brown; spire high; suture impressed, the sutural tube short and thick; whorls 4, much rounded, the constricted part near sutural tube is fairly long, succeeded by two ridges well defined and both of nearly equal size lying close up to the peristome; aperture circular, somewhat flat above, well rounded below, peristome double, somewhat thickened and reflected. Columellar margin curving perpendicularly

"Major diam. 3.75; alt. axis 2 mm."

Hab. India. Burial Range, Naga Burma. Angauluo Trigonometrical Station, No. 2572, South Barak and Manipur (*Godwin-Austen*).

"This at first sight recalls *A. birugosus*, of the Khasi Hills, but is larger, more globose, the ridges near the aperture more developed, the aperture quite circular without the notch on the lower margin. It is near *A. khasiacus*, but smaller; the ridges in that species are unequal, the anterior much the smallest" (*Godwin-Austen*.)

370. *Alycaeus expatriatus*, *Blanford*.

Alycaeus expatriatus, *Blanford*, J. A. S. B. xlii, 1860, p. 123, id., op. cit. xxx, 1861, p. 349, *Pfeiffer*, Mon. Pneum. Suppl. 2, 1865, p. 52, *Hanley & Theobald*, Conch. Ind. 1876, pl. 145, figs. 1, 4, *Theobald*, Cat. Shells Brit. India, 1876, p. 39, *Sowerby*, in *Reeve*, Conch. Icon. xx, 1877, *Alycaeus*, pl. 5, fig. 45, *Nevill*, Hand List, i, 1878, p. 295, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p. 433

Alycaeus (Charax) expatriatus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 129, id., Cat. Pneum. 1899, p. 49

Alycaeus (*Dichaiar*) *expatriatus*, Kobelt, Das Tierreich, Lief 16, 1902, p. 369, fig. 82.

Original description —“Testa mediocriter umbilicata, depressa, ad anfractos internos obsolete, ad ultimum fortius, ad spatium inflatum valde, crebre costulata, corneo-albida, apice diaphane rubella, spira vix elevata, apice obtusa; sutura impressa; anfr. $3\frac{1}{2}$ convexi, ultimus ad latus mediocriter inflatus, deinde constrictus; constrictione longa, medio tumida, glabra, tubulum suturale pone constrictionem oriens, mediocriter longum, plerumque $\frac{1}{2}$ peripheriæ subæquans, sed nonnullis exemplis brevius, apertura circularis, obliqua, juxta anfr. penultimum retro curvatum, perist. duplex, internum breviter porrectum, continuum, externum expansum, interruptum, columellari margine strictum. Operculum corneum, distincte multispirum. Anfr. 7-8 planulatis, externe percon-cavum, nucleo centrali interno prominente papillari.

“Diam. maj. $4\frac{1}{2}$, min. $3\frac{3}{4}$, alt. $2\frac{1}{2}$, apert. diam. $1\frac{3}{4}$ mm.”

Hab. India. Neddooowuttom Ghat, Nilgiris, Anamullies and South Canara (*Blanford*); Shevroy Hills (*King*).

“This species appears to be more depressed in the spire than any other of the genus, except perhaps the Bornean *A. spiracellum*, A. Ad. & Reeve. Its nearest Indian ally is *A. strangulatus*, Hutton, and in size it is intermediate between that species and *A. stylifer*, Bens. It belongs to the section *Charax* of Benson, having a wide strangulation behind the peristome, crossed by a swollen ridge, which, however, in *A. expatriatus* never presents the sharpness so remarkable in *A. stylifer* and *hebes*, but is rather a broad tumid space separating two narrow constrictions. The sutural tube is variable in length, sometimes being nearly as sharp as in *A. strangulatus*, in other specimens as long as in *A. stylifer*, the latter being the usual case, the former the exception, but both occur in perfectly fresh and full-grown specimens.

“From *A. strangulatus* the species is distinguished by its greater size, more depressed form, more oblique aperture, by the recurvation of the peristome at its junction with the penultimate whorl, the longer sutural tube, the greater distance of the ridge crossing the constriction from the mouth, and the closer sculpture. From *prosectus* and *stylifer* the characters of the peristome, which is simple in *stylifer* and expanded at the columellar margin in *prosectus*, besides the smaller size of *A. expatriatus*, from *hebes* and *gemma* the slightly prominent ridge not recurved and the depressed form, afford abundant grounds for distinction. *A. spiracellum* of Borneo is probably closely allied, but we are only acquainted with that shell by its description. Judging therefrom, *A. expatriatus* should be distinguished by its smaller size, more narrow umbilicus, greater bluntness of the ridge in the constriction, and, in general, by the greater length of the sutural tube, a character which, however, is evidently, from its variability in this species, of less value than has hitherto been supposed.

" . . . The animal is small and colourless; the body very short; the sole undivided, tail short and rather pointed, tentacles short, yellowish; muzzle blunt, not elongated." (*Blanford.*)

Blanford in 1861 (*l. c.*) mentions a variety having been obtained by Mr. King from the Shevroys, a group of hills about 30 miles N of the Kolamulles. It only differs from the Nilgiri form in size, measuring in its two diameters $5\frac{1}{2}$ and $4\frac{1}{2}$ mm instead of $4\frac{1}{2}$ and $3\frac{1}{2}$.

Godwin-Austen records two specimens from the Shevroy Hills, larger than typical forms, the largest measuring 5.5 mm major diameter. Both have short sutural tubes, but the ridge crossing the constriction varies in elevation throughout. He also mentions specimens from the Anamulles, in the Beddome collection, the largest of which measures 6 mm in major diameter, while in all the ridge is quite high and the sutural tube short.

371 *Alycæus footei*, *Blanford.*

Alycæus footei, Blanford, J. A. S. B. xxx, 1861, p. 348, pl. 1, fig. 3, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 53, Theobald, Cat. Shells Brit. India, 1876, p. 39, Sowerby, in Reeve, Conch. Icon. xx, 1877, *Alycæus*, pl. 4, figs. 35a, 35b, Nevill, Hand. List, 1, 1878, p. 295, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 432.

Alycæus (*Charar*) *footei*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 129, id., Cat. Pneum. 1899, p. 49.

Alycæus (*Dicharar*) *footei*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 370.

Original description — "Testa aperte umbilicata, depressa, solida, ad anhiactos intenos striata, ad ultimum costulato-striata, ad spatium inflatum crebre costulata, spira vix elevata, apice obtusula; sutura parum impressa. Anfr. 4 convexi, ultimus ad latus mediocriter gibbosus, deinde constrictus, prope aperturam descendens, spatium constrictum longum, medio tumidum, striatum, costam validam retro recumbentem, peristomatis marginem dextrum ad basin attingentem, gerens, tubulus suturalis juxta constrictionem oriens, mediocrius, $\frac{1}{2}$ peripheriæ subæquans. Apertura perobliqua, circularis, undata, perist. duplex, interno breviter correcto, continuo, externo late expanso. Operc."

"Diam. maj. 6, min. $4\frac{1}{2}$, alt. 3, ap. diam. $1\frac{1}{2}$ mm."

Hab. India: Kolamulles (*King*), Wynaad (*Stoliczka*), Tinevelly and South Canara, Kadur District, Mysore (*Blanford*); Yercand, Shevroy Hills (*Godwin-Austen*).

"This shell is nearly allied to *A. expatriatus*, Blanf., of the Nilgiris, but distinguished principally by the possession of a recurved ridge upon the constriction, somewhat similar to that in *A. hebes*, Bens. and *A. gemmula*, Bens. Other differences are, the flatter suture and more oblique mouth, caused by the greater descent of the last whorl in *A. footei*, while the swelling at the side of the last whorl is somewhat greater, and the constriction more marked.

"From *A. hebes* and *A. gemmula*, the present species is easily

distinguishable by its flat spire, besides other characters of sculpture, etc. The ridge on the constriction *A. footer* lies back on the top of the whorl, and meets the peristome at the base of the right margin in the other two species the ridge is more at the side, and meets the peristome at the bottom." (*Blanford*)

Godwin-Austen publishes one of Blanford's numerous and valuable field-notes to the following effect —

"*Alyceus footer* from the Wynaad only differs from the Shevroy type in the spire being a little higher and the constricted portion of the last whorl between the swollen part and the mouth rather longer. The ridge on the constriction is reverted. Diam $5 \times 4\frac{1}{2}$, axis 3"

He also finds in the Blanford collection a variety of *A. footer* from the Kadur District, Mysore, having the ridges across the constriction high and narrow, not reverted, while in the same collection five specimens from Tinnevely the same ridge is very low and inconspicuous

372. *Alycæus gemma*, *Godwin-Austen*

Alycæus gemma, Godwin-Austen, Land & Freshw Moll India, II, 1914, p. 355, pl. 149, figs. 6, 6a

Original description — "Shell umbilicated, depressedly conoid; sculpture none on the upper whorls, a few indistinct, fine, costate ribs at suture, colour white; spire low, conoid, apex blunt; suture moderately impressed, the sutural tube short; whorls 4, well rounded, the constricted area is crossed by two ridges, the posterior broad, the anterior narrow and more conspicuous, aperture circular, angulate on upper margin, peristome double, angulate on lower margin, the outer very slightly reflected.

"One specimen only differs in being more solid, and has distant costulation on half of the 1st whorl.

"Major diam. 2.8; alt. axis 1.4 mm"

Hab India. No. 7 Camp, Dikrang Valley, Daffa Hills (*Godwin-Austen*)

"Only three specimens were found. The form recalls that of *A. gemmula*, Bs., of Darjiling, but has distinctive characters by which it may be readily known" (*Godwin-Austen*.)

373 *Alycæus gemmula*, *Benson*.

Alycæus gemmula, Benson, A. M. N. H. ser. 3, III, 1859, p. 179, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 52, Hanley & Theobald, Conch. Ind. 1874, pl. 93, fig. 7; Theobald, Cat. Shells Brit. India, 1876, p. 39, Sowerby, in Reeve, Conch. Icon. XX, 1877, *Alycæus*, pl. 5, fig. 37, Nevill, Hand List, I, 1878, p. 294, Godwin-Austen, Land & Freshw. Moll. India, I, 1886, p. 190, pl. 48, figs. 4-4c, II, 1914, pp. 340, 356

Alycæus (*Charax*) *gemmula*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 129, id., Cat. Pneum. 1899, p. 49

Alycæus (*Dichanax*) *gemmula*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 371.

Original description —“Testa umbilicata, conoideo-depressa, lævigata, nitida, ad ventriculum minutissime, ad umbilicum crasse striata, hyalina, spira conoidea, apice obtusiusculo, sutura profunda, anfractibus 4 convexiusculis, ultimo compresse rotundato, tum tumido, tubulum mediocrem gerente, tunc fossiculato-constricto, strictura crista recumbente, demumque area planata ab apertura separata, apertura obliqua, superne arcuatim prominente, peristomate duplici, valde incrassato-reflexo, intus superne ad angulum et infra ad basin leviter emarginato, umbilico profundo Operc —?”

“Diam. major $2\frac{1}{4}$, minor $1\frac{1}{2}$, axis $1\frac{1}{2}$ mill”

Hab India Rungun Valley, Sikhim (*Blanford*), Darjeeling (*Nevill*).

“Its affinities are with the Khasia *A. hebes*, but it is perfectly distinct in colour, smaller size, sculpture, narrower constriction behind the ridge, narrower umbilicus, and in the emargination visible within the aperture at the lower part” (*Benson*)

374. *Alycæus glaber*, *Blanford*

Alycæus glaber, *Blanford*, J A S. B. xxiv, part 2, 1865, p. 84, Hauley & Theobald, *Conch Ind* 1874, pl. 97, figs. 8-10, Pfeiffer, *Mon. Pneum. Suppl* 3, 1875, p. 60, Theobald, *Cat Shells Brit. India*, 1876, p. 39, Sowerby, in *Reeve, Conch. Icon* xx, 1877, *Alycæus*, pl. 4, fig. 31, *Nevill, Hand List*, i, 1878, p. 292, *Godwin-Austen, Land & Freshw. Moll India*, ii, 1914, p. 418, pl. 151, fig. 1.

Alycæus (Charax) glaber, *Kobelt & Mollendorff, Nachr. Deuts. Malak Ges* xxx, 1898, p. 129, id, *Cat Pneum* 1899, p. 49.

Alycæus (Dicharax) glaber, *Kobelt, Das Tierreich, Lief.* 16, 1902, p. 371.

Original description —“Shell broadly umbilicated, conoidly depressed, solid, reddish white, the upper whorls darker, rather dull in lustre, smooth, except at the swollen portion of the last whorl, which is very finely and closely costulated. Spire depressly conoid; apex rather obtuse; suture impressed. Whorls 4, convex, the last obsoletely subangulate at the periphery, moderately swollen at the side, then constricted, descending a little near the mouth. Constriction of moderate length, smooth, slightly swollen in the middle. Sutural tube of moderate length. Aperture diagonal, circular, peristome more or less distinctly duplex, thickened, moderately expanded. Operculum dark coloured, horny, externally concave, internally convex, with a prominent central nucleus.

“Major diameter $7\frac{1}{2}$, minor ditto 6, axis $4\frac{1}{2}$ millim.”

Hab. Burma Akyab, Arakan (*Blanford*).

“This species closely resembles *A. Ingrami*, W. Blanf., for which I for some time mistook it, but it is distinguished by the absence of any sculpture on the upper whorls, and also by the more oblique mouth” (*Blanford*)

375. *Alycæus globulus*, Godwin-Austen

Alycæus globulus, Godwin-Austen, J. A. S. B. xlii, part 2, 1874, p. 147, pl. 3, figs 4, 4a, 4b, Theobald, Cat. Shells Brit. India, 1876, p. 39, Nevill, Hand List, 1, 1878, p. 291, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 392, pl. 144, figs 4, 4a, 4b.

Alycæus (Charax) globulus, Kobelt & Mollendoiff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 129, id., Cat. Pneum. 1899, p. 49.

Alycæus (Dicharax) globulus, Kobelt, Das Tierreich, Lief. 16, 1902, p. 371.

Original description —“Shell moderately umbilicated, globosely turbinate, white, finely costulated on the shell of the first whorl, becoming gradually smooth thence to the apex; spire conoid, apex flat, rounded, whorls 4, flat, the last moderately swollen, then sharply constricted and again enlarged by a ridge from which emanate four minor longitudinal ridges on the expanded portion of the peristome; constriction narrow close to the sutural tube, this is moderate in length and about equal to the distance of its base to lip; aperture much expanded, oblique, round, angulate above, waved on the outer margin and channelled within, the outer lip of peristome thin, slightly recurved on the inner lower margin. Operculum black, multispiral, concave.

“Major diam 0.2” [5 mm], minor 0.16” [4 mm], alt. 0.1” [2.5 mm].”

Hab. India. Phunggum, a Naga village at head of Lamer Valley, 5000 ft.

“Near *A. crispatus*. Its larger globose form, long sutural tube, and more open umbilicus mark it as distinct.” (*Godwin-Austen.*)

376 *Alycæus habiangensis*, Godwin-Austen

Alycæus habiangensis, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 374, pl. 138, figs 2, 2a, 2b.

Original description :—Shell minute, turbinate, closely umbilicate, glassy, sculpture confined to about 16 fine close ribs next the sutural tube, the rest of shell showing very indistinct costulation, colour whitish, spire conical, suture impressed, the sutural tube short, whorls 4, the last constricted close to sutural tube, swelling towards the aperture in one broad ridge, having subsidiary undulations, aperture oblique, circular, peristome. example is young, and this is not continuous, it is simple, with no sign of crenation, columellar margin rounded, operculum not present.

“Major diam 3, alt. axis 1.3 mm.”

Hab. India. Habiang Garo, on West Khasi border (*Godwin-Austen*).

“This shell belongs to a group of *Alycæus*, characterized by having a short tube and a narrow band of costulation, the rest of the shell being generally smooth and more or less shiny. *A. khasiatensis*, G.-A., is one of the largest of this type of structure, it includes *conicus*, G.-A., *diagonus*, G.-A., and *pusillus*, G.-A.” (*Godwin-Austen*).

377. *Alycaeus hebes*, Benson

Original description —“Testa umbilicata, solidiuscula, depressa, vix striatula, ad spatium inflatum et circa umbilicum confertissime striata, carneo-albida, apicem versus rubella, spira conoidea, apice obtusiusculo, sutura impressa, anfractibus 4 convexiusculis, ultimo ad latus gibboso, tubulum mediocrem suturalem gerente, spatio constricto costa valida retro recumbente munito; apertura obliqua, circulari, peristomate continuo, duplici, interiori porrecto, exteriori expanso, incrassato

“Diam. major 4, minor 3, axis 3 mill.”

Hab. India. Terin Ghat, Khasi Hills (*Theobald*)

“This species occurs on rocks, and is distinguished by the structure of the aperture from the small Bornean *A. spinacellum*, A. & R. In the latter species, moreover, the rib behind and above the aperture is nearly parallel with the peristome, whereas in *A. hebes* it looks like a hoop which had fallen backwards on the whorl. In both species it takes its rise at the right side of the peristome, and ends at the suture, corresponding with an internal sulcus.” (*Benson*.)

378. *Alycaeus humilis*, Blanford

- Alycaeus humilis*, Blanford, J. A S B xxxi, 1862, p 136, id, op. cit. xxxiv, 1865, p 99, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p 49, Hanley & Theobald, Conch. Alycæus (Charax) khasiacus, Kobelt & Mollendorff, *Nachr. Deuts. Malak. Ges.* xxx, 1898, p. 129, id., *Cat. Pneum.* 1899, p. 49.

Alycæus (Dicharax) khasiacus, Kobelt, *Das Tierreich*, Lief. 16, 1902, p. 372.

Original description:—"Shell subturbinately depressed, openly umbilicated, translucent, varying much in colour from horny amber to pink- and dark red-browns; a shining surface, very finely striated under lens, very minute ribbing on the swell of the last whorl; in some specimens a faint costulation is seen. Spire depressedly conoid, apex very blunt, often darker coloured than rest of the shell. Suture impressed, whorls 4, well rounded, last moderately swollen, sharply constricted and again enlarging into two vertical ridges, that nearest the mouth being the least developed, and only extending across the upper portion of the whorl, being cut off by the peristome. Constriction smooth, sutural tube very short and thick at the base. Aperture oblique, round, slightly angulate above. Peristome more or less distinctly double, inner continuous, outer slightly expanded. Operculum multispiral, very concave in front, convex behind, no boss.

"Major diam. 0.15" [3.75 mm], minor diam. 0.13" [3.25 mm.], alt 0.09" [2.25 mm.]; diam. of aperture 0.07" [1.75 mm.]; sutural tube 0.025" [0.65 mm.]."

Hab. India. Khasi and Jaintia Hills; Cherra Poonjee, Assam (*Godwin-Austen*). Burma. Valley of the Barak, Munnipur (*Godwin-Austen*).

"The very short tube and very fine ribbing on the last whorl, and the plain surface of the rest of the shell, combine to make this a very distinct and well-marked species of the genus *Alycæus*.

"This species, only smaller in size and not with the red coloration of the typical Khasi Hills form, occurred on the Trigonometrical Hill Station of Angaoluo in the North Naga Hills. It measures 3 mm. in major diameter as against 3.5 mm. of the

type shell. I have true *Lhasiacus* from Jawai in the Jaintia Hills, from Mairang and Shillong. I also found it in the valley of the Barak, Mumpur, and at Asalu in the North Cachar Hills

"Among a large series of this species variation may be noted in a specimen here and there. The two ridges behind the peristome are only slightly developed, blend and nearly disappear. Such examples might be considered, if singly and separately collected, to be a different species. The short sutural tube then shows what the true relationship is." (*Godwin-Austen*)

381. *Alycæus kezamaensis*, *Godwin-Austen*

Alycæus kezamaensis, *Godwin-Austen*, Land & Freshw Moll India, II, 1914, p. 393, pl. 144, figs. 1, 1 a

Original description :—"Shell globosely conoid, umbilicated; sculpture distant, very regular costulation, at sutural tube fine and very close; colour dark ochraceous; spire conoid with flat sides, suture slightly impressed; whorls 4, not very rounded, the last viewed from above expanding slightly forwards, constriction close to base of sutural tube, then swelling slightly between it and the peristome, aperture semioval, angulate near suture peristome double, somewhat thickened and sinuate above

"Major diam. 2.9; alt. axis 1 mm"

Hab. India: Kezama, Anghami-Naga Hills (*Godwin-Austen*).

"A very small species with no very salient characters allied to *asaluensis*. A smaller shell, more globose, and differs in the form of the aperture" (*Godwin-Austen*.)

382. *Alycæus kurzianus*, *Theobald & Stoliczka*.

Alycæus (*Dicharax*) *kurzianus*, *Kobelt*, Das Tierreich, Lief. 10, 1902, p. 373.

Original description.—"A. testa subglobose conoidea, late umbilicata, pallide rubescente, anfractibus 4, valde convexis, sublævigatis, transversim distanter obsolete costellatis, ultimo anfractu medio ambitus modice inflato, confertim costulato, tum valde constricto lævigatoque, in constrictione costa obtusa transversa instructo, rursusque expansiusculo atque paulo deflexo; apertura magna, obliqua, subrotundata, supia obtuse angulata, infra anguste canaliculata, peritremate modice incrassato, duplici, externo paulum expanso, labro interno plicatulo, labio sublævigato.

"Diam maj specim maxim 3.5, minor 3, alt. 2.7 mm."

Hab. Burma. Nattoung, West Prome (*Theobald*), Pegu (*Kurz*).

"The peculiarly formed aperture with the lower canal and its internal plication on the outer lip readily distinguish this species from *A. polygona*, which besides differs by more rounded and higher whorls" (*Theobald & Stoliczka*)

383. *Alycæus lectus*, *Godwin-Austen*.

Alycæus, n sp, Nevill, Hand List, 1, 1878, p. 294, no 48

Alycæus lectus, Godwin-Austen, Land & Freshw Moll. India, II, 1914, p. 340, pl. 136, figs 5, 5 a, 5 b

Original description — "Shell conoid, rather solid, sculpture very much obliterated, fine distant costulation, some fine and close behind the sutural tube, which is rather short, 0.09 mm., colour (an old shell, much worn), spire depressedly conic, apex blunt, suture impressed, whorls 4, increasing regularly, constriction very narrow, the last swelling very slightly, and distance to the aperture very short, only 1 mm., angulate below next the umbilical region, aperture circular, oblique, peristome double, thickened.

"Major diam. 3.3, alt. axis 1.8 mm." (*Godwin-Austen*.)

Hab. India. Chaukkalan, near Darjeeling (*Stoliczka*).

Allied to *A. lenticulus*, but has distinctive characters.

384. *Alycæus lenticulus*, *Godwin-Austen*

Alycæus, n sp, Nevill, Hand List, 1, 1878, p. 294, nos. 48, 49

Alycæus lenticulus, Godwin-Austen, J. A. S. B. XLIII, part 2, 1874, p. 147, id, Land & Freshw. Moll. India, II, 1914, p. 340, pl. 136, figs 2, 2 a, 4, 4 a, 4 b

Original description — "Shell conoid, moderately umbilicated globosely conoid, sculpture not well seen, fine costulation near sutural tube, which is rather short, only 0.075 mm. long, colour bleached; spire conic, rather high, apex blunt; suture rather shallow, whorls 4, very evenly increasing, the constriction slight, short, then swelling gradually towards the aperture, aperture very oblique, ovate, straight on outer margin, rounded on the columellar side, angular above; peristome double, very slightly thickened.

"Major diam. 3.4; alt. axis 1.4 mm"

Hab. India. Darjeeling (*Stoliczka*), Rungun Valley, Sikkim (*Stoliczka, Mainwaring*), Rissom Peak, Western Bhutan Hills.

"... It is very similar to *A. theobaldi*, Bs, from the Khasi Hills, but is smaller with a more expanded aperture, peristome less thickened, and the sculpture appears to have been very fine.

"No. 49 of Nevill's Hand List, p. 294, I consider *A. lenticulus*, three are adult shells, of which I figure one (pl. 136,

figs. 4-4 b), as the type specimen is certainly not fully grown. This specimen is more globose, the peristome much thickened, and shows fine close costulation contiguous to the sutural tube" (Godwin-Austen)

385. *Alycæus multirugosus*, Godwin-Austen.

Alycæus multirugosus, Godwin-Austen, J A S B xliii, part 2, 1874, p. 149, pl. 3, figs 7, 7 a, Theobald, Cat Shells Brit India, 1876, p. 40, Godwin-Austen, Land & Freshw Moll India, ii, 1914, p. 395, pl. 144, figs 7, 7 a.

Alycæus (*Dicharax*) *multirugosus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 373

Original description.—"Shell depressedly turbinate, rather openly umbilicated, translucent, pale corneous, smooth glistening surface, very minute ribbing near sutural tube. Spire flatly conoid, whorls 4, flat, the last very little swollen, constricted and enlarged again towards the aperture into a zigzag-shaped ridge or what might be described as three parallel and connected ridges. Suture short. Aperture oblique, circular; peristome double, both continuous and the outer slightly reflected. Operculum .

"Major diam. 0.12" [3 mm], minor diam. 0.08" [2 mm], alt 0.08" [2 mm], sutural tube 0.037" [0.9 mm]."

Hab. India. Hills at head of Lanier River, Naga Hills, 5-6000 ft. (Godwin-Austen)

"A close ally of *A. khasiacus*, mihi, but a much smaller shell; the many ridged area near constriction, however, is a wide departure from that form." (Godwin-Austen)

386. *Alycæus mutatus*, Godwin-Austen.

Alycæus mutatus, Godwin-Austen, J A S B xlv, part 2, 1876, p. 177, pl. 7, figs. 11, 11 a, Nevill, Hand List, i, 1878, p. 291, Godwin-Austen, Land & Freshw Moll India, ii, 1914, p. 357, pl. 145, figs 9, 9 a, pl. 167, fig 8.

Alycæus khasiacus (1876 not 1871), Godwin-Austen, J A S B. xlv, part 2, 1876, p. 175 + var. Daffa.

Alycæus (*Dicharax*) *mutatus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 373.

Original description :—"Shell subturbinately depressed, openly umbilicated, fragile, covered with a scabrous dull ochreous epidermis, which peels off in old shells, very regularly and strongly striated throughout, the ribbing on the last whorl very fine. Spire subconoid, apex rather blunt, suture deeply impressed. Whorls 4, rounded, the last swollen, moderately constricted, then again expanded and crossed by two ridges, the last of these not extending all round the whorl. The constriction very regularly ribbed. Suture short, thickened at the base. Aperture oblique, circular. Peristome double, but closely united, very

slightly reflected. Operculum multispiral, the edges of the outer whorls in high relief so as to form a deep cup-like hollow in the centre.

"Alt. 0 10 [2·5 mm], major diam. 0 20 [5 mm], sutural tube 0 055 in [1·375 mm]"

Hab. India: Toruputu, Tann, Shengohr Peaks; Yetay Ravine, Dikrang Valley, 6-7000 ft; Valley of the Dikrang and Borpani, Dafia Hills (*Godwin-Austen*)

"This shell is an interesting ally of *A. khasiacus*, from which it differs in its thick, well-ribbed epidermis, but more especially in the very different form of the operculum, which in *khasiacus* is quite smooth and concave in front. It is also a smaller and more delicately formed shell" (*Godwin-Austen*.)

387 *Alycæus neglectus*, *Godwin-Austen*.

Alycæus neglectus, *Godwin-Austen*, Land & Freshw Moll. India, II, 1914, p. 368, pl 154, fig 5.

Original description —"Shell globosely pyramidal, openly umbilicated, remains of a dark epidermis, sculpture on upper whorls, fine, irregular, rather close, raised striæ, becoming finely costulate for the length of the sutural tube; colour whitish, probably pale brown when younger; spire fairly high, apex small; suture impressed, the tube moderately long; whorls 4, well rounded, the last slightly constricted then swelling into a straight ridge halfway between the costulate portion and the aperture; aperture oval, oblique, peristome simple, straight, yet curving slightly on the columellar side, rather flat below, curving up on the outer margin; operculum black, smooth.

"Major diam. 5 25, alt. axis 3 mm."

Hab. India. Toruputu Peak, Dafia Hills (*Godwin-Austen*)

"In form quite distinct from *A. theobaldi* of the Khasi Hills." (*Godwin-Austen*)

388. *Alycæus nongtunensis*, *Godwin-Austen*.

Alycæus nongtunensis, *Godwin-Austen*, Land & Freshw Moll India, II, 1914, p. 378, pl 188, figs. 5, 5 a.

Original description —"Shell globosely and tumidly turbinate, closely umbilicated, glassy lustre, sculpture the costulation is confined to a narrow belt near the sutural tube, a slight indication of distant costulation on the first whorl in front; colour pale burnt sienna, spire low, conic, sides very slightly convex; suture impressed, sutural tube short, whorls 4, well rounded, the last only slightly constricted, and spreads forwards from the sutural tube for a considerable distance, with a smooth rounded surface, aperture circular, a slight angulation above; peristome double, continuous, the inner expanded, columellar margin rounded.

"Major diam 2 8; alt. axis 1 25 mm" (*Godwin-Austen*)

Hab. India. Nongtung, Jaintia Hills (*Godwin-Austen*).

389. *Alycæus notatus*, *Godwin-Austen*.

Alycæus notatus, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 176, pl. 7, figs 9, 9a, 9b, Nevill, Hand List, 1, 1878, p. 291, Godwin-Austen, Land & Freshw. Moll. India, 1, 1886, p. 191, pl. 48, figs 2, 2a, 2b, id, op cit II, 1914, p. 358, pl. 145, figs. 8, 8a

Alycæus (*Charax*) *notatus*, Kobelt & Mollendorff, Nachr. Dents. Malak. Ges. xxx, 1898, p. 129, id, Cat. Pneum. 1899, p. 49

Alycæus (*Duchanax*) *notatus*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 374.

Original description — "Shell globosely turbinate, narrowly umbilicated, of solid form, white; distant strong costulation on the upper whorls, close and fine ribbing on swollen portion of the last. Spire conoid, suture fairly impressed. Whorls $4\frac{1}{2}$, closely wound, the last swollen, then sharply constricted, and again enlarged and descending, the expanded portion being marked with deep fold-like furrows. Sutural tube moderate, aperture oblique. Peristome very thick, distinctly treble in full-grown shells, outer layer terminating just behind the aperture, the inner continuous, the two outer much reflected near the umbilicus. Operculum smooth in front.

"Alt. 0.14 [3.5 mm.], major diam. 0.17 in [4.25 mm.]"

Hab India on the slopes of Toruputu Peak, 3000 ft., Daffa Hills, Naga Hills (*Godwin-Austen*)

"This is one of the most distinct and curious I have yet discovered, the fold-like indentations upon the expanded portion near the aperture having no counterpart in any other form with which I am acquainted. In other respects it is somewhat similar to *A. diagonus*, in the strong thick peristome and closely wound whorls." (*Godwin-Austen*)

390. *Alycæus notus*, *Godwin-Austen*

Alycæus notus, Godwin-Austen, Land & Freshw. Moll. India, II, 1914, p. 411, pl. 155, fig. 12

Original description — "Shell umbilicated, depressedly conoid, rather solid, sculpture on upper whorls fine very close costulation, becoming more distant as the end of the sutural tube is reached, it is then particularly fine and close, smooth behind aperture, colour stony white, some having a pink apex, spire low, apex blunt; suture impressed, the sutural tube rather short; whorls 4, rounded, constriction slight near base of sutural tube, then swelling very slightly forward to the peristome, aperture ovately circular, peristome double, thick, inner continuous, plain, outer reflected, operculum closely spiral, brown.

"Major diam. 3, alt. axis 1.5 mm" (*Godwin-Austen*.)

Hab Burma Fort Stedman (*Woodthorpe*)

Like *armillatus*, but much larger

391. *Alycæus obscurus*, *Godwin-Austen*.

Alycæus obscurus, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p 378, pl. 154, figs. 9, 9 a

Original description.—"Shell umbilicated, globosely conical, sculpture, fine somewhat distant costulation on the upper whorls, next the sutural tube becoming much stronger and closer; colour whitish, spire conic, sides flat, apex small; suture impressed; whorls $4\frac{1}{2}$, the last sharply constricted close to the sutural tube, then swelling into a sharply curving ridge and expanding forwards to the aperture, about halfway a well-defined narrow ridge extends across the whorl from side to side, aperture oblique, widely ovate, expanding; peristome double, the outer much expanded on the inner lower margin, the inner shows crenulation extending backwards internally, the two combined are vertical on the columellar margin.

"Major diam 4; alt axis 2 mm"

Hab India Cherra Poonjee, Assam.

"This was among some unnamed *Alycæi* from Cherra Poonjee and Teria Ghat, kindly sent to me by Mr. John Ponsonby. I have nothing like it in my own collection from those places and I have reason to think the locality correct. It has several well-marked characters." (*Godwin-Austen*.)

392. *Alycæus ochraceus*, *Godwin-Austen*.

Alycæus ochraceus, Godwin-Austen, Proc. Zool. Soc 1893, p 594; id, Land & Freshw Moll India, ii, 1897, p 3, pl. 63, figs. 7, 7 a, 7 b; id, op. cit ii, 1914, p 411.

Alycæus (Charax) ochraceus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges xxx, 1898, p 129, id, Oat. Pneum 1899, p 49

Alycæus (Dichax) ochraceus, Kobelt, Das Tierreich, Lief. 18, 1902, p 374.

Original description —"Shell sub-depressedly turbinate; sculpture rather strong ribbing on the swollen part of the last whorl, on the apical whorls it is close and fine, colour ochre; spire somewhat flattened, apex blunt, suture deep; whorls 4, the last moderately swollen, sharp constriction in front of sutural tube, followed by a strong ridge which is contiguous to the crenulate peristome, aperture circular, suboblique; peristome strongly crenulated, double; operculum horny, a large central excavated circular space, surrounded by a pale ring, rising above to the marginal portion.

"Major diam 4.5, alt. axis 1.5 mm."

Hab Burma Ruby Mines District (*Doherty*)

"The nearest known species allied to this is *A. crenatus*, of the Khasi Hills, but the ridge behind the aperture in this last lies further back with a short interval, the peristome is not so strongly crenulate. *A. plectocheilus* of Daryling is a much smaller form" (*Godwin-Austen*)

393. *Alycæus pachitaensis*, *Godwin-Austen*.

Alycæus pachitaensis, Godwin-Austen, Land & Freshw Moll. India, i, 1886, p. 190, pl. 48, figs 5-5 c, n, 1914, p. 359

Alycæus (*Charax*) *pachitaensis*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 129, id., Cat. Pneum. 1899, p. 49

Alycæus (*Dicharax*) *pachitaensis*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 374

Original description — "Shell depressedly turbinate, openly umbilicated, small, sculpture apical whorls quite smooth, some distinct distant costulation on the posterior side of the last whorl, succeeded by very fine and close on the swollen portion of the same, colour dull whitish ochre, spire subconoid, apex blunt, suture impressed, the tube short, whorls 4, the last swollen, the constriction close to the sutural tube, slightly enlarging again midway between it and the peristome, and this portion quite smooth, aperture oblique, ovate, angular above and below, peristome double, thickened, with a well-defined notch below, columellar margin concave, operculum multispiral, horny, brown

"Major diam. 3.2, alt. axis 2.6 mm."

Hab. India. Pachita Village (Camp No. 7 of the Expeditionary Force, 1874-75), Daffa Hills, Assam (*Godwin-Austen*).

"This shell finds its nearest ally in *A. gemmula*, Bs., of the Darjiling side, but the distinct ridge next the constriction is reduced to a mere even swelling of the whorl, and the peristome and form of aperture differ, it is also larger." (*Godwin-Austen*)

394. *Alycæus peilei*, *Preston*.

Alycæus (*Charax*) *peilei*, Preston, Proc. Malac. Soc. xi, 1914, p. 22 text-fig

Alycæus peilei, Godwin-Austen, Land & Freshw Moll. India, ii, 1914, p. 397

Original description — "Shell irregularly discoidal, moderately depressed, white; whorls 4, the last gibbous, thin, strongly sculptured, and again becoming gibbous just behind the labrum sculptured with fine, somewhat distant, transverse, arcuate striæ which become closely crowded on the last whorl; suture rather deeply impressed, tube about 3 mm in length; umbilicus rather widely ovate, deep; columella obliquely curved, labrum continuous, double above, treble below, erect, sinuous, having two notches, one broad in front, the other narrower above, aperture irregularly sub-circular.

"Alt. 4, diam. maj. 6.5, min. 5.5 mm. Aperture alt. 1.4 diam. 1.75 mm." (*Preston*)

Hab. India. Naga Hills.

395. *Alycæus plectochulus*, *Benson*.

Original description —“Testa aperte umbilicata, depresso-turbinata, confertim striatula, stris nonnullis ad suturam elevatis, nitente, subpellucida, rufescenti-albida, spira brevi, depresso-conoidea, apice obtuso, sutura impressa, anfractibus $3\frac{1}{2}$ convexis, ultimo rotundato, profunde constricto, tubulum mediocrem gerente, strictura cista angusta elevata, intus cavo-sulcata, peristoma expansum simulante, ab apertura separata; apertura vix obliqua, subcirculari, peristomate duplici, margine columellari leviter incrassato-reflexo, dextrali valde incrassato-porrecto, fortiter acutangulatum crispo-plicato, plicis quinque aperturam arcuantibus, marginibus callo prominente angulato junctis. Operc. —?”

“Diam major $2\frac{1}{2}$, minor 2, axis vix 2 mill.”

Hab India: Rungun Valley, Darjeeling (*Blanford*, *Mamwaring*), Damsang Peak, Western Bhutan, large var.

“The dimensions given are those of the largest of four specimens. The strenuously vandyked plication of the incrassate edges of the perfect dextral side of the peristome is a remarkable feature in this minute species. It recalls the curious fill in *Pterocyclos bilabiatulus*, Sow, but in a more exaggerated guise, notwithstanding the smallness of the shell. The edges of the folds are thickened and slightly reflected. Its smaller size, sculpture, and wider umbilicus, and, above all, the mode of construction, prove that it is not an exaggerated form of *crenulatus*. The deceptive appearance of the ridge or crest at first induced me to class the shell with *Dioryx*; but a closer investigation of the mode in which the ridge was attached to the true peristome, and a view of the internal sulcus, revealed the true position of the species.” (*Benson*)

“The operculum of this specimen [large var] is multispiral, smooth and black” (*Godwin-Austen*.)

396. *Alycaeus polygonoma*, *Blanford*.

Alycaeus (Dicharax) prosectus, Kobelt, Das Tierreich, Lief 16, 1902, p 375

Alycaeus prosectus, var, Godwin-Austen, Land & Freshw Moll India, ii, 1914, p 381

Original description —"Testa mediocriter umbilicata, subcampanulato-depressa, subremote striatula, stris elevatis spiralibus remotiusculis cincta, ad spatium inflatum anfractus ultimi confertissime et acutissime costulata, albida, versus apicem mucronatum rubella, spira brevi, sutura profunda, anfractibus 4 convexis, subapicali exserto, ultimo ad latus pone stricturam valde gibboso,

tubulum suturalem mediocrem gerente, antice læviori, apertura valde obliqua, circulari, peristomate simplici vel duplici, interiori duplicis expansiusculo, exteriori dilatato, superne ad angulum et ad basin alato-producto, margine columellari angusto. Operculum concavo, lævi, multispirato.

"Diam major 7, minor 6, axis 5 mill"

Hab. India Teria Ghat, Khasi Hills (*Theobald*), extending west to Habiang, Garo Hills, and east to South Jaintia (*Godwin-Austen*).

"It is related to the Burmese *A. umbonalis* and to *A. stragulatulus*, Hutton Inferior in size to the former, it is easily distinguished by its sculpture and by the peculiar development of the outer lip at its insertion and base, while the narrow columellar lip gives an appearance of artificial truncation to the peristome at that part. In the variety the internal lip is not developed. The margins of the whorls in the operculum are not conspicuously raised as in *A. umbonalis*." (*Benson*.)

Godwin-Austen records a variety—unnamed—from Cherra Poonjee, in the Ponsonby collection, which is smaller than the usual typical form, and though quite similar in shape, shows a decided tendency to crenulation on the outer margin of the peristome; a similar tendency he observed in other species.

Some specimens from Teria Ghat he noted being as much as 8 mm. in major diameter, varying much in size even from this locality, fully-grown specimens being only 6 mm. From some places all are small, G. Nevill distinguished them as var. *minor*.

From Ryvuk, at the foot of the Garo Hills, he found the form to differ considerably in having a tendency to a crenulate peristome.

398. *Alycæus rechilaensis*, *Godwin-Austen*.

Alycæus rechilaensis, Godwin-Austen, Land & Freshw Moll. India, ii, 1914, p. 343, pl. 134, figs 2, 2 a

Original description — "Shell very openly umbilicated, depressedly conoid, covered with a strong epidermis, sculpture costulation strong, very close and regular on upper whorls, still more so next sutural tube, where 21 ribs can be counted, the tube is rather short; colour ochraceous with a green tinge, spire low, apex small; suture well impressed, whorls 4, tumid, sides rounded, the distance from the constriction to the aperture is not great, and is crossed just behind it by a well-defined ridge of regular breadth, aperture circular, obtusely angulate on upper inner margin; peristome simple, double, not reflected, operculum black, multispiral, concave, whorls rough and raised above each other.

"Major diam. 5, alt. axis 2.75 mm" (*Godwin-Austen*)

Hab. India Rechila Peak, Dalm District, on Sikhim-Bhutan Frontier, 10,300 ft

399. *Alycæus richthofeni*, *Blanford*.

Alycæus (Dicharax) theobaldi, Kobelt, Das Tierreich, Lief. 16, 1902, p. 377.

Original description :—"Testa aperte umbilicata, conoideo-depressa, corneo-albida, translucens, costulis elevatis, sinuatis,

remotis ornata, inter costulas striatula Spira depresso-conica, apice obtusula, sutura impressa Anfractus $3\frac{1}{2}$ convexi, ultimus ad latus mediocriter tumidus, ibidem confertissime costulatus. Spatium constrictum longum, striatulum, medio tumidum Tubulum suturale mediocre, $\frac{1}{4}$ peripheriæ subæquans. Apertura obliqua, expandens, circularis, peristoma ad anfractum penultimum breviter interruptum, marginibus callo junctis, duplex, externo expansulo, interno breviter porrecto. Operc. corneum, multispirum, exteune perconcaevum, nucleo centrali interno prominente papillari.

"Diam. maj. 4, min. $3\frac{1}{4}$, alt. $2\frac{1}{2}$, ap diam. $1\frac{1}{4}$ mm."

Hab India: Khasi Hills (*Theobaldi*)

"I received two specimens of this species from Mr. Theobald as *A. hebes*, Bens., of which they were supposed to be young shells. They, however, prove, on closer examination, to be fully grown and distinct, the slight swelling in the centre of the constriction contrasting strongly with the high recurved ridge in *A. hebes*. This alone would shew the present to be a different species, but it is also distinguished by its lower spire, narrower umbilicus, smaller size, and thinner and interrupted peristome, the last character not occurring in any other species of the genus. The well-marked distant costulation of the upper whorls of *A. theobaldi* is entirely wanting in *A. hebes*. The operculum of the latter does not appear to have been described. A single specimen in my possession is dark horny, indistinctly multispiral, extremely concave in front, and convex, almost conical, behind, and deficient in the central boss so prominent in most *Alycus*

"Although there is a swelling in the centre of the constriction in *A. theobaldi*, it does not amount to a marked ridge, such as characterizes the typical forms of the section *Charax* of Mr. Benson, e.g. *A. stylifer*, B. It is consequently not clear whether this species should be classed with the members of that section, or with those of the typical group. Several species indeed tend to connect these two subdivisions, which more recent discoveries have rendered less distinct than they appeared to be when first described" (*Blanford.*)

"This species is variable in size, retaining its principal characters. Thus from the North Khasi Scarp, near Maotherichan Trigonometrical Station, I obtained eight specimens far larger than those from Cherra Poonjee. Three of the largest measure 5 mm in diameter as against 4 from the last named locality. It was found at Shillong and Jawai" (*Godwin-Austen*)

Var solidus, *Godwin-Austen*.

Alycus theobaldi, var. *solidus*, Godwin-Austen, Land & Freshw. Moll India, II, 1914, p. 383, pl. 155 fig 10

Original description — "Shell depressedly and conoidly globose, openly umbilicated, solid; sculpture very distant, strong costulation above, next sutural tube, which is not very long—there are 23 ribs, nearly twice as strong as in typical *theobaldi*, which has

about 36, much closer together; colour pale ochraceous, spire low; suture impressed; whorls 4, rounded, constriction sharp, swelling slightly to the aperture, the distance being greater than in *A. theobaldi*; aperture nearly circular, angulate above, and much expanded; peristome double, inner continuous, outer much expanded but not reflected.

"Major diam. 3.5; alt. axis 1.6 mm."

Hab. India: Garo Hills (*Godwin-Austen*)

"Five of this pretty form are in the collection, although very close to *A. theobaldi*, it is easily distinguishable in its size, general form, and sculpture." (*Godwin-Austen*)

Var. diyungensis, *Godwin-Austen*

Alyceus theobaldi, var. *diyungensis*, *Godwin-Austen*, Land & Freshw. Moll India, ii, 1914, p 401, pl 138, fig 4

Original description:—"Shell well umbilicated, depressedly turbinate, sculpture rather strong, regular, close costulation extending just beyond the end of the suture, the rest of the shell smooth, finely striate, with very distant costulation, colour ochraceous, some with a green tint; spire conic, depressed; suture well unpressed, the tube moderately long, whorls 4, rounded, aperture circular, slightly angulate above, peristome double, the outer, viewed from above, rather expanded, columellar margin rounded.

"Major diam. 4.2; alt axis 2 mm"

Hab. Diyung Valley, north of Asalu, N. Cachar (*Godwin-Austen*)

"This Diyung Valley species is a departure from *A. theobaldi* of the Khasi Hills in having the apex less high and conical, the suture more impressed, the shell more openly umbilicated, costulation next suture stronger." (*Godwin-Austen*)

408. *Alyceus toruputuensis*, *Godwin-Austen*.

Alyceus theobaldi, var., *Godwin-Austen*, J. A. S. B. xlv, part 2, 1876, p. 175, pl. 7, fig. 10 (operculum), Nevill, Hand List, i, 1878, p 290, no. 4

Alyceus toruputuensis, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p 359, pl 149, figs 3, 3a, 3b, p 351, pl 145, fig. 10 (operculum)

Original description —"Is of the same form as *A. theobaldi* from Cherra Poonjee and the Garo Hills, only that while the operculum in the latter is exceedingly closely wound, quite smooth in front, and black (and I have examined some dozens of shells), in the former the concentric whorls are wider apart, have a central circular hollow space, and are white. The ribbing of the swollen portion in the Dafia shell is exceedingly fine, and thus, I note, is a common character, holding good almost without exception, of all the species in the Dafia Hills" (*Godwin-Austen*, 1876.)

"There is also a striking difference in the contraction of the whorl near the umbilicus" (*Godwin-Austen*, 1914.)

Hab. India: slopes of Toruputu Peak, Dafia Hills (*Godwin-Austen*).

409 *Alycæus woodthorpei*, Godwin-Austen.

Alycæus woodthorpei, Godwin-Austen, Land & Freshw. Moll. India, II, 1914, p 414, pl 165, fig 14

Original description — "Shell openly umbilicated, globosely conoid, sculpture: oblique, sinuate costulation on upper whorls, rather strong and distant as it approaches the end of the sutural tube, it then becomes very fine and very close up to the constriction; colour pale sienna-brown; spire moderately high, apex small, suture well impressed, whorls 4, the constriction near the base of the sutural tube, thus enlarging into a narrow costulated ridge which is close behind the peristome, aperture oval, obtusely angulate above, peristome simple, double, thick, columellar margin curving vertically.

"Major diam 4.3, alt. axis 2 mm."

Hab. Burma Fort Stedman (*Woodthorpe*).

"The most distinguishing character of this shell is the extremely fine close regular costulation next the sutural tube, which, in most species of the genus, is strong and well defined, this character is met with again in species of the Abor Hills, such as *A. aborensis*, etc. Thus in conjunction with the fact that so large a proportion of the species in other genera inhabiting the Abor country are not found in Western Assam, is an indication of topographical connection between the Shan area and the Tsanspu drainage-system far back in geological time, closer, more direct, and unrestricted than now exists. There are grounds for thinking that the high snowy range at the head of the Irrawaddy, together with the well defined orographical feature the Assam Range to the west, may be a comparatively recent elevation compared to the main mass of the Eastern Himalayas" (*Godwin-Austen*.)

Subgenus *CYCLORYX*, Godwin-Austen.

Cycloryx, Godwin-Austen, Land & Freshw Moll India, II, 1914, p 334

Type, *Alycæus constrictus*, Benson.

Range India

"Shell perforate, ovately conoid, sculpture generally consisting of distant, fine, regular costulation on the upper whorls, stronger and closer on the short inflated portion of the last. Suture tube extremely short, or as often clubbed or pear-shaped."

410. *Alycæus bembex*, Benson

Alycæus bembex, Benson, A. M. N. H. ser 3, iii, 1859, p 178, Blanford, A. M. N. H. ser 3, viii, 1864, p 458, Pfeiffer, Mon. Pneum. Alycaeus (Cyclorhynchus) bember, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p 346, pl 147, figs. 1, 1 a

Original description:—"Testa umbilicata, ovato-conica, lævigata, hic illic striatula, strus ventriculi confertis, ad umbilicum striatula, hyalina?; spira elevato-conica, sutura profunda, apice acutiusculo; anfractibus 5, valde convexis, ultimo compresso-rotundato, pone stricturam modice tumido, tubulum suturale in brevissimum gerente, pone aperturam rursus tumidulo, apertura obliqua, sub-circulari, peristomate simplici, tenui, undulato, expansiusculo, subreflexo, superne leviter emarginato. Operc. —?"

"Diam. major 4, minor 3, axis 4, long. 5 mill."

Hab. India. Bungen Valley, Darjeeling (*Stoliczka, Mainwaring, Blanford*), Damsang, Daling District (*Godwin-Austen*).

"This is one of the most elevated in the spire among the known Himalayan *Alycae*. The specimens sent are all weathered, but present no evidence of any considerable sculpture or colouring. The very short sutural tube is a character shared by *otrophorus* and *constrictus*; and altogether the shell is deficient in prominent features, although perfectly distinct from any of its allies, especially in its aperture (sinuous, and at its upper angle emarginate), its wider umbilicus, plainer sculpture, and more compressed whorls" (*Benson*.)

411. *Alycaeus burraillensis*, *Godwin-Austen*.

Alycaeus (Cyclorhynchus) burraillensis, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p 408, pl. 147, figs 6, 6 a

Original description:—"Shell perforation hidden, shell conoid, sculpture very close, fine, and regular costulation, apex smooth, distant fine costulation between sutural tube and aperture; colour whitish, but often bright pale sienna, darker on the apex, spire high, conical, apex blunt, suture very impressed, whorls 4, strongly rounded, aperture circular, peristome double, slightly expanded on the outer margin, a slight flange covering the perforation; operculum pale ochraceous, multispiral, smooth, slightly concave.

"Major diam. 2.8; alt. axis 1.8 mm."

Hab. India. Japvo Peak, Naga Hills, 9890 ft. Mumpur side of the Burraill Range, and Angaolua Peak (*Godwin-Austen*).

"Close to *A. (Cyclorhynchus) mangutensis* of the Jaintia Hills, but differs in form of the spire, which is much broader and blunter than in that species. This species is about the same size as *A. granum*, from Margarita at foot of the Eastern Naga Hills, found there by the late Mr W. Doherty, is of more depressed form, it is much more openly umbilicate, and the close costulation coarser than in *granum*." (*Godwin-Austen*.)

412. *Alycaeus burroiensis*, Godwin-Austen.

Alycaeus burroiensis, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p 354, pl 141, figs. 6, 6a.

Original description —“Shell globosely conical, umbilication narrow, sculpture next sutural tube, fine close costulation, stronger and distant on rest of the whorls, not defined on the apical, colour bleached, spire low; suture impressed, the tube short, whorls 4, the last between sutural tube and aperture crossed by two ridges, the anterior being small and indistinct, aperture quadrate, oblique; peristome double, narrow, roundly angulate on outer margin, canaliculate below, columellar margin nearly vertical

“Major diam 2.6; alt. axis 1.75 mm” (*Godwin-Austen*.)

Hab India Burroi Gorge, Datta Hills (*Godwin-Austen*.)

A globose form with a curious angulate aperture.

413. *Alycaeus constrictus*, Benson.

Cyclostoma constrictum, Benson, A. M. N. H. ser 2, viii, 1851, p 188, x, 1852, p 272, Pfeiffer, Conch.-Cab., Cyclostomaceen, 1854, p 379, pl 49, figs 24, 25

Original description :—“Testa perforata, ovato-conica, glabra, costis angustis distantibus munita, translucente, albida vel rufula, spira elongato-conica, apice obtuso, sutura valde impressa; anfractibus 4 rotundatis, superioribus glabris, sequentibus remote costulatis, ultimo mox confertissime costulato-striata, pone aperturam strangulato, anticeque late constricto, apertura circulari, verticali, $\frac{3}{8}$ longitudinis æquante, peristomate undique reflexo, operculo testaceo, multispirato, sutura inconspicua.

“Diam 2, alt 3½ mill”

Hab Sikkim: Darjeeling (*Stoliczka, Mainwaring*)

“This shell has apparently an affinity with the Philippine *O. minus* of Sowerby, but differs in its more tapering form, smaller size, perforation, diverse sculpture, and in the strangulation of the last whorl behind the aperture, in which feature it exhibits an

approach to the more shortened *C. gibbum*, Fér., from Turon in Cochin China, and to the depressed *C. strangulatum*, Hutton, so abundant in the more western portion of the Himalayas." (Benson.)

Benson in 1859 described a var. *minor*, but Lieut.-Col. Godwin-Austen has shown* that the species varies considerably in size, and he concludes that "there is no reason why a variety should be constituted," a view in which I entirely concur.

414. *Alycæus costatus*, Godwin-Austen

Alycæus graphicus var., Godwin-Austen, J A S B xlv, part 2, 1876, p. 178 (part).

Alycæus (*Cyclorhynchus*) *costatus*, Godwin-Austen, Land & Freshw Moll. India, ii, 1914, p. 360, pl. 154, figs 2, 2 a

Original description — "Shell narrowly perforate, elongately conical, sculpture distant, well-raised costulation, continuous up to the aperture, about 7 costæ anterior to the short sutural tube, colour stony white, apex yellowy pink fading to ochraceous, spire high, sides flat, apex rather pointed; suture impressed, whorls 4, well rounded; aperture circular, vertical; peristome double, reflected.

"Major diam. 2.75; alt. axis 2 mm."

Hab. India: Dikrang Valley, Dafia Hills (Godwin-Austen).

".. It is a close ally of *A. (Cyclorhynchus) paucicostatus*, but is more elongate, spire not so pyramidal, and it is a smaller shell. It approaches specimens... received from the Indian Museum, Calcutta, as *constrictus*, var., but I consider them true *constrictus*... This Dafia shell is of a different, more elongate shape, although the umbilical region is similar and perforate." (Godwin-Austen.)

415. *Alycæus difficilis*, Godwin-Austen

Alycæus (*Cyclorhynchus*) *difficilis*, Godwin-Austen, Land & Freshw Moll. India, ii, 1914, p. 415, pl. 155, figs 2, 2 a.

Original description — "Shell ovately globose, perforation hidden, sculpture distant well-marked costulation on the upper whorls, much finer next the sutural tube and a little closer, no costulation in front of it; colour white, neither specimen very fresh, spire moderately high; suture impressed, the tube very short and small; whorls 4, well rounded, the last slightly swollen in front of the sutural tube; aperture circular, peristome double, inner circular, continuous, the outer with a strong flange-like expansion on columellar margin, expanded and reflected on outer and upper margin.

"Major diam. 3.2, alt. axis 2.4 mm."

Hab. Burma: Shan Hills (Fadden)

"There is considerable similarity in this species with that of *A. thompsoni*, of Manipur, particularly in shape, but the Shan

* Land and Freshw Moll. India, ii, 1914, p. 348

Hills form is more compactly globose, and the costulation twice as strong, the reflection of the outer lip on the columellar side is not quite similar, and the costulation next sutural tube is altogether different." (*Godwin-Austen*.)

416. *Alycæus elegans*, *Godwin-Austen*

Alycæus (Cyclorhynchus) elegans, *Godwin-Austen*, *Land & Freshw. Moll. India*, II, 1914, p. 361, pl. 147, fig. 9

Original description.—"Shell elongately turbinate, perforate, sculpture very fine, close regular costulation; colour whitish with a burnt sienna tint; spire high, apex blunt, suture impressed, whorls $4\frac{1}{2}$, sides very convex; aperture circular; peristome double, not thickened, with a flange hiding the umbilicus

"Major diam. 2.6; alt. axis 2 mm." (*Godwin-Austen*)

Hab. India. Shengorh Peak, Dafia Hills (*Godwin-Austen*)

417. *Alycæus generosus*, *Godwin-Austen*

Alycæus generosus, *Godwin-Austen*, *Land & Freshw. Moll. India*, II, 1914, p. 374, pl. 138, figs. 8, 8a, 8b

Original description.—"Shell tumidly turbinate, umbilicus narrow, much hidden by last whorl; sculpture only some 10 close costæ next the short suture, the rest of the shell smooth; colour pale ochraceous; spire conic, moderately high, sides flat; suture impressed, tube short; whorls 4, constriction close to sutural tube, at once followed by a ridge which slopes diagonally to the aperture, surface slightly irregular, aperture is nearly circular, subangulate at upper outer margin; peristome double, simple; columellar margin well rounded.

"Major diam. 3, alt. axis 1.4 mm."

Hab. India. Khasi Hills (*Godwin-Austen*)

"I regret that I did not record the exact locality of this shell in the Khasi Hills, as it is a very distinct species." (*Godwin-Austen*)

418. *Alycæus granum*, *Godwin-Austen*.

Alycæus granum, *Godwin-Austen*, *Proc. Zool. Soc.* 1893, p. 593

Alycæus (Ducula) granum, *Godwin-Austen*, *Land & Freshw. Moll. India*, II, 1897, p. 4, pl. 63, fig. 6, tom. cit. 1914, p. 364.

Alycæus (Orthalicæus) granum, *Kobelt & Mollendorff*, *Nachr. Deutsch. Malak. Ges.* xxix, 1897, p. 150, id., *Cat. Pneum.* 1899, p. 46

Alycæus (Alycæus) granum, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p. 345

Alycæus (Cyclorhynchus) granum, *Godwin-Austen*, *Rec. Ind. Mus.* VII, 1915, p. 503

Original description.—"Shell perforate, globose; sculpture fine regular ribbing, closely arranged and extending to the peristome, colour ruddy ochre; spire subconical, suture well impressed,

whorls 4, rounded, a slight constriction in front of the short sutural tube; aperture suboblique, circular, peristome double, the outer reflected slightly.

"Major diam. 2.25; alt. axis 2 mm"

Hab. India: Margarita, foot of Eastern Naga Hills (*Doherty*)

"This species is only half the size of its nearest ally, a variety of *A. otuphorus* from the wooded slopes of the North Jaintia Hills. This variety was figured and described by me in the J. A. S. B. 1871 (p. 93, pl. v. fig. 6). From Mr. Aldrich I have received three specimens of it, all fully grown, and as it is so much smaller than the typical *A. otuphorus* from Sikkim (which is as much as 4.25 mm. in maj. diam.), I consider it necessary to give it a distinct title. It is also more depressed and has fewer whorls, and the umbilical area is more open than in the Darjiling form." (*Godwin-Austen*.)

419. *Alycaeus graphiarius*, *Godwin-Austen*.

Alycaeus graphicus var., Theobald, J. A. S. B. xxxi, 1862, p. 137, id., op. cit. xxxix, part 2, 1870 p. 398, pl. 18, figs. 3a, 3b, Hanley & Theobald, Conch. Ind. 1874, p. 39, pl. 95, fig. 7.

Alycaeus (Cyclorhynchus) graphiarius, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 416, pl. 147, figs. 7, 7a

Original description — "Besides the typical form described by Mr. Blanford from Arracan and Pegu, an interesting variety also occurs in the Shan States for the identification of which I am indebted to Mr. Blanford. It differs from the type by a shorter, more subtile and subglobose shape, and by the ribs on the whorls being slightly more distant from each other and very sharp. There are also some of the stronger ribs traceable even on the constriction near the aperture. The shell is pure white with the apex and the adjoining whorl beautifully pale yellow. I have given an illustration of this variety in order to facilitate comparison." (*Theobald*.)

Hab. Burma Shan States (*Theobald*).

"The distant strong costulation is very striking, with 4 very distinct ribs behind the aperture." (*Godwin-Austen*)

420. *Alycaeus graphicus*, *Blanford*

Original description — "Testa perforata, ovato-globosa, tenuis, palide fulva, costulis filaribus subremotis sinuatis ornata. Spira

ovato-conoidea, lateribus convexis, apice obtusula, sutura impressa Anfr 4, rotundati, 2 primi lente, penultimus et ultimus celerius accrescentes, ultimus ad latus vix tumidus, pone structuram spatio brevissimo confectius costulatus, tubulum suturale brevissimum generis Spatium constrictum læve, costula filiformi una medio plerumque signatum, prope aperturam tumidius Apertura vix obliqua, majuscula, circularis, peristoma duplex, interno breviter porrecto, continuo, externo expanso, retro relicto, ad umbilicum reflexo, perforationem partim celante

"Diam maj. 3, mm $2\frac{1}{2}$, alt. 3, apert. diam. $1\frac{1}{2}$ mm."

Hab Burma. Arakan Hills, Pegu; Moditoung (*Blanford*) India North Cachar and Naga Hills (*Godwin-Austen, Chennell*); var Burroi Gorge, Daffa Hills (*Godwin-Austen*).

"A Burmese representative of the little Darjiling group of *Alyceus*, which comprises *A. constrictus*, B, *A. bembex*, B., and *A. otiphorus*, B. *A. graphicus*, although much more globose than any of the others, is in some respects intermediate between *constrictus* and *otiphorus*, resembling the first in size and somewhat in form, and the latter in the reflexed left edge of the outer peristome This character, however, is by no means so much developed in the Burmese as in the Darjiling species The present has a more marked sculpture than either of its three allies and differs from them also in the very slight approximation of the costulation behind the constriction. Almost all the species of the genus *Alyceus* are more closely and strongly marked upon the tumid portion of the last whorl than on any other part of the shell, the length of the closer ribbing and of the tumidity having a general relation to that of the sutural tube" (*Blanford* d.)

Var. *dihingensis*, *Godwin-Austen*

Alyceus (*Cyclorhynchus*) *graphicus*, var *dihingensis*, *Godwin-Austen*, Land & Freshw. Moll India, II, 1914, pp 363, 404, pl 146, figs 6, 6a

Original description — "Shell · umbilicus covered by expansion of outer lip, tumidly conical, sculpture above somewhat distant regular costulation, there are 4 costæ next the sutural tube, 3 distant well developed behind the aperture, in another specimen two only, colour very pale ochraceous; spire high, apex fine; suture impressed, the tube short and oblong, whorls 4, well rounded, aperture circular, subvertical; peristome expanded and slightly reflected, double.

"Major diam 3.75; alt. axis 3 mm" (*Godwin-Austen*)

Hab. India. Assam (*Ogle*), Angaoluo Peak, Naga Hills

Var. *variabilis*, *Godwin-Austen*.

Alyceus (*Cyclorhynchus*) *graphicus*, var *variabilis*, *Godwin-Austen*, Land & Freshw Moll India, II, 1914, p. 403, pl. 146, fig 4

Original description — "This is another variety of *graphicus*. The costulation on the upper whorls is strong and rather distant,

much closer and much stronger next the ovate sutural tube, about six to seven costæ between the tube and peristome, there are from two to three well-marked costæ on the very slightly swollen part of the whorl" (*Godwin-Austen*)

Hab. India - Lhota-Naga and Pikuu Hills.

421 *Alycæus khunhoensis*, *Godwin-Austen*

Alycæus (*Diorys*) *graphicus*, var. *minor*, *Godwin-Austen*, J. A. S. B. xlii, part 2, 1874, p. 149, pl. 8, figs 8, 8a

Alycæus (*Cyclorv*) *khunhoensis*, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p. 403, pl. 147, fig 8, pl. 144, figs 9, 9a.

Original description — "Shell elongately conoid, rimate, thin, transparent. sculpture closely and similarly costulated throughout, no closer near the sutural tube, very unusual in the genus, apex smooth; colour pale pinkish, ochraceous on apical whorls, spire high, sides flat, suture impressed, whorls 4, very rounded, constriction close to sutural tube, flat and smooth thence to the aperture, aperture nearly circular, vertical, peristome simple, reflected, columellar margin rounded

"Major diam. 1.9, alt. axis 1.3 mm." (*Godwin-Austen*.)

Hab. India - Khunho Peak, Naga Hills (*Godwin-Austen*)

422. *Alycæus mangutensis*, *Godwin-Austen*.

Alycæus otiphoides var., *Godwin-Austen*, J. A. S. B. xl, part 2, 1871, p. 93, pl. 5, fig. 6

Alycæus (*Diorys*) *gramm*, var. *major*, *Godwin-Austen*, Proc. Zool. Soc. 1893, p. 594

Alycæus (*Cyclorv*) *mangutensis*, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p. 377, pl. 146, figs 5, 5a.

Original description — "Shell globosely turbinate, perforation hidden by outer lip, sculpture smooth on the two apical whorls, succeeded by close, fine costulation, 5, rather close, on the short sutural tube, colour pale ochraceous, some richer, some colourless, spire moderately high, conic; apex blunt, suture impressed, whorls tumid, 4; aperture circular, nearly vertical; peristome double, not thickened, columellar margin an arc of a circle, operculum dark coloured.

"Major diam. 3.2; alt. axis 2.2 mm"

Hab. India. Mangut Valley, Jaintia Hills; Jawai (*Godwin-Austen*)

"With wider knowledge of these small shells, and a large series for comparison, I consider this species worthy of a specific distinction" (*Godwin-Austen*.)

423. *Alycæus multicostatus*, *Godwin-Austen*.

Alycæus (*Cyclorv*) *multicostatus*, *Godwin-Austen*, Land & Freshw. Moll. India, ii, 1914, p. 404, pl. 147, fig. 7.

Original description:—"Shell globosely turbinate, narrowly umbilicate, sculpture: very close, regular costulation, disappearing on the two apical whorls, colour white, with an ochraceous tint; spire high, pyramidal, apex rather fine; suture strongly impressed,

whorls 5, rounded on sides, swollen; aperture circular; peristome double, both thin, columellar margin nearly vertical.

"Major diam. 3.25, alt. axis 2.25 mm."

Hab Burma head of the Lanier River, Lahupa Naga Hills, N E Manipur.

"Comparing this with *A. granum*, it has for its size much closer costulation. It is more narrowly umbilicate than *A. burraileensis*, which is a much smaller shell." (Godwin-Austen)

424 *Alycæus otiphorus*, Benson

Alycæus otiphorus (Benson), Theobald, J. A. S. B. xxvii, 1858, p. 322 (nom. nud.), Benson, A. M. N. H. ser. 3, iii, 1859, p. 178, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 46, id., Novit. Conch. ser. 1, iv, 1871, p. 18, pl. 112, figs. 28-31, Hanley & Theobald, Conch. Ind. 1874, pl. 95, figs. 5, 6, Theobald, Cat. Shells Brit. India, 1876, p. 40, Sowerby, in Reeve, Conch. Icon. xx, 1877, *Alycæus*, pl. 4, fig. 30, Nevill, Hand. List, i, 1878, p. 292.

Alycæus (Alycæus) otiphorus, Benson, A. M. N. H. ser. 3, iii, 1859, p. 176, Kobelt, Das Tierreich, Lief. 16, 1902, p. 347.

Alycæus (Orthalycæus) otiphorus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 150, id., Cat. Pneum. 1899, p. 46.

Alycæus (Cyclorhiza) otiphorus, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 349, pl. 147, figs. 2, 2a, 2b.

Original description.—"Testa perforata, ovato-globosa, minutissime confertim striata, cinereo-cornea, spira conica, apice obtusiusculo, rutilo, sutura valde impressa; anfractibus 4 convexis, ultimo ventricoso, ab apertura subremote constricto, tum pone labrum tumidiusculo, lævigato, tubulum brevissimum suturalem gerente, apertura vix obliqua, peristomate duplici, interno continuo, expanso, interdum breviter porrecto, externo dilatato, reflexo, ad umbilicum processu auriculari brevi, subito reflexo, perforationem subtegente munito. Operculum normale, concaviusculo, planato.

"Long. $4\frac{1}{2}$, diam. obliq. 4 mill."

Hab India. Pankabari, 1000 ft., Rungun Valley, 4000 ft., near Duijeeling (*Stolozzka, Blanford, Mammaring, Theobald*).

"This shell, which seems to be not uncommon on the west side of the Rungun Valley, as well as at a lower elevation in the Sikkim ranges, was forwarded to me by Mr. Blanford in 1857. In form it approaches *A. amphora* and *constrictus*, and, like the latter, which belongs to the same type in the mode of constriction, it is remarkable for the shortness of the sutural tube, but is at once distinguished by the process of the peristome at the umbilicus" (*Benson*).

425. *Alycæus paucicostatus*, Godwin-Austen.

Alycæus (Dioryx) graphicus var., Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 178 (part).

Alycæus paucicostatus, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 360, pl. 147, figs. 5, 5a.

Alycæus (Cyclorhiza) paucicostatus, id., op. cit. pp. 351, 360.

Original description.—"Shell narrowly perforate, globosely

conical, transparent; sculpture close, well-marked, regular costulation, 3 strong costæ behind aperture, one close to it inconspicuous; colour rich pale ochraceous, spire moderately high, suture impressed, 5 costæ on sutural tube, whorls 4, well rounded, constricted close to the club-like tube, aperture circular, nearly vertical; peristome closely double, reflected, operculum ochre in colour, smooth with central depression, evenly spiral

"Major diam 3.1; alt axis 2.3 mm"

Hab India: Toruputu Peak, Daffa Hills (Godwin-Austen).

"The species is much smaller than a closely allied one from same area." (Godwin-Austen.)

426. *Alycaeus spratti*, Godwin-Austen

Alycaeus spratti, Godwin-Austen, Proc Zool Soc 1888, p 245

Alycaeus (*Chamaelycaeus*) *spratti*, Kobelt & Mollendoiff, Nachr.

Deuts Malak Ges xix, 1897, p. 152, id, Cat Pneum. 1899,

p 48, Kobelt, Das Tierreich, Lief 16, 1902, p 303.

Alycaeus (*Cyclorhynchus*) *spratti*, Godwin-Austen, Land & Freshw

Moll India, ii, 1914, p 417, pl 151, figs 10, 10 a.

Original description:—"Shell pyramidal, closely umbilicated, sculpture very fine close costulation, more distant between the sutural tube and the peristome; colour white, with pale lemon tinge, or hoary; spire high, rapidly decreasing to apex, which is rather pointed; suture well impressed; whorls $5\frac{1}{2}$, convex, the last swollen, slightly constricted at the sutural tube, which is very short and thick, less than one millim in length, the whorl swells again to the aperture, this is circular, oblique, peristome double, slightly reflected, operculum not seen"

Hab Burma. Pingoun, Shan Hills, 2500 ft (*Spratti*).

"This species is quite new; it might be at first mistaken for a small variety of *A. pyramidalis*, Bs, from the Tenasserim Valley, but the sutural tube is in that species very thread-like and nearly 3 millim in length, the aperture is also very different in form, and not so simple and circular." (Godwin-Austen, 1888)

"With the very different pyramidal form of shell as compared with *A. constrictus*, etc, the presence of the short club-like sutural tube puts this species in the section *Cyclorhynchus*. On the other hand, in the shell-character combined with type of sculpture, it is like species in the neighbouring country to the east and south, *A. pyramidalis* and *A. gibbus*." (Godwin-Austen, 1914)

427 *Alycaeus summus*, Godwin-Austen

Alycaeus (*Cyclorhynchus*) *summus*, Godwin-Austen, Land & Freshw

Moll India, ii, 1914, p. 349, pl 147, figs 3, 3 a.

Original description—"Shell globosely conoid, perforation quite hidden, sculpture fine and rather close costulation, 7 to 8 very fine adjacent to the sutural tube, which is short and pointed, not knob-like, colour pale with an ochraceous tint; spire high, conic,

apex blunt, suture impressed, whorls $4\frac{1}{2}$, the constriction slight, nearly straight up to the reflected peristome and slightly rising; aperture circular, peristome simple, strong, double, outer well reflected, operculum smooth, pale horny.

"Major diam. 2.9, alt axis 2.9 mm"

Hab India Rechila Peak, Western Bhutan (*Robert*).

"This is quite distinct from *A. bembex*, which I at first thought it to be, but the umbilical region differs much." (*Godwin-Austen*)

428. *Alycæus tenellus*, *Godwin-Austen*.

Alycæus (*Cyclorhynchus*) *tenellus*, Godwin-Austen, Land & Freshw Moll India, 11, 1914, p. 417, pl. 155, figs 3, 4, 4 a

Original description:—"Shell scarcely perforate, elongately conoid, sculpture: none visible on upper whorls, very fine and indistinct near the very short sutural tube, colour bleached, spire high, apex small; suture impressed, whorls $4\frac{1}{2}$, sides rounded, nearly flat on side, constriction slight close up to the sutural tube, thence short and flat to the aperture, aperture circular, vertical; peristome double, the inner well reflected below, slightly flattened on the upper outer margin

"Major diam. 2.9; alt. axis 2.4 mm" (*Godwin-Austen*)

Hab. Burma Shan States (*Fedden*)

429. *Alycæus thompsoni*, *Godwin-Austen*.

Alycæus (*Cyclorhynchus*) *thompsoni*, Godwin-Austen, Land & Freshw. Moll. India, 11, 1914, p. 404, pl. 146, figs 3, 3 a.

Original description—"Shell ovately globose, umbilicus concealed; sculpture fine, regular, close costulations, six on the length of the sutural tube, about seven between it and the peristome indistinct; colour whitish, spire rather high, apex rather blunt; suture moderately impressed; whorls $4\frac{1}{2}$, sides convex, aperture circular, with a flange close to the umbilicus and completely covering it, peristome double, thickened, continuous.

"Major diam. 3.8, alt axis 2.5 mm." (*Godwin-Austen*.)

Hab. Burma: Munnipur (*Godwin-Austen*).

Subgenus **RAPTOMPHALUS**, *Godwin-Austen*.

Raptomphalus, Godwin-Austen, Land & Freshw. Moll India, 11, 1914, p. 366.

TYPE (first species), *Alycæus magnificus*, Godwin-Austen

Range. India, Burma.

"Shell globosely conoid, widely umbilicated. The margin of the umbilicus is a well-developed keel, which commences near the constriction. The peristome is strongly and irregularly crenulated, showing well behind the aperture viewed from the side, between this and the sharp constriction a well raised ridge crosses the whorl transversely."

430. *Alycæus akhaensis*, Godwin-Austen.

Alycæus akhaensis, Godwin-Austen, Land & Freshw. Moll India, ii, 1914, p. 362, pl. 141, figs 1, 1 a, 1 b

Original description —“Shell globosely conical, openly umbilicated; sculpture very fine, close costulation, flattened as it were, the separation indicated by a fine line next the sutural tube, which is short, smooth on anterior part of the last whorl; strong distant costulation succeeds the fine, becoming finer and more indistinct towards the apex, colour umber-brown; spire rather high, apex blunt, suture impressed; whorls 4, well rounded, the last crossed by a ridge in front of the constriction, and by another, less conspicuous, intervening between it and the peristome; peristome double, thickened; columellar margin slightly sinuate, much sinuated on the outer margin, with four indistinct crenulations, one distinct on the lower margin.

“Major diam 3; alt. axis 1.5 mm” (*Godwin-Austen*)

Hab India Barowli Gorge, Durrang District, Assam, foot of Akha Hills

431. *Alycæus commutatus*, Godwin-Austen.

Alycæus commutatus, Godwin-Austen, Land & Freshw. Moll India, ii, 1914, p. 351, pl. 148, fig. 7.

Original description. —“Shell solid, globosely conoid, openly umbilicate; sculpture rather distant, fine costulation on the upper whorls, becoming much stronger at the sutural tube, quite strong at its base, colour dull white, spire moderately high, apex small; suture impressed, the sutural tube long and strongly formed; whorls 4, well rounded, aperture circular, subangulate above, with 3 sharp folds on the lower outer margin; peristome double, thickened, with columellar margin rounded subvertically, operculum white, shelly, multispiral.

“Major diam 4.8, alt. axis 2.5 mm.”

Hab. India: Bhutan.

“This shell Colonel Beddome had named *A. burtu*, but it is a far larger, more solid conical shell with the peristome differently crenulated, the operculum being similar.” (*Godwin-Austen*)

432. *Alycæus duoculmen*, Godwin-Austen.

Alycæus duoculmen, Godwin-Austen, Land & Freshw. Moll India, ii, 1914, p. 365, pl. 157, figs 2, 2 a.

Original description —“Shell globosely conoid, somewhat depressed, openly umbilicated; sculpture fine indistinct, costulation on upper whorls showing near the suture apex smooth, very fine and close near sutural tube, colour whitish grey above, pale ochraceous on the swollen part of the whorl; spire depressedly conoid, apex small; suture impressed, sutural tube rather short, whorls 4, the last much swollen behind the sharp constriction,

in front the whorl is crossed by a well-raised ridge, a narrow furrow, and then another ridge, narrowing to a point below; aperture angularly and widely ovate, oblique, peristome double, much thickened, reflected, subangulate above near suture, rounded on the periphery of the whorl, then descending, with indistinct crenulation up to the subvertical columellar margin, which is thickened below; operculum black, placed too far in to see the spiral.

"Major diam. 4.75, alt. axis 2.25 mm."

Hab. India: Tsanspu Valley (*Oakes*)

"Only one specimen was found, but that a most perfect one, and very distinct from such double-ridged species as *birugosus*, *multirugosus*, etc., also in the angulate form of the aperture" (*Godwin-Austen.*)

433. *Alycæus kengtungensis*, *Godwin-Austen.*

Alycæus kengtungensis, Godwin-Austen, Land & Freshw. Moll. India, II, 1914, p. 409, pl. 139, figs 6, 6a

Original description — "Shell somewhat depressedly turbinate and umbilicated, sculpture fine and rather close costulation on the upper whorls, much stronger next the sutural tube, and near the base of this peculiarly distant costæ very strong, colour white, spire conoid, suture impressed, sutural tube long, whorls 4, the last swollen, next sutural tube sharply constricted, then suddenly expanding into a rounded ridge crossing the whorl crescentically and expanding gradually forwards to the peristome; aperture oblique, horizontally oval, subangular above, peristome double, simple

"Major diam. 5.25; alt. axis 2.4 mm" (*Godwin-Austen.*)

Hab. Burma Kengtung, Shan Frontier (*Woodthorpe*).

434. *Alycæus lahupaensis*, *Godwin-Austen.*

Alycæus lahupaensis, Godwin-Austen, Land & Freshw. Moll. India, II, 1914, p. 394, pl. 141, figs 3, 3a

Original description:—"Shell globosely turbinate, umbilicus fairly open. sculpture at the sutural tube is fairly strong, regular, close costulation, becoming gradually finer towards the apical whorls; colour whitish or very pale ochraceous; spire depressedly conoid; suture impressed, the sutural tube short, whorls 4½, well rounded, last crossed by a low ridge between the aperture and sutural tube; aperture ovate, angulated above, rounded below; peristome very solid, double, very slight crenulation visible on the outer margin but not inside the aperture, columellar margin nearly vertical, sinuate

"Major diam. 4, alt. axis 1.8 mm."

Hab. Burma. Gazaphimi, Lahupa-Naga Hills, Munnipur (*Godwin-Austen*)

"At a first glance, this shell might be taken for *G. khasiacus*, . . . the type of which is from the Garo boundary of the

Khasi Hills; but on placing the two side by side, there is considerable difference in its size, longer sutural tube, aperture not so circular and the peristome larger, so much more thickened" (*Godwin-Austen*)

435. *Alycæus luyorensis*, *Godwin-Austen*.

Alycæus luyorensis, *Godwin-Austen*, Land & Freshw. Moll. India, II, 1914, p. 365, pl. 157, figs 6, 6 a.

Original description — "Shell globosely turbinate, umbilicated; sculpture very fine close regular costulation next the suture, very fine on whorls above, hardly seen on apical, colour dull white above, pale ochraceous on the swollen portion of the last whorl, spire moderately high; suture moderately impressed, sutural tube moderately long; whorls $4\frac{1}{2}$, constriction short, no swelling between sutural tube and aperture; aperture circular, peristome double, very slightly reflected, openly and expandedly crenate; columellar margin curving vertically; operculum slightly concave in front, distantly spiral

"Major diam 6.8; alt. axis 4 mm."

Hab. India. Luvor, Abor Hills (*Oakes*)

"The form and sculpture distinguishes this shell from the other crenulated species obtained in the valley of the Tanspu." (*Godwin-Austen*)

436. *Alycæus magnificus*, *Godwin-Austen*.

Alycæus (Raptomphalus) magnificus, *Godwin-Austen*, Land & Freshw. Moll. India, II, 1914, p. 366, pl. 156, figs 1, 1 a, 1 b.

Original description — "Shell very openly umbilicated, bordered by a distinct keel, very globosely conoid; sculpture on the upper whorls, and as far as the end of the long sutural tube there is distant strong costulation, thence for the length of the tube it is extremely fine and close, colour white, shell old, spire moderately high, apex small, somewhat depressed, suture impressed; whorls $4\frac{1}{2}$, tumid, the constriction is sudden and close to the base of the sutural tube, it there expands considerably towards the aperture, commencing with a high ridge well raised, and this again by another broader and more rounded, which merges into the very broad expanded wavy peristome, aperture ovate, subangulate both above and below, peristome strongly crenulated, with five indentations.

"Major diam. 4.25, alt. axis 1.7 mm"

Hab. India. Yamne Valley, Abor Hills (*Oakes*).

"This is a very beautiful species. The sharp, well defined keel around the umbilicus is a character quite new to me in this genus, one which has led me to place it in a new subgenus. In the very fine costulation on the swollen portion of the last whorl it is similar to *A. aborensis*." (*Godwin-Austen*.)

437. *Alycaeus muspratti*, *Godwin-Austen*.

Alycaeus (*Orthalycaeus*) *muspratti* (nom. nud.), Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 150, id., Cat. Pneum. 1899, p. 46.

Alycaeus muspratti (Beddome MS.), Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 396, pl. 143, fig. 1.

Original description —“Shell depressedly conoid, openly umbilicated, sculpture smooth on first two whorls, then very strong, regular, somewhat close costulation, gradually more distant up to the end of the sutural tube where it suddenly becomes much finer, as far as the base of the tube, next which costæ are stronger, very fine striæ cross the inflated portion behind the peristome, colour stony white; spire low, apex blunt; suture impressed, the sutural tube long, whorls 4, somewhat flattened, last rounded and swollen next the sutural tube, then sharply constricted, and swelling into a well marked ridge, ending in a slight depression behind the lip. aperture irregularly oval horizontally; peristome viewed on side very thick, broad, expanded forward, sinuate, of many layers, in front crenulated, a strong notch at the sutural margin, 4 shallower on the outer and lower, columellar margin curving downwards; operculum burnt sienna, of many whorls, suture well seen.

“Major diam. 4.2; alt. axis 2 mm” (*Godwin-Austen*.)

Hab. India. Eastern Naga Hills (*Muspratt*).

438. *Alycaeus oakesi*, *Godwin-Austen*.

Alycaeus oakesi, Godwin-Austen, Land & Freshw. Moll. India, ii, 1914, p. 366, pl. 157, figs. 4, 4a.

Original description —“Shell very globosely conoid, somewhat depressed, openly umbilicate, with a strong tendency to a ridge bounding it; sculpture costulation distant, subdued on the apical whorls, strong and coarse near base of the sutural tube, but soon becoming finer, colour, all old and bleached shells; spire moderately high, apex small; suture impressed, whorls 4, much swollen next sutural tube, the last sharply constricted, enlarging suddenly into a high sharp ridge across the whorl, flattened in front and expanding to the aperture, which is nearly circular; peristome double, the inner lip thickened, the outer less so, the shell layers are seen overlapping each other when viewed from the left side.

“Major diam. 3; alt. axis 1 3/8 mm.” (*Godwin-Austen*.)

Hab. India. Chanjuk La, in Tsanpu Valley, 4300 ft., Lat. 29° 25', Long. 95° 20' (*Oakes*).

Subfamily DIPLOMMATINÆ.

Genus *NICIDA*, *Blanford*.

Nicida, Blanford, Journ. Conchyl. xvi, 1868, p. 332 (as subgenus of *Diplommatina*), id., J. A. S. B. xxvii, 1868, p. 82, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 87, Nevill, Hand. List, i, 1878, p. 288, Ancey, Bull. Soc. Malac. France, iv, 1887, p. 277 (genus).

Ges 1898, p. 130, id, Cat Pneum 1899, p. 50, Kobelt, Das
Tierreich, Lief. 16, 1902, p. 383

Original description —“Shell scarcely rimate, oblong, the apex
suddenly contracted, thin, whitish, shining; whorls 5, the
apical one small, obtuse, the second much larger, the three
lower all equal in breadth (giving the shell a very oblong form
all smooth except the last, which has a very minute transverse
striation, and is furnished with a basal keel; aperture circular
peristome double, externally expanded, and reflexed total length
 $1\frac{1}{4}$ inch [1.75 mm.].

“It is easily distinguished from all the other species by its very
oblong form.” (*Beddome*.)

Hab. India: banks of Peringoonda, Anamullays (*Beddome*).

Opisthostoma (*Opisthostoma*) *faubanki*, Kobelt, Das Tierreich, Lief. 16, 1902, p 413

Original description.—"Testa irregulariter ovata, albida, confertum costulata, lineis impressis apicalibus minutis, vix sub lente conspicuis, sæpe obsoletis, inter costulis signata. Spira breviter subcylindrica, apice perobtusio, sutura profunda. Antr 5, rotundati, duo apicales parum exserti, ex axi deviantes, tertius multo major, quartus maximus, quintus brevissime constrictus, ad stricturam angulo acuto versus umbilicum deflexus, in figuram literæ S curvatus, umbilicum omnino tegens, denique sinistrorsum ascendens, anfractus penultimus undique junctus. Apertura postica verticalis, subtrigonal-rotundata, peristoma simplex, undique expansum. Operculum normale

"Diam. incl peristom. 1.5 mm, perist non incl. 1 mm, alt. 1.5 mm. . aperture diam circa 0.5 mm."

Hab. India Khandalla, Western Ghats.

"The animal was very difficult to observe, on account of its extreme shyness and minute size. Only a very small portion of the body was extruded from the shell. The foot is very short and apparently rounded, but could not be seen fairly, as the animal would not crawl up a glass but appeared to endeavour to hide itself amongst decayed leaves. The tentacles are short and blunt, the eyes at their outside base, rather high in position, but not nearly so much as in the *Aciculacæ*. The whole animal is white and translucent, the eyes appearing as black specks, perfectly sessile. After two or three failures I succeeded in examining an operculum by breaking back the whorls of a specimen carefully until I came to it. It is lodged at the constriction in the last whorl, as long since suggested by Mr. Benson, and is distinctly horny, concentric, and paucispiral, resembling the figure of the operculum of *Diplommatina foliiculus* given in Adams's 'Gen Rec. Moll.' This entirely confirms the views I long since expressed as to the close affinity of *Opisthostoma* to *Diplommatina*, and shows the former, moreover, to be nearer to the typical costulate *Diplommatinæ* of the Himalaya than to the smooth or spirally lirate species (*Arenia*, H. & A. Ad.) of Hindustan, as the latter have the spiral structure apparently obsolete. .

"The characters which serve to distinguish *Opisthostoma fairbanki* from *O. nilgircum* are —

1. The greater eversion and smaller excentric deflection of the two apical whorls of *O. fairbanki*

2. The simple expanded peristome and subtrigonally rounded aperture—*O. nilgircum* having a non-expanding duplicate peristome, the outer portion retro-relict, and a circular aperture.

3. The more distant sculpture

4. The manner of curvature of the last whorl, the posterior bend of which is much more acute in the present species. In *O. nilgircum* the posterior half of the sigmoid curve of the last whorl is more open than the semicircular curve nearer the aperture, the umbilicus being fully exposed within the former. In *O. fairbanki* the anterior curve is the more open, and the last whorl just in front of the posterior half of the curve passes across and completely conceals the umbilicus

"I have with some difficulty, detected in *O. fairbanki* the minute decussating striæ observed by my brother between the costulations in *O. nilgircum*. They are very difficult to see, even under a high power and strong light, and appear to be frequently obsolete. I cannot detect them in my specimen of *O. nilgircum*, which is in good order.

"The bluntly trigonal form of the aperture in *O. fairbanki* does not appear to be quite constant, the mouth in some specimens is nearly round" (*Blanford*)

456. *Opisthostoma macrostoma*, *Blanford*

Opisthostoma macrostoma (Beddome MS.), *Blanford*, J. A. S. B. xxxviii, 1869, p. 139, pl. 16, fig. 7, *Hauley & Theobald*, *Conch. Ind.* 1875, pl. 117, fig. 9, *Pfeiffer*, *Mon. Pneum. Opisthostoma (*Opisthostoma*) *macrostoma*, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p. 413

Original description.—"Testa perforata, conoideo-ovata, albida vel pallide rubella, subdistanter oblique filiformi-costulata, sub lente spiraliter minutissime et confertissime strata. Spira elevato-conoidea, lateribus convexis, apice acutiusculo. sutura valde impressa. Anfr. $5\frac{1}{2}$, convexi, apicales normales non diviantes, penultimus vix major, ultimus confertius costulatus, brevissime constrictus, antice sigmoideo-deflexus. Umbilicus ab anfractu ultimo non-occultus. Apertura retrorsa sub-rotunda, fere verticalis, peristoma brevissime ad anfractus duos, penultimum et ante-penultimum, adnatum, duplex, internum continuum expansiusculum, externum, expansum breviter interruptum

"Long. 3, diam major 3, min. 2 millim. Ap diam. cum perist. $1\frac{1}{2}$ millim."

Hab. India · Bramagiri Hills, Wynnad (*Beddome*)

"Shell perforated, conoidly ovate, white or pale reddish in colour, with sub-distant oblique filiform costulation, which becomes closer on the last whorl beneath a microscope there is very fine close spiral striation, very difficult to detect in general, as in other species of *Opisthostoma* and many *Diplommatinæ*. Spire elongately conoid with convex sides, the apex rather acute, suture deep. Whorls $5\frac{1}{2}$, convex, the apical ones not excentric as in the other Indian species, the penultimate whorl very little larger than those above it. The last whorl is constricted as usual. In front of the constriction it is deflected inwards, but less sharply so than in *O. fairbanki*, and it does not conceal the umbilicus, the curve being more as in *O. nilgircum*. Aperture reversed, nearly circular, almost vertical, having scarcely any inclination upwards. Peristome attached for a short distance only, touching both the penultimate and ante-penultimate whorls, double, both portions expanded, the outer more broadly reflexed, and interrupted for a short distance where attached, inner peristome continuous.

"This is the largest form of the genus yet met with, exceeding even the Labuan species *O. crespigni*, H. Ad. It is much more pupa-shaped than that kind is, but much less so than the two previously described Indian forms, from both of which it may be easily distinguished—by the apical whorls not being excentric, as well as by its much greater size." (*Blanford*)

Opisthostoma (*Euopisthostoma*) *nilgircum*, Kobelt & Mollendorff,

Nachr Deuts Malak. Ges xxx, 1898, p 134, id., Cat Pnem

1899, p. 54

Opisthostoma (*Opisthostoma*) *nilgircum*, Kobelt, Das Tierreich,

Lief 16, 1902, p 414

Original description — "Testa minima, truncata pupiformis, anguste umbilicata, spira irregulari, apice obtusa, obliqua, sutura profunda, costulata, interspatius minutissime decussatis, albida, translucens. Anfractus rotundatus, 5, quorum duo primi obliquiter contorti, ultimus constrictus, deinde inflatus, refractus, ascendens, denique sinistorsus, anfractum penultimum contingens. Apertura subobliqua, superne versata, orbicularis. Peristoma continuum, incrassatum, duplicatum.

"Diam maj. 1.3 mm ; alt. 1.1 mm."

Hab. India: Pykara, Nilgiris (*U. F. Blanford, W. T. Blanford*)

"Of this remarkable little shell the first and only known specimens were found by one of us rather more than two years since in the dead leaves of the little thickets termed 'sholas' near Pykara on the Nilgiris." (*Blanford*.)

Genus *DIPLOMMATINA*, *Benson*

Diplommatina, Benson, A. M. N. H. ser. 2, iv, 1849, p. 193, Gray, Nomencl. Moll. Brit. Mus. 1, 1850, p. 54, Pfeiffer, Zeits. Malak. viii, 1851, p. 147, id., Mon. Pneum. 1852, p. 121, Adams, Gen. Rec. Ges. xx, 1898, p. 135, id., Cat. Pneum. 1899, p. 55, Kobelt, Das Tierreich, Lief. 16, 1902, p. 423

Type, *Bulimus folliculus*, Pfeiffer

Range India, Farther India, Malaysia, China, Japan, Formosa, New Guinea; Fiji, Samoa, and Pelew Is.

Shell minute, generally ovoid, dextral or sinistral, scarcely perforate; aperture subcircular, peristome interrupted, reflected, generally double; columellar margin generally with a narrow entering lamella; operculum thin, cartilaginous, composed of few whorls, bordered by a prominent ridge.

458. *Diplommatina acutulus*, *Godwin-Austen*.

Diplommatina acutulus, Godwin-Austen, Rec. Ind. Mus. viii, 1918, p. 577, text-fig. 4 c

Original description—"Shell dextral, very elongate and slender; sculpture fine regular rather close costulation, colour white, with a very pale ochraceous tint, spire turreted, suture impressed, whorls 9, regularly increasing from the apex to the 7th, which is the largest, sides convex, aperture ovate, vertical; peristome circular, double, columellar margin subvertical, tooth small, blunt

"Major diam. 1, total length 2.4 mm."

Hab. India. Mimi Hills (officers of Mimi Mission, 1911-1912).

"This species recalls *D. exilis*, W. Blf., from Ava, but it is far more attenuate and smaller. It is a beautiful shell, and fortunately 2 examples were found in the earth which had fallen out of empty shells of *Cyclophorus*" (*Godwin-Austen*.)

459 *Diplommattina affinis*, *Theobald*

Diplommattina affinis, Theobald, J A S B xxxiv, part 2, 1870, p 398, Pfeiffer, Mon. Pneum Suppl 3, 1875, p 70, Hanley & Theobald, Conch Ind 1876, p xii, Theobald, Cat. Shells Brit India, 1876, p 41, Godwin-Austen, Land & Freshw Moll India, 1, 1880, p 181

Diplommattina (*Eudiplommattina*) *affinis*, Kobelt & Mollendorff, Nachr Deuts. Malak Ges. xxx, 1898, p 135, id, Cat Pneum. 1899, p 55

Diplommattina (*Diplommattina*) *affinis*, Kobelt, Das Tierreich, Lief 16, 1902, p 424.

Original description —“Testa dextrorsa, ovata, turrata, vix rimata, aufract. 7, regulariter crescentibus, transversum leviter striatis, ultimo antice valde ascendente *D pullula* modo, apertura ovali, margine columellari recto, dente parvo instructo, labro duplici, extra expansiusculo.

“Long. 18 [4·5 mm.], lat ·08 unc. [2 mm.]”

“*D. pullula* differt magnitudine, spira minus attenuata et apertura magis rotundata” (*Theobald*)

Hab Burma Upper Salween Valley, Shan States (*Theobald*).

460 *Diplommattina ambigua*, *Godwin-Austen*.

Diplommattina ambigua, Godwin-Austen, Proc. Zool Soc 1892, p. 513, id, Land & Freshw Moll India, 11, 1897, p 8, pl 64, fig 2

Diplommattina (*Eudiplommattina*) *ambigua*, Kobelt & Mollendorff, Nachr Deuts Malak Ges xxx, 1898, p. 135, id, Cat Pneum. 1899, p 55

Diplommattina (*Diplommattina*) *ambigua*, Kobelt, Das Tierreich, Lief 16, 1902, p 424

Original description —“Shell dextral, large, solid, sculpture fine, rather close costulation on all the whorls, colour horny white, spire high, sides rather flat above, apex rather acuminate, suture impressed, whorls 8, flatly convex; constriction in front, above the aperture; aperture oval, vertical, peristome strong, closely double, reflected, columellar tooth small for size of the shell, situated well in front and directed downwards

“Major diam 3; alt. axis 5·5 millim”

Hab Burma: south of Bural Range, Manipur (*Godwin-Austen*).

“This is one of the largest species from these mountains I also got it at Kezakenomth, one specimen measuring 6·5 millim in height of spire.” (*Godwin-Austen*)

461 *Diplommattina angulata*, *Theobald* & *Stoliczka*

Diplommattina angulata, Theobald & Stoliczka, J A S B xh, part 2, 1872, p 331, pl 11, figs, 3, 3a, 3b, Pfeiffer, Mon Pneum Suppl 3, 1875, p 78, Hanley & Theobald, Conch Ind 1875, pl 140, fig 7, Nevill, Hand List, 1, 1878, p 285, Godwin-Austen, Land & Freshw Moll India, 1, 1880, p 184.

- Palauana angulata*, Theobald, Cat Shells Brit India, 1876, p 43
Diplommatina (Eudiplommatina) angulata, Kobelt & Mollendorff,
 Nachr. Deuts. Malak. Ges. xxx, 1898, p 135, id., Cat. Pneum.
 1899, p 55
Diplommatina (Diplommatina) angulata, Kobelt, Das Tierreich,
 Lief. 16, 1902, p 424

Original description —“D. testa ovato elongata, dextrorsa, vix rimata, sordide albida, anfractu penultimo latissimo, apice obtusiusculo, pallide rubido, submamillato, anfractibus sex, primis duobus lævigatis, cæteris valde convexis, ad peripheriam plus minusve distincter angulatis, transversim confertissime costellatis aut acute striatis; ultimo basi contracto; sutura profunda, simplice, apertura lati circulari, peristomate undique expanso, bilabiato, interno subrecto, ad marginem columellarem dente obliquo instructo, externo ad anfractum penultimum constrictum modice ascendente

“Long. 2, lat. maxima 0.8, diam. apert. 0.6 mm.”

Hab. Buina. Damotha, Moullmain (*Theobald*).

“The peculiar angulation of the whorls, combined with the very close transverse costulation, or almost striation, and the proportionately large aperture readily separate this species from any other as yet known. Mr. Theobald obtained numerous specimens on the limestone hill near Damotha, and also south of Moullmain, together with *D. carneola*, Stol.” (*Theobald & Stoliczka*)

Diplommatina (Diplommatina) austeni, Kobelt, Das Tierreich,
 Lief. 16, 1902, p 425

Original description —“Testa dextrorsa non rimata, conico-ovato, albida vel succinea. Spira superna conica, non attenuata, sutura impressa, apice obtusiusculo. Anfr. 6, primi 3 gradatim crescentes, confertim minute costulati, ultimi lævigati vel costulis subobsoletis signati, antepenultimus major, ultimus aliquando lineis subdistans versus aperturam signatus, antice ascendens, subtus rotundatus. Apertura verticalis oblique subovalis, perist. merassatum, mediocriter expansum, duplex, margine columellari verticali, angulo aperto subtus desinente, basali rotundato, plica columellari mediocri, callo parietali expanso.

“Long. $2\frac{1}{2}$, diam. $1\frac{1}{8}$ mill.; apertura c. perist. 1 mill. longa, intus $\frac{2}{3}$ lata.”

Hab India Cherra Poonje and Maotherichan, Khasi Hills (Godwin-Austen), banks of Dikrang River, Dafia Hills, large var. (Godwin-Austen)

"I some years ago received a specimen of this species from Mr Theobald as *D polypleuris*, Bens. On comparing the series of *Diplommatinae* collected by Captain Godwin-Austen with Mr. Benson's description, it is evident that the type of that species belonged to a different form, found abundantly by Captain Godwin-Austen with the present species on the Maotherichan ridge, part of the northern scarp of the Khasi Hills, and distinguished from the present form by its much stronger sculpture, less conical spire, deeper suture, and rounder mouth. It is a smaller form. Mr Theobald's type specimens of *D polypleuris* were from Nancai, also on the northern portion of the Khasi plateau. *D. austeni* varies considerably in the sculpture of the lower whorls, which are in most specimens quite smooth. One individual sent is considerably more tumid than the type, but presents no other difference of importance" (*Blanford*.)

Diplommatina (*Diplommatina*) *blanfordiana*, Kobelt, Das Tierreich, Lief 16, 1902, p 426

Original description :—"Testa dextiora, foveato-rimato, ovato-acuminata, confertim acicuto-costulata, albida, spira ovato-pyramidata, superne attenuata, apice acutiusculo, sutura impressa, anfractibus $7\frac{1}{2}$ convexis, antepenultimo majusculo tumido, ultimo antice ascendente, apertura subverticali, late auriculari, plica columellari valida nutante munita, peristomate expanso, extus varice retroflecta remotiuscula valida aucto, infra ad sinistram subangulato, marginibus callo parietali crasso expanso appresso junctis, columellari leviter sinuato. Operc. —?"

"Long. $4\frac{1}{2}$, diam. $2\frac{1}{2}$ mill."

Hab India Darjeeling (*Blanford*, *Stoliczka*, *Mammwanmy*). Western Bhutan Hills (*Robert*)

"Independently of its smaller size and stronger costulation, this shell is distinguished from *D pachycheilus* by its foveate rimation behind the thin columellar lip, and by the retroflect variciform second peristome, which is remote in its course, on the right side, from the thin actual peristome, but joins it below the umbilical cavity. In *D. pachycheilus* the peristome is thickened and bifurcate at the insertion of the outer lip, and there is no

remote varix; while the incrassate columellar lip is reflected over the rimation, and entirely conceals it. The last whorl ascends more conspicuously in front than in *D. pachycheilus*, although it rises considerably also in that shell—a feature which I omitted in the description given in the 'Annals' for 1857. The costulation of *D. pachycheilus* is very variable; in some specimens it disappears in the lower whorls, in others on the upper ones only; occasionally it pervades the whole surface." (*Benson.*)

464 *Diplommatica burti*, Godwin-Austen

Diplommatica burti, Godwin-Austen, J A S B. xlv, part 2, 1875, p. 8, pl. 4, fig. 4, Pfeiffer, Mon. Pneum Suppl. 3, 1876, p. 393, Hanley & Theobald, Conch. Ind. 1876, p. xii; Nevill, Hand List, 1, 1878, p. 286 (*burti*).

Diplommatina crispata, Hanley & Theobald, Conch. Ind. 1870, pl. 141, fig. 6, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 183

Diplommatina (Eudiplommatina) crispata, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommatina (Diplommatina) crispata, Kobelt, Das Tierreich, Lief. 16, 1902, p. 429.

Original description —"*Diplommatina* [Pal.] testa conoiden, medio latissima, sordide albida, anfractibus 7, primis duobus (rare 1½) mammillatis, lævigatis convexis, sequente convexiusculo, conferatim lamellose striato, ceteris medio angulatis, crasse lamellatis, lamellis crebris, inæqualibus, tenuibus, undulatis et crispatis, ad peripheriam angulosam spiniforme productis, latere interiore excavatis, anf. penultimo haud distincte constricto; ultimo angustiore, basi convexiusculo, apertura perobliqua, circulari, extra dilatata, intus continua, lævi, supra leviter adnata, ad latus columellare incrassata et infra dente pliciforme, vix distinguendo, instructa, margine interno acuto, undique libero; peristomate externo tenui, lamelliforme undulato et late expanso.

"Alt. testæ 2.5; diam. anf. penult. (spimis incl.) 1.5; diam. apert. int. 0.8, d. ap. cum perist. 1 mm.

"Animal albidum, tentaculis cinereo atratis, operculum corneum" (*Stoliczka*.)

Hab Burma Damotha, near Moulmein.

471. *Diplommattina daflaensis*, *Godwin-Austen*

Diplommattina austeni (large var.), Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 178

Diplommattina daflaensis, Godwin-Austen, Land & Freshw. Moll. India, 1, 1886, p. 174, pl. 45, figs 4, 4a

Diplommattina (*Eudiplommattina*) *daflaensis*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommattina (*Diplommattina*) *daflaensis*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 430.

Original description:—"Shell dextral, ovately fusiform, moderately thick, pale horny. Sculpture very fine, almost disappearing on the last two whorls. Sides of spire moderately flat. Whorls 7, penultimate and antepenultimate the largest, the last ascending slightly. Constriction in middle of aperture, which is circular and vertical; columellar margin rounded, tooth moderate. Peristome simple, double, rather strongly formed, the inner lip continuous.

"Alt. 0.15 [3.75 mm], diam. 0.70 inch [? 0.07 inch = 1.75 mm.]

"This shell is very similar in form to *D. austeni*, W. Blf., from the Khasi Hills, but it is much larger, that shell only being 0.90 [? 0.09] inch in length, and the two last whorls are not so smooth and show slight traces of sculpture" (*Godwin-Austen*, 1876)

"Comparing this more closely with the form from the Khasi Hills, it differs very much in its general shape, being much smaller below, the antepenultimate being much larger in proportion to the penultimate, the apex is more attenuate, and the sculpture differs. It must therefore be distinguished as a species." (*Godwin-Austen*, 1886)

Hab. India. Diklung Valley, Dafia Hills (*Godwin-Austen*)

472. *Diplommattina decorosa*, *Godwin-Austen*.

Diplommattina decorosa, Godwin-Austen, Proc. Zool. Soc. 1892, p. 510, id., Land & Freshw. Moll. India, 11, 1897, p. 5, pl. 64, fig. 1

Diplommattina (*Eudiplommattina*) *decorosa*, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56

Diplommattina (*Diplommattina*) *decorosa*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 430.

Original description —"Shell elongately fusiform, not rimate; sculpture, fine, close, regular costulation on all the whorls; colour pale whitish horny; spire, sides somewhat flat, apex rather acuminate, rapidly diminishing; suture moderately impressed; whorls 8, sides flatly convex, penultimate and antepenultimate

equal; constriction above the aperture, towards the outer margin; aperture ovate, rounded below, peristome thickened; columellar tooth small, in front.

"Major diam. 2.5; alt. axis 5.5 millim."

Hab India. Angham-Naga Hills (*Doherty*).

"There was one solitary specimen in my collection of this species from north of the Burrell, and 6 specimens, but smaller in size (4.5 millim in height of spire), from the peak of Shuroiturar, in the Lahupa-Naga Hills, north of Mumpui. Mr Aldridge's collection contains a large number, and I have selected the type out of these.

"On the boss of trap rock near the village of Phunggan I found a number of a small variety, 4.5 millim. in height of spire, but differing in no respect, except in size, from the typical species, only that they are all of a pale sea-green tint

"The same form occurred on Kopamedza Peak, with this difference, that the constriction was more to the right, directly over the outer margin of the peristome. From Prowi, specimens were still smaller in size, 3.8 millim." (*Godwin-Austen*.)

473. *Diplommatina depressa*, *Godwin-Austen*

Diplommatina depressa, Godwin-Austen, J A S B xxxix, part 2, 1870, p. 2, pl. 1, fig. 2. Hanley & Theobald, Conch. Ind. 1875, pl. 120, figs. 5, 6, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 77, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand List, 1, 1878, p. 286

Diplommatina (*Eudiplommatina*) *depressa*, Kobelt & Mollendoiff, Nachr. Deuts. Malak. Ges. xxx, 1897, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommatina (*Diplommatina*) *depressa*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 430

Original description — "Shell dextral, not rimate, ovate, depressed; colour light amber, tinged rufoescent at apex, costulation throughout close but sharply defined, more distant on body whorl, spire conoidal, apex blunt, suture deeply impressed, whorls 5, sides with considerable convexity, ante-penultimate much the largest and tumid, last whorl rises on the penultimate, almost to the suture, contracting the breadth of latter excessively; aperture vertical, broadly auriculate, peristome solid, double, the outer lip thick and strong, interrupted; the inner continuous, spreading in a broadly appressed parietal callus upwards on the sinistral side; columellar tooth large and thick, base prominent, descending

"Operculum and animal not observed.

"Height $1\frac{1}{2}$ mm.; diameter $\frac{3}{4}$ mm., diameter of aperture $\frac{1}{3}$ mm."

Hab. India. woods at Jawai, Jaintia Hills, Lalainkote, 4000 ft. (*Godwin-Austen*).

"The small size, few whorls, impressed suture, obtuse apex, etc. distinguish this form readily. As in the preceding species [*D. jatingana*], the last whorl rises rapidly on the penultimate,

and to a greater extent than in most species of the genus. In all these characters, it exhibits a nearer approach to *Opisthostoma* than any species of *Diplommatina* yet described." (Godwin-Austen)

474 *Diplommatina diplochilus*, Benson.

Diplommatina diplochilus, Benson, A M N H ser 2, xix, 1857, p 202, Pfeiffer, Mon Pneum Suppl 1, 1858, p 10, Theobald, J A S B xxvii, 1858, p 318, Pfeiffer, Novit Conch. ser 1, ii, 1860, p 142, pl 37, figs 13-15, Godwin-Austen, J A S B. xxxii, 1868, p. 83, pl. 2, figs. 1, 1 a, Hanley & Theobald, Conch Ind. 1875, pl. 140, figs 2, 3, p 55 (*diplochelos*), Theobald, Cat Shells Brit. India, 1876, p 42, Nevill, Hand List, i, 1878, p 286

Diplommatina (*Eudiplommatina*) *domuncula*, Kobelt & Mollendorff, Nachr Deuts. Malak. Ges. xxv, 1898, p 136, id, Cat. Pneum. 1899, p. 56

Diplommatina (*Diplommatina*) *domuncula*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 481

Original description —"Shell dextral, fusiform, sculpture, strong, regular, distant costulation on all the whorls, much closer

near the constriction, first two whorls smooth; colour pale whitish with an ochraceous tint, spire with convex sides, apex blunt, suture well impressed, whorls $7\frac{1}{2}$, sides convex, antepenultimate the largest, last whorl does not rise upon the penultimate; constriction above the aperture, aperture circular, subvertical, curvilinear as seen from the side, peristome double, not very much thickened, columellar tooth very minute, internal

"Major diam. 1.3; alt. axis 3 millim."

Hab. India Margarita, Naga Hills (*Doherty*)

"This is a very distinct form, quite new to me, and belonging to a group which is not represented, so far as I know, in the Khasi and Jaintia Hills." (*Godwin-Austen.*)

476. *Diplommatina edentula*, *Godwin-Austen.*

Diplommatina edentula, Godwin-Austen, Land & Freshw Moll India, 1, 1886, p. 185, pl. 49, figs 7, 7a

Diplommatina (*Eudiplommatina*) *edentula*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommatina (*Diplommatina*) *edentula*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 481.

Original description—"Shell ovately fusiform, not rumate, thin; sculpture minute, longitudinal striæ, crossed by distant, strong costulation, colour whitish ochre, spire turreted, sides convex, apex rounded; suture moderately impressed, whorls 7, regularly increasing, the antepenultimate slightly the largest, the constriction above the aperture, aperture vertical, circular; peristome double, but not strongly developed; columellar tooth very small.

"Major diam. 1.3, alt. axis 2 mm."

Hab. Burma: Moulmein (*Theobald*).

"This is another of the small, toothed, dextral forms from this locality, and it cannot for a moment be confused with *D. everseti*, it may possibly be the shell referred to *D. polypleuris* and said to have been found near Moulman" (*Godwin-Austen.*)

477. *Diplommatina elongata*, *Godwin-Austen.*

Diplommatina tumida, var., Godwin-Austen, J. A. S. B. liv, part 2, 1875, p. 9, pl. 4, fig. 7

Diplommatina elongata, Godwin-Austen, Proc. Zool. Soc. 1892, p. 511, id., Land & Freshw. Moll. India, 11, 1897, p. 7, pl. 64, fig. 6

Diplommatina (*Eudiplommatina*) *elongata*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommatina (*Diplommatina*) *elongata*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 482.

Original description:—"Shell elongately fusiform, thin, pale yellowish green; sculpture very faint above, quite smooth on the

three last whorls, spire attenuate, sides flat, suture moderate, whorls $8\frac{1}{2}$ to 9, the antepenultimate the largest; constriction in front above the aperture; last whorl ascends slightly, aperture oval, vertical, peristome double, thickened, slightly reflected, columellar tooth small and remote.

"Alt 0.22 [5.5 mm], diam. 0.13 inch [3.25 mm]."

Hab. India: Kezakenomih, Naga Hills (Godwin-Austen)

"This shell is a better type of this form of *Diplommata* than the very tumid shell first described from Asalu; the form changes much in different localities, in some being much more solid and more distinctly and distantly sculptured near the apex; a variety from the Eastern Burial is 0.20" in alt, rich dark amber-coloured, has the three lower whorls smooth and glassy, the columellar tooth still more remote, and the constriction just behind the peristome; it departs so widely from the original type that it might almost be separated." (Godwin-Austen)

478. *Diplommata exilis*, Blanford

Diplommata exilis, Blanford, J. A. S. B. xxvii, 1863, p. 325, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 10, Godwin-Austen, J. A. S. B. xxxvii, 1868, p. 84, pl. 4, figs 3, 3a, Theobald & Stoliczka, op. cit. xli, part 2, 1872, p. 331, Hauley & Theobald, Conch. Ind. 1875, p. 49, pl. 119, fig. 10, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand List, i, 1878, p. 284, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 180, pl. 49, fig. 1.

Diplommata (Eudiplommata) exilis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommata (Diplommata) exilis, Kobelt, Das Tierreich, Lief. 16, 1902, p. 432.

Original description.—"Shell dextral, not umate, very slenderly subfusiform, rather solid, moderately, closely and obliquely ribbed throughout. Spire turreted with straight sides, apex obtuse, suture impressed. Whorls $7\frac{1}{2}$, rounded, antepenultimate slightly larger than the penultimate. Lower whorl rising a little near the aperture, which is subvertical, slightly inclined downwards, almost circular, the columellar margin being straightened, terminating in a right angle at the base, and bearing a moderate-sized internal tooth. Peristome double, the inner lip being prominent, slightly expanded, and continuous upon the penultimate whorl, but not forming a broad callus, outer lip slightly expanded, retro-relict. Operc. ?

"Alt. 3, diam. $1\frac{1}{2}$, diam. ap. $\frac{2}{3}$ mm."

Hab. Burma: Mya Lent Doung, Ava (Blanford)

"The most slender species of the genus with which I am acquainted, and easily distinguished from all others by its long narrow form." (Blanford.)

479. *Diplommatina exserta*, Godwin-Austen.

Diplommatina exilis, var *exserta* (nom. nud.), Nevill, Hand List, 1, 1878, p. 284

Diplommatina exserta, Godwin-Austen, Land & Freshw. Moll. India, 1, 1886, p. 184, pl. 49, figs 2, 2a

Diplommatina (*Eudiplommatina*) *exserta*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56

Diplommatina (*Diplommatina*) *exserta*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 432

Original description.—"Shell elongately fusiform, not rimate; sculpture, minute spiral striae, crossed by rather close transverse costulation, coarser and more distant on the apical whorls, less apparent on the last, colour very light sienna; spine high, turreted, sides flat, apex small, whorls 8, sides rounded, the antepenultimate the largest, the last ascending, constriction just behind the aperture, aperture vertical, oval; peristome closely double at base at right angles to the axis, columellar margin sub-vertical, the tooth not at all prominent, blunt and rounded.

"Major diam. 1, alt. axis 3 mm."

Hab. Burma. Damotha Cave, Moulmein (*Theobald*).

"This shell is very like *D. exilis*, the constriction, however, is much more defined, there is no spiral striation on the surface of *D. exilis*, and there is great difference in the form and size of the columellar tooth. Its abnormal form serves to characterize *D. exserta* well, and it may be compared in this respect to *D. nico-barica*." (*Godwin-Austen*.)

480. *Diplommatina fallax*, Preston

Diplommatina fallax, Preston, Proc. Malac. Soc. xi, 1914, p. 24, text-fig.

Original description.—"Shell a miniature of *D. fumentum*, Preston, but rather lighter in colour, and with much coarser sculpture, the parietal callus is broader and less arched, and is furrowed at its junction with the margin of the labrum, the columella is more arched and has a rather coarser plait, the aperture also is rather sub-circular than quadrilateral, as in that species.

"Alt. 4.5, diam. maj. 2 mm. Aperture alt. .75, diam. .75" (*Preston*.)

Hab. India: Naga Hills.

481. *Diplommatina folliculus*, Pfeffer.

Bulinus folliculus, Pfeffer, Symb. Hist. Helic. iii, 1846, p. 83; id., Mon. Helic. ii, 1848, p. 81; Reeve, Conch. Icon v, 1850, pl. 87, fig. 644

B. xxxvii, 1868, p. 83, pl. 1, figs. 1, 2 (shell); pl. 3, figs. 5, 5a (animal), Hauley & Theobald, Conch. Ind. 1875, pl. 140, figs. 8, 9, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand List, I, 1878, p. 288.

Diplommattina (Eudiplommattina) folliculus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommattina (Diplommattina) folliculus, Kobelt, Das Tierreich, Lief. 16, 1902, p. 432, text-fig. 97 (p. 423).

"*T. breviter rimata*, ovato-acuminata, tenuis, distincte et oblique costata, pallide fusciscenti-albida, spira conica, acutiuscula; anfr. 7 convexi, ultimus angustior, antice subascendens, $\frac{1}{3}$ longitudinis vix æquans, apertura subverticalis subcircularis, perist. duplex, breviter expansum, marginibus approximatis, callo junctis, dextro arcuato, columellari dilatato, patente.

"Long. $3\frac{1}{2}$, diam. medio 2 mill, ap. long. 1 mill vix superans." (*Pfeiffer*, 1852)

Hab. India. Landour, Simla, Naini Tal (*Stoliczka*).

482. *Diplommattina frumentum*, *Preston*

Diplommattina frumentum, Preston, Proc. Malac. Soc. xi, 1914, p. 23, text-fig.

Original description:—"Shell fusiform with acute apex, pale-yellowish horn-colour, somewhat shining; whorls 8, the first six regularly increasing, the seventh broad and convex, the eighth swollen, but smaller, sculptured with fine transverse striae, suture impressed, columella descending vertically, bearing a rather fine, oblique plait situated well within the aperture, and diffused above into an arched, well-defined callus, which joins the upper margin of the labrum, and which is obliquely furrowed in the middle, labrum whitish, broad, somewhat thickened, reflexed, aperture subquadrilateral.

"Alt. 0.5, diam. maj. 3, min. 2.75 mm. Aperture: alt. 1.5, diam. 1 mm" (*Preston*).

Hab. India. Naga Hills.

483. *Diplommattina garoensis*, *Godwin-Austen*

Diplommattina garoensis, Godwin-Austen, Proc. Zool. Soc. 1892, p. 511, id., Land & Freshw. Moll. India, II, 1897, p. 8, pl. 64, figs. 3, 3a.

Diplommattina (Eudiplommattina) garoensis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 136, id., Cat. Pneum. 1899, p. 56.

Diplommattina (Diplommattina) garoensis, Kobelt, Das Tierreich, Lief. 16, 1902, p. 433.

Original description —"Shell dextral, globosely fusiform, solid; sculpture, distant, very fine ribbing on the 3 apical whorls, the rest smooth and shiny, colour pale ochraceous, spire high, side

very convex, apex acuminate, and when viewed from the side the axis is curved, suture impressed, whorls $6\frac{1}{2}$, all tumid, the antepenultimate much swollen and by far the largest, constriction above the aperture, aperture vertical, oval, peristome very much thickened and double, columellar tooth moderately large.

"Major diam 23, alt axis 3.5 millim."

Hab. India Garo Hills (Robert).

"This species may be known by its very large antepenultimate whorl and the curved axis of the spire, and its strongly developed peristome and smooth lower whorls. It formed part of a collection of shells made by Mr W. Robert, of the Khasi Hills Survey Party, in the Garo Hills, during the military expedition into them in 1872-3 Ten specimens were found." (Godwin-Austen.)

484. *Diplommatina gibberosa*, Godwin-Austen.

Diplommatina gibberosa, Godwin-Austen, Proc Zool Soc 1892, p 519, id., Land & Freshw. Moll India, II, 1897, p 16, pl 66, figs. 12-12 c

Diplommatina (*Eudiplommatina*) *gibberosa*, Kobelt & Mollendorff, Nachr. Deuts. Malak Ges xxx, 1898, p 136, id., Cat Pneum. 1899, p. 56

Diplommatina (*Diplommatina*) *gibberosa*, Kobelt, Das Tierreich, Lief 16, 1902, p 433.

Original description.—"Shell sinistral, ovately fusiform; sculpture, very distant fine costulation, 9 ribs on the antepenultimate whorl when viewed from the front, colour very pale greenish, spire low, sides rounded, apex blunt; suture very impressed; whorls $4\frac{1}{2}$, very swollen, sides very convex, penultimate much the largest, constriction on penultimate in centre above the aperture, aperture oval, subvertical, peristome double, strong, columellar tooth small, internal

"Major diam. 15, alt axis 2.2 millim."

Hab India: Assam, south of the Barak River (Godwin-Austen).

"The nearest ally of this species is *D. jayntica*, G.-A., it differs, however, much in form, particularly in the expanded penultimate whorl and in its very distant sculpture. A very large number of it were collected in the above-named locality, and a single example at Prow in the Lahupa-Naga country

"In the collection sent me by Mr Aldrich in a box marked Naga Hills were about 40 specimens of this shell. The exact locality was not recorded, but I take it they were from some part of the Anghami-Naga Hills" (Godwin-Austen.)

485. *Diplommatina gibbosa*, Blanford.

Diplommatina gibbosa, Blanford, J A S B. xxxvii, 1868, p 80, pl. 2, figs. 4, 4 a, 4 b; Pfeiffer, Mon. Pneum Suppl 3, 1875, p. 79, Hanley & Theobald, Conch. Ind 1875, pl 120, figs 1, 4, Theobald, Cat. Shells Brit India, 1876, p. 42, Nevill, Hand List, I, 1878, p 286.

Diplommatina (Eudiplommatina) gibbosa, Kobelt & Mollendorff, Nachr Deuts Malak. Ges xxx, 1898, p 136, id, Cat Pneum 1899, p. 56

Diplommatina (Diplommatina) gibbosa, Kobelt, Das Tierreich, Lief. 16, 1902, p. 433

Original description.—"Testa sinistrorsa, vix subrimata, gibboso-ovata, tumida, succinea, lævigata, parum nitida, tenuiuscula. Spira supra conoidea, sutura valde impressa, apice obtusiusculo. Anfr. 5, antepenultimus major, ventricosus, ultimus subtus rotundatus, alte ascendens. Apertura obliqua, subelliptica, plica columellari valida obliqua munita, infra plicam excavata; peristoma leviter sinuatum, expansum, duplex, externum retro relictum, internum continuum, patens, callo parietali lato, suturam fere attingente

"Long 3, diam. $1\frac{1}{2}$ mill. Ap. c. perist. $1\frac{1}{2}$ mill longa, intus vix 1 lata"

Hab. India: Habiang, Garo Hills (Godwin-Austen).

"This very interesting species differs widely in form from the only previously described sinistrorse *Diplommatina* inhabiting India, *D. huttoni*, Pfr., more widely than it does from some of the reversed forms met with in the Oceanic region. It shows a considerable resemblance in form to *D. martensi*, H. Ad., of unknown locality, figured in the Proc Zool. Soc. for 1866, but which is said by its describer to belong to the section *Diancta* of Martens, characterised by a constriction at the back of the penultimate whorl. In *D. gibbosa*, as in most Indian *Diplommatina*, there is a slight tendency to constriction in front of the penultimate whorl, to which an internal rib appears to correspond, but which is covered and concealed to a great extent by the parietal callus of the peristome." (Blanford.)

486. *Diplommatina godwini*, Mollendorff.

Diplommatina concinna (non II Adams, 1872), Godwin-Austen, Proc Zool. Soc 1892, p 519; id., Land & Freshw Moll India, ii, 1897, p 15, pl. 66, fig 10

Diplommatina (Eudiplommatina) godwini (nom. nov.), Mollendorff, Nachr Deuts Malak Ges xxx, 1898, p. 136, Kobelt & Mollendorff, Cat Pneum 1899, p 56

Diplommatina (Diplommatina) godwini, Kobelt, Das Tierreich, Lief. 16, 1902, p. 433.

Original description —"Shell dextral, solid, fusiform; sculpture, very strong, rather distant costulation, spire tapering rapidly, apex acuminate; suture impressed; whorls 7, sides convex, penultimate and antepenultimate about equal in size; constriction hardly apparent, just above the aperture, aperture circular, vertical, columellar tooth quite minute, only an indication of it; peristome double, strongly developed.

"Alt. axis 1.6 millim."

Hab. India: Naga Hills, probably south of Margarata (Doherty).

"This is very distinct from any of the minute species I have hitherto examined from this part of India, it is distinguished by its thick shell and strong costulation." (*Godwin-Austen*)

487. *Diplommatina henzadaensis*, *Godwin-Austen*.

Diplommatina henzadaensis, *Godwin-Austen*, Land & Freshw. Moll India, 1, 1886, p. 179, pl 46, figs 6, 6 a

Diplommatina (*Eudiplommatina*) *henzadaensis*, Kobelt & Mollendorff, Nachr Deuts Malak Ges. xxx, 1898, p. 137, id., Cat Pneum. 1899, p 57

Diplommatina (*Diplommatina*) *henzadaensis*, Kobelt, Das Tierreich, Lief. 16, 1902, p 434.

Original description.—"Shell dextral, ovately turreted, scarcely rimate, sculpture rather distant, fine; spire, sides convex, apex blunt, suture well impressed; whorls 6, rounded, the antepenultimate the largest, the constriction being just above the upper outer margin of the peristome; aperture circular, peristome double, continuous, solid for size, columellar tooth well developed
"Major diam 1, alt. axis 1.6 mm"

Hab. Burma Kyoung Gyoung Nulla, Henzada, Pegu

"There is only one specimen in Mr Blanford's collection, but as it is fully grown, though so very minute, and is so unlike anything before described from Pegu, I have ventured on figuring and naming it." (*Godwin-Austen*.)

488. *Diplommatina homei*, *Godwin-Austen*

Diplommatina homei, *Godwin-Austen*, J A S B xlv, part 2, 1876, p. 178, pl 7, fig. 6

Diplommatina homei, Nevill, Hand List, 1, 1878, p 287.

Diplommatina (*Diplommatina*) *homei*, Kobelt, Das Tierreich, Lief 16, 1902, p. 435

Original description.—"Shell dextral, ovate, tumidly fusiform, strong, dull ochreous, very fresh shells often ruddy orange-coloured, sculpture very fine and filiform on the upper whorls, rather coarser on the last approaching the aperture. Spire with sides rather flat, penultimate and antepenultimate whorls about equal, the last whorl has the constriction in the middle of the aperture, and ascends to it. Aperture vertical, columellar margin angular below, the tooth well developed and placed low down, outer margin rounded. Peristome thick, double, both lips continuous and well reflected on outer margin.

"Alt. 0.24 [6 mm], diam 0.14 [3.5 mm], apert. 0.08 in. [2 mm]."

Hab. India. Toruputu and Shengorh Peaks, Daffa Hills, Assam (*Godwin-Austen*).

"This species is conspicuous from its large size and tumid flat-sided form." (*Godwin-Austen*)

489. *Diplommatina huttoni*, Pfeiffer.

Diplommatina huttoni, Pfeiffer, Zeits. Malak. viii, 1851, p 148 (nom nud.), id, Proc Zool Soc. 1852, p 167, id, Mon Pneum 1852, p 123, id., Cat Phaneropn Brit Mus. 1853, p 86, id, Conch-Cab, Cyclostomaceen, 1854, p 389, pl. 48, figs. 36, 37, Adams, Gen. Moll India, i, 1886, p. 170, pl 45, figs 7, 7 a, 7 b

Diplommatina (*Eudiplommatina*) *huttoni*, Kobelt & Mollendorff, Nachr. Deuts Malak. Ges. xxx, 1898, p 137, id, Cat. Pneum 1899, p. 57

Diplommatinu (*Diplommatina*) *huttoni*, Kobelt, Das Tierreich, Lief 16, 1902, p 435.

Original description.—"D. testa sinistrorsa, subrimata, ovato-conica, eleganter confertum et oblique costulata, daphana, albida; spira conica, acuta, anfract 6 perconvexis, apertura subcirculari, perist. duplice, expanso.

"Long. $2\frac{1}{2}$, diam 1 mill." (*Pfeiffer*)

Godwin-Austen (*l. c.*) gives the following measurements:—Major diam 0.83; alt. axis 1.9 mm.

Hab India Mussoorie, N. W. Himalayas (*Godwin-Austen*).

In 1867 the late R. J. Lechmere Guppy recorded the finding of this species in Trinidad, suggesting its migration—together with *Emea bicolor*, Hutton—across the Tertiary Atlantis. The late William Blanford discussed this question at great length in 1868 (*loc cit*) and suggested the possibility of these molluscs having been transported with living plants, as others are well known thus to have been transported. Lieut.-Col. Godwin-Austen has compared specimens of *D. huttoni*, from the typical locality Mussoorie, with eighteen specimens from Trinidad, lent to him by the late Sir Rawson Rawson, and he found that the two forms were specifically distinct, and he has renamed and described the Trinidad shell as *D. occidentalis* *.

The question, however, as to which of the Indian species has been transported to America still remains unsolved. If the Trinidad form assimilated to any of the known species, Lt.-Col. Godwin-Austen, with his intimate and extensive knowledge of the Indian Fauna, would have been able to detect it. The Western Hemisphere being altogether outside the range of this genus, there can be no doubt that the species must have been carried across through human agency. The well-known case of *Eulota similis* may be cited in this connection, this species having become distributed by similar means over a great part of the world. (*Cf* Fauna Brit. India, Mollusca, vol. ii, 1914, p 201.)

* Land & Freshw. Moll. India, i, 1886, p. 173, pl 45, figs 8, 8 a, 8 b.

490. *Diplommatina jaintiaca*, Godwin-Austen.

Diplommatina, n. sp., Godwin-Austen, J. A. S. B. xxxvii, part 2, 1868, p. 84, pl. 3, figs 3, 3 a, 3 b

Diplommatina jaintiaca, Godwin-Austen, op. cit. xxxix, part 2, 1870, p. 4, Pfeiffer, Mon. Pncum. Suppl. 3, 1875, p. 80; Hanley & Theobald, Conch. Ind. 1875, pl. 120, figs 2, 3, Theobald, Cat. Shells Brit. India, 1878, p. 42, Nevill, Hand List, 1, 1878, p. 286.

Diplommatina (*Erdiplommatina*) *jaintiaca*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pncum. 1899, p. 67.

Diplommatina (*Diplommatina*) *jaintiaca*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 485.

Original description :—"Shell sinistral, elongately ovate, rather tumid, sub-uminate, rich amber colour, sharply very regularly and distantly costulated, rather solid, spire conical, slightly convex, whorls $5\frac{1}{2}$, sides convex, suture deep, penultimate whorl largest, last whorl strongly constricted in front of the aperture, rising very slightly behind the peristome, chiefly between the inner and outer peristome, aperture slightly oblique, sub-circular, peristome double, inner slightly expanded, scarcely thickened, terminating in a sinuation at the base of the columella, outer greatly produced, expanded, continuous, parietal callus thin moderately extended, columellar tooth blunt, moderately developed.

"Height $2\frac{3}{4}$ mm, diameter $1\frac{1}{2}$ mm, diameter of aperture with peristome, $\frac{2}{3}$ mm."

Hab. India, near Jawai, Jaintia Hills, 4500 ft., West Khasi Hills (*Godwin-Austen*).

"This species is very near *D. gibbosa*, from the same region, and thus affording a second instance of a type intermediate between the dextral forms *D. pachycheilus*, *D. diplocheilus*, etc., and the sinistral forms from the Solomon Isles, etc. It is distinguished readily from *D. gibbosa* by its more regularly ovate form, its costulation, and the even, non-sinuated margin of the inner peristome.

"Since the transmission of specimens of *Diplommatina*, published in the Journal for 1868, to Mr. W. Blandford, I have been fortunate enough to discover this species again. As the above quoted figure, on pl. iii, of the "Contributions to Indian Malacology, no. ix," was taken from a single shell, subsequently broken, the species remained unfortunately unnamed and undescribed." (*Godwin-Austen*)

491 *Diplommatina jatingana*, Godwin-Austen.

Diplommatina jatingana, Godwin-Austen, J. A. S. B. xxxix, part 2, 1870, p. 1, pl. 1, fig. 1, Pfeiffer, Mon. Pncum. Suppl. 3, 1875, p. 72, Hanley & Theobald, Conch. Ind. 1875, pl. 139, fig. 7, Theobald, Cat. Shells Brit. India, 1878, p. 42, Nevill, Hand List, 1, 1878, p. 286, Godwin-Austen, Land & Freshw. Moll. India, 1, 1897, p. 11, pl. 65, figs. 8, 8 a

Diplommatina (Eudiplommatina) jatingana, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 187; id., Cat. Pneum. 1899, p. 57.

Diplommatina (Diplommatina) jatingana, Kobelt, Das Tierreich, Lief. 16, 1902, p. 436.

Original description — "Shell dextral, ovate fusiform, solid, pale corneous, specimens, when young, often of a bright sienna, diaphanous, rather finely and sharply costulated on the four whorls near the apex, becoming fainter below, and from the ante-penultimate to the body whorl almost smooth, or with only a faint trace of ribbing; spire conic, sides flattened, apex rather acute, suture slightly impressed below; whorls $7\frac{1}{2}$, the ante-penultimate the largest, penultimate whorl slightly constricted at $\frac{1}{4}$ turn behind the peristome, last whorl ascending chiefly behind the constriction, aperture sub-vertical, broadly carinate; peristome solid, double, columellar margin straight, right-angled at base; the usual tooth, large, coarse and blunt, sometimes descending, lips very slightly expanded, outer more so than the inner, this last continuous, forming a strong callus upon the penultimate whorl.

"Animal pale, almost colourless, tentacles brown, labial ribbon long and tapering.

"Height 4 mm., diameter $2\frac{1}{4}$ mm., diameter of aperture 1 mm."

Hab. India: hill at the junction of the Kayeng and Jatinga Rivers, N. Cachar Hills (*Godwin-Austen*).

"This is a very handsome and peculiar species, and one of the largest I have obtained in these hills; it was only found on the above isolated hill, where it was abundant. I have named it after the large river, the Jatinga, that flows below. The species is nearly allied to *D. blanfordiana* and *D. semisculpta*: it is, however, somewhat more tumid, and has shallower sutures than either of these forms; and while it has not the distant retro-reflex peristome and rimation of the former, it appears to be less sharply angulated at the base of the peristome than the latter. But the most distinctive character is the position of the slight constriction of the penultimate whorl which, instead of being in front of, or above, the aperture, as in *D. blanfordiana*, *D. semisculpta*, and *D. pachychailus*, is at a considerable distance, about $\frac{1}{4}$ turn behind it. Hence the suture of the last whorl rises rapidly behind the constriction, runs for a short distance in front of it parallel with the preceding suture, and finally again ascends to the margin of the peristome." (*Godwin-Austen*.)

492 *Diplommatina labiosa*, *Blanford*.

Diplommatina labiosa, Blanford, J. A. S. B. xxvii, 1868, p. 80, pl. 2, figs 3, 3a, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 70, Hanley & Theobald, Conch. Ind. 1875, pl. 119, fig. 9, Theobald, Cat. Shells Brit. India, 1870, p. 42, Nevill, Hand List, i, 1878, p. 286.

Diplommattina (*Eudiplommattina*) *labiosa*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57.

Diplommattina (*Diplommattina*) *labiosa*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 436.

Original description.—"Testa dextrorsa, non rimata, ovato-acuminata, pallide succinea, solidula. Spira attenuato-conica, subturrita, apice acutiusculo, sutura impressa. Anfr. $7\frac{1}{2}$ -8 convexi, primi confertim costulati, 3 ultimi lævigati, nitiduli, antepenultimus major, ultimus versus aperturam interdum subdistanter costulatus, antice ascendens. Apertura verticalis, late auricularis, subcircularis, plica columellari valida munita, peristoma rectum, incrassatum, subtriplex, externum valde expansum, internum expansum, sulcatum, subduplex, margine columellari brevi, subsinuato, subtus angulo vix saliente desinente; callo parietali, tenui, mediocriter expanso.

"Long. $3\frac{3}{4}$, diam. vix 2 mill. Ap. c. peristomate $1\frac{1}{2}$ unil. longa, diam. intus circa $\frac{3}{4}$."

Hab. Mayong and Habiang, Khasi and Garo Hills (*Godwin-Austen*).

"This shell is, in some respects, intermediate between *D. pachycheilus*, Bens., and *D. diplocheilus*, Bens. It has the general form of the first, but resembles the last in its smooth lower whorls. The peristome is largely developed and peculiar, the inner portion being flatly expanded and almost divided into two portions by a groove, so that the whole lip is almost triple." (*Blanford*.)

493. *Diplommattina levigata*, *Godwin-Austen*.

Diplommattina levigatus, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 179, pl. 7, fig. 7.

Diplommattina levigata, Nevill, Hand List, 1, 1878, p. 287.

Diplommattina (*Diplommattina*) *levigata*, Kobelt, Das Tierreich, Lief. 16, 1902, p. 437.

Original description.—"Shell dextral, tumidly fusiform, colour pale horny, very smooth throughout, slight close coloration on the four apical whorls. Spire rather rapidly diminishing towards the apex; this is rather sharp in some specimens. Suture moderately impressed. Whorls 7, antepenultimate the largest and swollen, the penultimate constricted in front of the aperture, the last ascends but slightly and is puckered on the posterior margin, corresponding with the angular projections of the outer lip. Aperture vertical, peristome solid, double, the inner lip continuous, circular, the columellar process or tooth moderate, the outer lip with an undulating margin, square below, with angular projections, two below and one on the upper outer margin.

"Alt. 0.15 in. [3.75 mm.] (*Godwin-Austen*.)

Hab. India. Dikrang Valley, Daffa Hills, Assam (*Godwin-Austen*).

The waved margin and angular expansions on the outer lip are stated to be its most peculiar characters, and to mark at once its distinctness

494 *Diplommatina minima*, *Beddome*.

Diplommatina minima, Beddome, P Z S 1875, p 442, pl. 52, figs 3, 4, Hanley & Theobald, Conch Ind 1876, p xii, Theobald, Cat Shells Brit India, 1876, Addenda, p. ii, Pfeiffer, Mon Pneum Suppl 3, 1876, p 395, Nevill, Hand List, 1, 1878, p 288, Godwin-Austen, Land & Freshw Moll. India, 1, 1886, p 176, pl 49, fig 13

Diplommatina (*Eudiplommatina*) *minima*, Kobelt & Mollendorff, Nachr. Deuts Malak. Ges xxx, 1898, p. 137, id., Cat Pneum. 1899, p 57.

Diplommatina (*Diplommatina*) *minima*, Kobelt, Das Tierreich, Lief. 16, 1902, p 438

Original description —“Shell dextral, cylindrical, straw-coloured, not rumate, whorls $5\frac{1}{2}$, convex, all except the two upper ones minutely costulated, sutures deep, spire blunt and tapering very slightly, the antepenultimate whorl not larger than the penultimate, the latter very slightly constricted; the position of the operculum over the centre of the aperture, aperture circular; peristome shining, continuous round the lower portion of the penultimate whorl, double in its lower free portion, the columellar margin semicircular, the tooth small but plainly visible under the lens total length $\frac{1}{16}$ inch [1.5 mm.], $2\frac{1}{2}$ times the breadth [0.6 mm.]” (*Beddome*.)

Hab. India: Gudam Hills, Golcondah Hills, Vizagapatam (*Beddome*)

495. *Diplommatina munipurensis*, *Godwin-Austen*.

Diplommatina munipurensis, Godwin-Austen, Proc Zool Soc 1892, p. 518, id, Land & Freshw. Moll. India, ii, 1897, p 14, pl. 66, fig. 6

Diplommatina (*Eudiplommatina*) *munipurensis*, Kobelt & Mollendorff, Nachr. Deuts Malak. Ges xxx, 1898, p 137, id, Cat Pneum 1899, p 57.

Diplommatina (*Diplommatina*) *munipurensis*, Kobelt, Das Tierreich, Lief. 16, 1902, p 438

Original description —“Shell dextral, elongately fusiform; sculpture minute, close costulation, colour very pale greenish grey; spire symmetrical, sides slightly convex, suture well impressed, whorls $6\frac{1}{2}$, sides convex; constriction in front and immediately above the aperture; no columellar tooth, its position indicated by a slight sinuosity on the columellar margin, aperture nearly circular, subvertical, peristome closely double, very slight in form, the inner does not spread much upward on the penultimate whorl

“Major diam. 1.5, alt axis 2.7 millim.”

Hab. Burma: south of the Barak River, between the Mao villages and Manipur (*Godwin-Austen*).

"From the number of specimens found, this appears a very abundant species; I never got anything like it in the Khasi Hills to the west." (*Godwin-Austen*.)

496. *Diplommatina nana*, *Blanford*

Diplommatina nana, Blanford, J A. S. B. xxxiv, 1865, p. 85, Godwin-Austen, op cit xxxvii, 1868, p. 84, pl. 4, figs 4, 4 a, Theobald & Stoliczka, op cit xli, part 2, 1872, p. 331, Hauley & Theobald, Conch Ind 1875, pl. 140, fig. 1, Pfeiffer, Mon Pneum Suppl 3, 1875, p. 75, Theobald, Cat Shells Brit. India, 1876, p. 42, Nevill, Hand List, 1, 1878, p. 285, Godwin-Austen, Land & Freshw Moll India, 1, 1886, p. 181, pl. 49, figs 6, 6 a.

Diplommatina (Eudiplommatina) nana, Kobelt & Mollendorff, Nachr Deuts. Malak Ges. xxx, 1898, p. 137, id, Cat Pneum 1899, p. 57.

Diplommatina (Diplommatina) nana, Kobelt, Das Tierreich, Lief. 16, 1902, p. 439.

Original description:—"Shell not rimate, dextrorse, subovate, rather solid, amber coloured, very finely and closely spiriformly costulated on the lower whorls, less closely on the upper, or, frequently, subdistantly costulated throughout. Spire conical, with sides scarcely convex above, apex rather obtuse, sometimes reddish, suture impressed. Whorls 6-6½, rounded, antepenultimate the largest, the last rising considerably upon the penultimate. Aperture vertical, ear-shaped, nearly circular, columellar margin straight for a short distance and vertical, with an internal tooth. Peristome double, both portions expanded and appressed, the inner forming a thin callus upon the penultimate whorl. Operculum?"

"Length 2¼, diameter 1 millim. Aperture with peristome about ⅔ millim. in diameter" (*Blanford*).

Hab. Burma. Akowtong, Thondoung, and Yenangdoung, in Henzada District, Pegu (*Blanford*), near Moulmein (*Theobald*).

497 *Diplommatina nicobarica*, *Godwin-Austen*

Diplommatina canicola, var. (♂ distinct species), Nevill, Hand List, 1, 1878, p. 284 (part).

Diplommatina nicobarica, Godwin-Austen, Land & Freshw Moll India, 1, 1886, p. 185, pl. 46, figs 7, 7 a, id., Proc. Zool Soc. 1895, p. 454. id., Land & Freshw Moll India, 11, 1897, p. 16.

Diplommatina (Eudiplommatina) nicobarica, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57.

Diplommatina (Diplommatina) nicobarica, Kobelt, Das Tierreich, Lief. 16, 1902, p. 439.

Original description:—"Shell dextral, fusiform, not rimate, sculpture very close regular costulation, colour pale brown;

spire, sides rather flattened, apex acuminate; whorls 7, sides convex, the antepenultimate the broadest, the constriction usually immediately above the aperture, but in some inclining more to the outer margin, aperture circular, suboblique; peristome closely double, columellar margin straight, only a slight indication of the usual tooth, but the thread or twist of the columella is visible within the aperture

"Alt. axis 4.3 mm."

Hab Nicobars Katchall (*Roepstorff*).

"The absence of the usual columellar tooth is a conspicuous difference; it is the first species described from these islands." (*Godwin-Austen*)

In 1895 the following note was added:—

"This species is No 13 of Mr. G. Nevill's 'Amended Hand List' (p. 284) = *roepstorffiana*, Nevill MS., from Katchall (*de R.*).

"This species in Mr. de Roepstorff's collection bears the name of *D. carneola*, Stol., = *battemalvensis*, Nevill. In Nevill's 'Amended Hand List' I find the title *roepstorffiana* entered and the typical locality Katchall, with 3 specimens from Oumorta and 20 from Battemalve, collected by Feid Stoliczka. It is somewhat similar to *D. carneola* from Moulinain, but it is more elongate and the costulation much closer and finer." (*Godwin-Austen*)

Var. *battemalvensis*, *Godwin-Austen*.

Diplommatina carneola, var. (? distinct species), Nevill, Hand List, 1, 1873, p. 284 (part).

Diplommatina nicobarica, var. *battemalvensis* (Nevill MS.), Godwin-Austen, Proc Zool. Soc 1895, p. 454, id, Land & Freshw Moll India, ii, 1897, p. 18.

Diplommatina (*Eudiplommatina*) *nicobarica*, var. *battemalvensis*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 187, id, Cat. Pneum 1899, p. 57.

"I have discovered among some shells put up by Mr. G. Nevill two specimens in a tube, labelled as above, from the island of Batte Malve, they agree in all characters with the last species [*nicobarica*], but are much larger and more tumid, the antepenultimate whorl being much larger than in *nicobarica*.

"Major diam 1.3; alt. axis .3, body-whorl 0.9 mm" (*Godwin-Austen*)

Hab. Nicobars · Batte Malve (*Stoliczka*).

498. *Diplommatina oligopleuris*, *Blanford*.

Diplommatina oligopleuris, Blanford, J. A. S. B. xxvii, 1868, p. 82, pl. 3, figs 4 & c, Theobald & Stoliczka, op. cit. vii, part 2, 1871, p. 330 (*D. oligopleuris*), Hanley & Theobald, Conch. Ind. 1875, pl. 119, figs 2, 3, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 74, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand List, 1, 1878, p. 285 (+ var.), Godwin-Austen, Land & Freshw. Moll. India, i, 1886, pl. 50, fig. 1 (animal).

Diplommatina (Eudiplommatina) oligopleuris, Kobelt & Mollendorff, Nachr. Deutsch. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57.

Diplommatina (Diplommatina) oligopleuris, Kobelt, Das Tierreich, Lief. 16, 1902, p. 440.

Original description :—"Testa dextrorsa, non rimata, conico-ovata, costis distantibus obliquis ornata, fulvescenti-albida. Spira conica, apice obtuso, sutura impressa. Anfr. 6, rotundati, antepenultimus major, tumidiusculus, ultimus antice ascendens, subtus rotundatus. Apertura verticalis, late auricularis, plica columellari valida munita; perist. rectum, duplex, internum antice porrectum, expansulum, externum late expansum, margine columellari verticali, callo parietali mediocri.

"Long. 2, diam. vix $1\frac{1}{4}$ mill. Ap. c. perist. $\frac{3}{4}$ mill. longa."

Hab. India: Teria Ghat, Khasi Hills (*Godwin-Austen*)

"This is evidently a peculiar type. In some specimens the sculpture on the lower whorls appears to be more or less obsolete. The form is not unlike that of *polypleuris* and *austeni*, but it is easily recognised by its strong distinct costulation." (*Blanford*.)

499. *Diplommatina oviformis*, *Fulton*.

Diplommatina oviformis, *Fulton*, A. M. N. II. ser. 7, viii, 1901, p. 245.

Diplommatina (Diplommatina) oviformis, Kobelt, Das Tierreich, Lief. 16, 1902, p. 440.

Original description .—"Shell dextral, ovate, very pale yellow, sculptured with oblique, very close-set costæ; whorls $6\frac{1}{2}$, convex, the penultimate slightly wider than the last; aperture subcircular, peristome somewhat thickened, inner margin slightly raised; columella lip almost erect, slightly incurved at the middle, columella plate prominent.

"Alt. $2\frac{3}{4}$ millim.; diam. major $1\frac{1}{2}$ millim."

Hab. India: Darjeeling.

Fig. 36.—*Diplommatina oviformis* ($\times 4$)

"In general form very like *D. unguolata*, *Blanf.*, but without the peculiar projection on upper part of the peristome, which is almost circular in *D. oviformis*, whereas in *D. unguolata* it is angular at the basal portion and turned slightly outwards towards the left hand." (*Fulton*.)

The accompanying figure has been drawn from the type specimen in the British Museum.

500. *Diplommatina pachychilus*, Benson.

Diplommatina pachychilus, Benson, A M N H ser 2, xix, 1857, p 203, Theobald, J. A S B xlvii, 1858, p 323; Pfeiffer, Mon. Pneum. Suppl 1, 1858, p 10, Benson, A. Diplommatina (Diplommatina) parvula, Kobelt, Das Tierreich, Lief 16, 1902, p. 440

Original description — "Shell dextral, ovate, tumid, depressed, thin, colour bright corneous, pale in some specimens, translucent, finely yet sharply costulated throughout, spire oval, apex very flat, and blunt. Whorls 5, with sides very concave, enlarging rapidly from the apex, antepenultimate the largest, body whorl ascends slightly within a short distance of the peristome, suture deeply impressed; aperture circular with slight obliquity, columellar margin rounded, the usual tooth absent, peristome strong, well developed, double, both outer and inner lips expanded, the former to the greatest extent, the latter forming a thick parietal callus.

"Height 1½ mm., thickness 1 mm." (*Godwin-Austen.*)

Hab. India. Moyong, Khasi Hills (*Godwin-Austen*).

502 *Diplommatina polypleuris*, Benson.

Diplommatina polypleuris, Benson, A. M. N. H. ser. 2, xix, 1857, p. 203, Theobald, J. A. S. B. xxxvii, 1868, p. 318, Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p. 11, Godwin-Austen, J. A. S. B. xxxvii, 1868, p. 83, pl. 3, fig. 1, id., op. cit. xxvix, part 2, 1870, p. 4, pl. 1, figs. 4, 4a (var.), Theobald, op. cit. xli, part 2, 1872, p. 330, Hanley & Theobald, Conch. Ind. 1875, pl. 140, fig. 10, Theobald, Cat. Shells Brit. India, 1876, p. 42, Godwin-Austen, J. A. S. B. xlv, part 2, 1876, p. 178, var. *minuta* (nom. nud.), Nevill, Hand List, i, 1878, p. 285 (+ var.), Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 176, pl. 45, figs. 1, 1a
Diplommatina (Eudiplommatina) polypleuris, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57

Diplommatina (Diplommatina) polypleuris, Kobelt, Das Tierreich, Lief. 16, 1902, p. 441.

Original description :—"Testa dextrorsa, non rimata, oblongo-ovata, confertim oblique chordato-costulata, pallide carnea, apice obtusiusculo, hyalino, sutura profunda anfractibus 6 convexis, antepenultimo tumidiusculo, apertura verticali, subcirculari, dente columellari munita, peristomate duplici, interiori expansiusculo, externo expanso, ad basin sinistram angulato-rotundato, callo parietali mediocri, appresso Opeic. — ?

"Long. vix 2, diam. 1 mill." (Benson)

Hab. India. Nancloi Poonjee, Assam (*Theobald*), Dafia Hills (*Godwin-Austen*), var., North Khasi Hills (*Godwin-Austen*); Darjeeling (*Stoliczka*) Burina Nattoung, Sandoway (*Theobald*).

503. *Diplommatina pullula*, Benson.

Diplommatina pullula, Benson, A. M. N. H. ser. 3, iii, 1859, p. 182, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 9, Godwin-Austen, J. A. S. B. xxxvii, 1868, p. 83, pl. 1, fig. 7, Hanley & Theobald, Conch. Ind. 1875, pl. 119, fig. 7, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand List, i, 1878, p. 287, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 170, pl. 49, fig. 12

Diplommatina (Eudiplommatina) pullula, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57

Diplommatina (Diplommatina) pullula, Kobelt, Das Tierreich, Lief. 16, 1902, p. 441

Original description :—"Testa imperforata, ovato-turrita, oblique confertim costulata, fulvescenti-albida, versus apicem rubella, spira subturrita, sutura impressa, apice obtusiusculo; anfractibus 6-7 convexis, antepenultimo tumidiore, ultimo antice valde ascendente, costulis remotioribus irregularibus, apertura subverticali, vix superne spectante, oblique obovali, peristomate duplici, interno porrecto expansiusculo, externo subreflexo, marginibus callo appresso expanso junctis, columellari verticali planato

intus acute unidentato basi angulato-rotundato, dextrali valde arcuato Operc —?

"Long. 3, diam. $1\frac{1}{4}$ mill"

Hab. India: Kungun Valley (*Blanford*), Darjeeling (*Blanford*, *Stoliczka*, *Mann* *et* *Wing*).

"In form and size between *huttoni* and *folliculus*, Pfr.; dextrorse like the latter, though agreeing with the former in having the tooth apparent on the columellar lip. The tooth is as strong, in comparison with the size of the shell, as in the other more eastern species of the North Indian ranges. The more considerable rise of the last whorl on the penultimate is a feature also observable in the large *Dipl. macgillivrayi*, Adams. The columellar base is deficient in the sharp angle observable in the larger Khasia *diplocheilus* and Darjiling *pachycheilus*; and its elongate sub-turritid form at once distinguishes it from *polypleuris*." (*Benson*.)

504. *Diplommatina pupæformis*, *Theobald*.

Diplommatina pupæformis, Theobald, J. A. S. B. xxix, part 2, 1870, p. 398, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 84, Hanley & Theobald, Conch. Ind. 1876, p. xii, Theobald, Cat. Shells Brit. India, 1876, p. 42, Godwin-Austen, Land & Freshw. Moll. India, 1, 1886, p. 182, pl. 46, figs. 4, 4a.

Diplommatina sakumana, var. *pupæformis*, Nevill, Hand. List, 1, 1878, p. 285.

Diplommatina (Eudiplommatina) pupæformis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57.

Diplommatina (Diplommatina) pupæformis, Kobelt, Das Tierreich, Lief. 16, 1902, p. 442.

Original description—"Testa sinistrorsa, oblongo ovali, non rimata, pallidissime cornea, sutura impressa; anfract. 7, regulariter crescentibus, transversaliter confertim striatis, apertura subcirculari, margine columellari brevi, recto, dente columellari modico instructo, labro duplici, margine externo expanso.

"Long. 0.16 [4 mm.], lat. 0.08 unc. [2 mm.]." (*Theobald*.)

Hab. Burma: Shan States (*Fedden*).

505. *Diplommatina puppensis*, *Blanford*.

Diplommatina puppensis, Blanford, J. A. S. B. xxxii, 1863, p. 324, id., A. M. N. H. ser. 3, xiii, 1864, p. 443 (*pappensis*), Godwin-Austen, J. A. S. B. xxxvii, 1868, p. 84, pl. 4, figs. 2, 2a, Hanley & Theobald, Conch. Ind. 1875, pl. 139, figs. 8, 9, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 75, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand. List, 1, 1878, p. 284, Godwin-Austen, Land & Freshw. Moll. India, 1, 1886, p. 180.

Diplommatina (Eudiplommatina) puppensis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57.

Diplommatina (Diplommatina) puppensis, Kobelt, Das Tierreich, Lief 16, 1902, p 442

Original description.—"Shell dextral, not rotate, elongately subovate, thin translucent, light amber in colour, very finely and closely costulated, spire with convex sides, apex pointed, not acuminate, suture impressed. Whorls 7, the antepenultimate being the largest, last whorl rising considerably upon the penultimate. Aperture vertical, nearly circular, the columellar margin being straight, with an obtuse angle at the base, and furnished with a small tooth internally. Peristome double, orange in colour, both lips expanded, the inner forming a thin callus upon the penultimate whorl. Operc. thin, horny, white, circular, flat, with no distinct spiral sculpture.

"Alt. $3\frac{1}{2}$, diam. 2, diam. ap 1 mm."

Hab. Burma. Puppia Hill, Ava (*Blanford*)

"The largest species yet discovered in Burma and the most symmetrical, so far as I know, of all Asiatic forms. None of the Burmese representatives of *Diplommatina* shew the strongly acuminate spire, or the great swelling of the antepenultimate whorl which distinguishes the species inhabiting the Himalaya." (*Blanford*)

506. *Diplommatina regularis*, *Fulton*.

Diplommatina regularis, *Fulton*, A. M. N. H. ser. 7, viii, 1901, p. 245

Diplommatina (Diplommatina) regularis, Kobelt, Das Tierreich, Lief. 16, 1902, p 442

Original description—"Shell dextral, ovate-conic, imperforate, creamy white, ornamented with very distinctly raised, thin,

Fig 37—*Diplommatina regularis* ($\times 4$)

oblique costæ; whorls 7, very convex, first five regularly increasing in diameter, last two about equal, aperture circular, peristome slightly expanded, double; columella plate rather deeply inserted

"Alt. $2\frac{1}{2}$ millim., diam major 1 millim."

Hab. India Darjeeling.

"I know of no Indian species nearer to this than *D. pullula*, Bens., which is smaller and has closer and much less prominent costæ" (*Fulton*.)

The specimen here delineated is the type in the British Museum.

507. *Diplommatina richthofeni*, Theobald & Stoliczka.

Diplommatina richthofeni, Theobald & Stoliczka, J. A. S. B. xi, part 2, 1872, p. 331, pl. 11, figs 4, 4a, 4b, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 78, Hanley & Theobald, Conch. Ind. 1876, pl. 141, figs 7, 8, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand List, i, 1878, p. 285.

Diplommatina (Eudiplommatina) richthofeni, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 137, id., Cat. Pneum. 1899, p. 57.

Diplommatina (Diplommatina) richthofeni, Kobelt, Das Tierreich, Lief. 16, 1902, p. 443.

Original description.—"Dipl. testa ovate elongata, turrata, dextrorsa, albida, rimata, spina conoidea, anfractibus septem, convexis, ad medium subangulatis, sutura simplici junctis, penultimo ultimo latiore primis duobus apicem formantibus lævigatis, cæteris transversim conferte costellatis, ultimo basi convexo, angustato, supra ad anf. penultimum ascendente. apertura parva, cuculari, peristomate duplici. interno tubuliformi modice producto atque dilatato; labio ad basin dente obliquo et magno instructo.

"Long. 2.5, lat. maxima 0.8 diam. aperturæ 0.5 mm."

Hab. Burma. Farn Caves, Moulemein (*Theobald*).

"A species closely allied to *D. angulata*, but more slender, with less distinctly angulated whorls, non-mammillated apex, with a slightly more distant costulation and with a comparatively smaller aperture." (*Theobald & Stoliczka*.)

508. *Diplommatina saltuensis*, Godwin-Austen.

Diplommatina saltuense, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 178, pl. 45, figs 6, 6a.

Diplommatina (Eudiplommatina) saltuensis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 138, id., Cat. Pneum. 1899, p. 58.

Diplommatina (Diplommatina) saltuensis, Kobelt, Das Tierreich, Lief. 16, 1902, p. 444.

Original description.—"Shell dextral, not rimate, umbilicated, ovately fusiform; sculpture distant, strong costulation on all the whorls; colour ruddy ochre, strong on apex; spire conic acuminate, sides flat near apex, which is rather pointed; whorls $6\frac{1}{2}$, the three last much rounded, the antepenultimate the largest, the constriction in middle above the aperture, aperture circular, perpendicular, peristome very solid, double; columellar margin straight, the tooth pointed.

"Major diam. 1.4, alt. axis 2.4 mm."

Hab. India. Jatinga Valley, North Cachar Hills.

"This species, which assimilates in general form to *D. polypleuris* &c., yet differs considerably in the attenuation of the apex and proportion of the whorls, being more like in this respect *D. daflensis*." (*Godwin-Austen*.)

509. *Diplommatina salwiniana*, *Theobald*.

Diplommatina salwiniana, Theobald, J S A B xxxix, part 2, 1870, p 398, Pfeiffer, Mon Pneum Suppl. 3, 1875, p 84, Hanley & Theobald, Conch Ind 1876, p. xii, Theobald, Cat Shells Brit India, 1876, p 42 (*salwiniana*), Nevill, Hand List, 1, 1878, p 285.

Diplommatina (*Eudiplommatina*) *salwiniana*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p 138, id., Cat. Pneum. 1899, p 58.

Diplommatina (*Diplommatina*) *salwiniana*, Kobelt, Das Tierreich, Lief. 16, 1902, p 444

Original description:—"Testa sinistrorsa, ovate turrita, non rimata, pallidissime flavescens, sutura impressa, anfractibus $7\frac{1}{2}$, convexis, regulariter crescentibus, transversim distincte striatis, stris in ult anfractu magis distantibus, apertura rotundate ovata, margine columellari recto, dente parvo submediano instructo, margine externo uniforme curvato, tenuiter calloso

"Long 0.20 [5 mm.], lat. 0.10 unc [2.5 mm.]." (*Theobald*)

Hab. Shan States (*Fedden*)

510. *Diplommatina scalaria*, *Blanford*.

Diplommatina scalaria, Blanford, J. A S B. xxxvii, part 2, 1868, p 79, pl. 2, fig 2, Hanley & Theobald, Conch Ind 1875, p. 65 (*scalaris*), pl 139, figs 2, 3, Pfeiffer, Mon Pneum Suppl 3, 1875, p. 72, Theobald, Cat Shells Brit. India, 1876, p 42, Nevill, Hand List, 1, 1878, p 286

Diplommatina (*Eudiplommatina*) *scalaria*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 138, id., Cat Pneum 1899, p 58

Diplommatina (*Diplommatina*) *scalaria*, Kobelt, Das Tierreich, Lief 16, 1902, p 444.

Original description:—"Testa dextrorsa, non rimata, ovato-acuminata, subfusiformis, costulis validis verticalibus distantibus ornata, pallide succinea. Spira conica, subturrita, apice subacuto, sutura valde impressa. Anf. 7 rotundati, duo primi lævigati, tertius confertum—, cæteri distanter—costulati, antepenultimo major, tumidus, ultimus versus aperturam ascendens, basi rotundatus. Apertura subverticalis, leviter sursum spectans, late auricularis, plica columellari mediocri intus munita perist. duplex, internum continuum, expansum, externum expansum, fere retro-relictum, margine dextro juxta anfractum penultimum sinuato, tunc angulatum antice porrecto, subtus una cum basali recto, columellari verticali, subtus angulo obtuso desinenti, callo parietali expanso, superne suturam fere attingente.

"Long. $3\frac{1}{2}$, diam. 2 mill. Apertura c. peristomate vix $1\frac{1}{2}$ mill. longa, diam. intus circa $\frac{2}{3}$." (*Blanford*.)

Hab India Habiang, Garo Hills (*Godwin-Austen*)

This species is said in shape to approach the Darjeeling *D. blanfordiana*, Bens., but may be easily distinguished by the distant and prominent sculpture.

511. *Diplommatina scalaroidea*, Theobald.

Diplommatina scalaroidea, Theobald, J A S B xxxix, part 2, 1870, p 399, pl 18, figs 5, 5 a, 5 b, Pfeiffer, Mon Pneum Suppl. 3, 1875, p 80, Hanley & Theobald, Conch Ind 1876, p 56 (*scalaroides*), pl 141, fig. 10, Theobald, Cat Shells Brit India, 1876, p 42, Nevill, Hand List, 1, 1878, p 285

Diplommatina (Eudiplommatina) scalaroidea, Kobelt & Mollendorff, Nachr. Deuts. Malak Ges. xxv, 1898, p 138, id, Cat Pneum 1899, p 58

Diplommatina (Diplommatina) scalaroidea, Kobelt, Das Tierreich, Lief 16, 1902, p 445

Original description —“Dipl. testa ovato turrata, sinistrorsa, albida, solidula, non rimata, apice subobtusa, anfractibus 7, convexis, sutura profunda junctis, antepenultimo latissimo, penultimo supra aperturam sensim constricto; anfr. primis duobus ad apicem lævigatis, ceteris costulis transversis, sub-obliquis, distantibus, filiformibus ornatis, interspacis politis; apertura late ovato-rotundata, labio lateraliter incrassato, supra producto, adnato, medio tenuissimo, columella plica valida et infra eam incisione profunda instructa; labro duplici, incrassato, paulo dilatato, intus lævi, extra paulo reflexiusculo, prope medium insinuato

“Alt testæ 0.2 [5 mm.], lat. max. 0.1 [2.5 mm.], alt. apert. 0.07 [1.75 mm.], lat. apert. circ. 0.06 [1.5 mm.]”

Hab Burma Mandalay (*Theobald, Stoliczka*)

“A very marked type of the sinistrorse *Diplommatina*, somewhat allied to the Assamese *D. jaintica*, G.-Austen, but readily distinguished from it by its more turrit shape, and by the deep incision below the columellar fold.” (*Theobald.*)

512. *Diplommatina semisculpta*, Blanford.

Diplommatina semisculpta, Blanford, J. A. S. B. xxxvii, part 2, 1868, p 78, pl. 1, fig 6, Hanley & Theobald, Conch Ind 1875, pl 120, fig 7, Pfeiffer, Mon. Pneum Suppl 3, 1875, p 71, Godwin-Austen, J A S B xlv, part 2, 1876, p 178, Theobald, Cat Shells Brit India, 1876, p 42, Nevill, Hand List, 1, 1878, p. 287.

Diplommatina (Eudiplommatina) semisculpta, Kobelt & Mollendorff, Nachr. Deuts. Malak Ges. xxv, 1898, p. 138, id, Cat Pneum. 1899, p. 58.

Diplommatina (Diplommatina) semisculpta, Kobelt, Das Tierreich, Lief 16, 1902, p 445.

Original description —“Testa dextrorsa non rimata, ovato-conica, solidiuscula, albida vel succinea. Spira conica, subattenuata, apice acutiusculo, sutura superne mediocriter impressa, subtus profunda. Anfr. 7 convexi, primum costulati, postremi lævigati, antepenultimus major, ventricosus, penultimus juxta aperturam leviter constrictus, ultimus antice ascendens, subtus rotundatus. Apertura verticalis late auricularis, peristoma incrassato-expansum,

subduplex vel duplex, margine dextro subrecto, columellari sinuato, angulo saliente subtus desinente basali juxta angulum fere concavo, dente columellari valida, callo parietali mediocriter expanso, tenui, appresso

"Long. 4, diam. 2 mill ; ap. cum peristomate $1\frac{1}{2}$ mill longa, intus 1 lata."

Hab. India. Darjeeling (*Blanford, Stoliczka, Mainwaring*), Dafia Hills (*Godwin-Austen*)

"This shell is easily distinguished from its congener *D. pachycheilus*, Bens, by the greater tenacity of the antepenultimate whorl, the absence of sculpture on the lower whorls and the more prominent angle at the left lower corner of the peristome. This last character in *D. semisculpta* is rather stronger than appears in the figure. The present species is much more closely allied to *D. dylocheilus*, Bens, which it resembles greatly in sculpture and form. The principal distinction is in the peristome which is much less developed in *D. semisculpta*, the parietal callus being quite thin and appressed instead of standing out from the last whorl as in that species. The mouth also is larger in proportion, the angle at the base of the columellar margin more salient, and the spire more acuminate." (*Blanford.*)

513. *Diplommata sherfaensis*, *Godwin-Austen*.

Diplommata sherfaensis, Godwin-Austen, J. A. S. B. xxxiv, part 2, 1870, p. 3, pl. 1, fig. 3, Hanley & Theobald, Conch Ind. 1875, pl. 119, fig. 8, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 76, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand List, i, 1878, p. 286

Diplommata (Eudiplommata) sherfaensis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 138, id., Cat. Pneum. 1899, p. 58

Diplommata (Diplommata) sherfaensis, Kobelt, Das Tierreich, Lief. 16, 1902, p. 446

Original description.—"Shell dextral, ovate, fusiform, sub-rotate, thin rubescent straw colour, diaphanous, sculpture very fine, close, filiform, shewing well on all the whorls, spire with sides slightly convex, apex subacuminate, conic, whorls 6, convex, penultimate and ante-penultimate of very nearly the same size, the former being slightly the largest and more tumid, last whorl constricted in front of peristome above the aperture, ascending, aperture sub-vertical, columellar margin much rounded, the tooth very small, and in some old specimens is hardly to be detected. peristome thin, double and close, the outer very slightly expanded, the inner distinctly so, continuous, forming a thin broad parietal callus. Animal not observed

"Height 3 mm, diameter $1\frac{1}{2}$ mm; diameter of aperture $\frac{3}{4}$ mm" (*Godwin-Austen.*)

Hab. India. Cachar Hills, Sherfaip and Maingksi Peaks (5500 ft) (*Godwin-Austen*).

Stated to resemble *D. puppensis*, Blanford, in form and size, but readily distinguished by its fine close costulation, by the roundness of the aperture and the thinness of the peristome.

514. *Diplommantina silvicola*, Godwin-Austen.

Diplommantina silvicola, Godwin-Austen, Land & Freshw. Moll India, 1, 1886, p. 178, pl. 46, figs 3, 3a, (var.) figs 5, 5a

Diplommantina (Eudiplommantina) silvicola, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xx, 1898, p. 138, id., Cat. Pneum. 1899, p. 58.

Diplommantina (Diplommantina) silvicola, Kobelt, Das Tierreich, Lief. 16, 1902, p. 446

Original description —“Shell somewhat depressedly ovate, not rimate; sculpture, regularly well-marked distant costulation; colour pale sienna-brown; spire conic, sides convex, apex rather blunt; whorls 6, rounded, the last rather small, penultimate the most swollen, constriction in middle and above the aperture, aperture vertical, circular. peristome double and solid, columellar margin subvertical, tooth strong

“Major diam. 1.3, alt. axis 2.2 mm.”

Hab India: Janta Ilajuma Peak (5127 ft.), North Cachar (Godwin-Austen)

“I obtained only six specimens of this shell, in the dense lofty forest of the highest part of the North Cachar Hills. It approaches *D. austeni* in its general form, but is more depressed, and its sculpture is very defined.” (Godwin-Austen)

A dwarf form, measuring only 1.7 mm. in height, was also found in the Jatinga Valley, North Cachar Hills

515 *Diplommantina sperata*, Blanford

Diplommantina sperata, Blanford, J. A. S. B. xxxi, 1862, p. 143, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 10, Godwin-Austen, J. A. S. B. xxvii, 1868, p. 84, pl. 4, figs 1, 1a; Theobald, op. cit. vi, part 2, 1872, p. 330, Hanley & Theobald, Conch. Ind. 1876, p. xii, Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Land List, 1, 1878, p. 284, Godwin-Austen, Land & Freshw. Moll. India, 1, 1886, p. 179, pl. 46, figs 5, 5a.

Diplommantina (Eudiplommantina) sperata, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 138, id., Cat. Pneum. 1899, p. 58

Diplommantina (Diplommantina) sperata, Kobelt, Das Tierreich, Lief. 16, 1902, p. 446.

Original description —“Testa dextrorsa, non rimata, ovato-conica, subfusiformis, solidiuscula, pallide cornea, subremote verticaliter costulata. Spira conica, apice acuta, sutura impressa. Anfr. 6½ convexi, antepenultimus major, tumidus; ultimus antice vix ascendens. Apertura verticalis, subtus antice sinuata, late auricularis, plica columellari valida munita, perist. subduplex

expansum, margine columellari sinuato et ad basin angulo acuto desinente, callo parietali mediocri.

"Long. $2\frac{1}{2}$, diam. $1\frac{1}{2}$, ap diam. $\frac{1}{2}$ mm "

Hab. Burma. Moditoung, Aikan Hills, Pegu (*Blanford*), Mai-i, Sandoway District (*Theobald*).

"But two perfect specimens of this shell occurred to me at Moditoung on the Prome and Tongoop road . . . It resembles *D. pachycheilus*, B, in the shape of the mouth, but is distinguished by the slighter rise of the last whorl, and by its subremote costulate sculpture, which, together with its less rounded aperture, serves also to distinguish it from *D. diplocheilus*, B, *D. pullula*, B, and *D. blanfordiana*, B the two latter of which are costulated, and the first named smooth." (*Blanford*)

516. *Diplommatina succinea*, Godwin-Austen

Diplommatina succinea, Godwin-Austen, Proc Zool. Soc 1892, p. 519, id, Land & Freshw Moll India, II, 1897, p. 15, pl. 66, fig 9.

Diplommatina (Diplommatina) succinea, Kobelt, Das Tierreich, Lief 16, 1902, p 447

Original description.—"Shell dextral, tumidly fusiform, thin and delicate in texture, sculpture, regular, rather close costulation; colour very pale amber, with stronger coloration on the apex, spire somewhat depressed, suture impressed, whorls 6, tumid, with convex sides, constriction above the aperture, aperture oval, vertical, columellar tooth only indicated by a slight swelling, peristome double, strong

"Major diam 1.3, alt. axis 2 millim "

Hab. India. Anghami-Naga Hills (*Godwin-Austen*)

"This minute species may be compared with *D. parvula* from the N Khasi Hills, from which it differs in being larger, and in having a greater number of whorls and a much more tumid shape" (*Godwin-Austen*)

517. *Diplommatina theobaldi*, Godwin-Austen.

Diplommatina (Eudiplommatina) theobaldi, Kobelt & Mollendorff, Nachr Deuts Malak Ges xxx, 1898, p 138, id, Cat Pneum 1899, p 58

Diplommatina (Diplommatina) theobaldi, Kobelt, Das Tierreich, Lief 16, 1902, p. 447.

Original description —"Shell sinistral, globosely scarcely rimate, constriction central, above the aperture ovate, somewhat gibbous; sculpture smooth, with rather close costulation, high and sharp near aperture, colour pale amber, spire bluntly conoid, apex obtuse, suture moderately impressed, whorls 5, sides flat in front, rounded at back, aperture subvertical, oval, peristome

double, not continuous; columellar margin curved, no tooth visible viewed from the front, but seen slightly well within the aperture.

"Major diam. 1.4, alt. axis 2.3 mm."

Hab India: Darjeeling (*Theobald*).

"This interesting sinistral species, the first I have seen from the Darjeeling Hills, is another similar to *D. jayntiaca* of the mountains south of the Brahmaputra, but differs in many respects, particularly in its tumid small size and the absence of the columellar tooth." (*Godwin-Austen*.)

518 *Diplommatina tumida*, *Godwin-Austen*.

Diplommatina tumida, *Godwin-Austen*, J. A. S. B. xxxix, part 2, 1870, p. 6, pl. 2, fig. 2; *Hanley & Theobald*, *Conch. Ind.* 1875, pl. 139, fig. 1, *Pfeiffer*, *Mon. Pneum. Suppl.* 3, 1875, p. 71, *Theobald*, *Cat. Shells Brit. India*, 1876, p. 42, *Nevill*, *Hand List*, 1, 1878, p. 286.

Diplommatina (*Eudiplommatina*) *tumida*, *Kobelt & Mollendorff*, *Nachr. Deuts. Malak. Ges.* xxx, 1898, p. 138, id., *Cat. Pneum.* 1899, p. 58.

Diplommatina (*Diplommatina*) *tumida*, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p. 447.

Original description — "Shell dextral, ovately and tumidly fusiform, color pale corneous, or pale green; costulation fine and close throughout, spire attenuate, rather pointed. Whorls 8, lower tumid, sides rounded below, flat above, penultimate the largest; suture impressed, — a well marked constriction of penultimate whorl situated close behind the peristome, last whorl rises slightly on the penultimate; aperture vertical, circular, columellar margin rather straight, tooth large; peristome double, moderately thickened and continuous, forming a callus on the penultimate.

"Height 0.23 [5.75 mm.]; diam. 0.13 [3.25 mm.]; diam. of ap. with peristome 0.07 [1.75 mm.]" (*Godwin-Austen*.)

Hab India Burrair Range, near Nenglo, N. Cachar Hills (*Godwin-Austen*).

Stated to be closely allied to *D. pachychilus*, *Benson*, and to partake also somewhat of the character of *D. blanfordiana*, but it is more tumid, while the position of the constriction separates it well from both those species.

Var. *addita*, nom. nov.

Diplommatina tumida, var., *Godwin-Austen*, J. A. S. B. xlv, part 2, 1875, p. 9, pl. 4, figs. 7, 7 a.

Original description — "Shell elongately fusiform, thin, pale yellowish green, sculpture very faint above, quite smooth on the 3 last whorls, spire attenuate, sides flat, suture moderate; whorls $8\frac{1}{2}$ to 9, the antepenultimate the largest, constriction in front,

above the aperture, last whorl ascends slightly; aperture oval, vertical, peristome double, thickened, slightly reflected, columellar tooth small and remote.

"Alt. 0.22 [5.5 mm], diam. 0.13 in. [3.25 mm]

Hab. India. Kezakenomih, Naga Hills (*Godwin-Austen*).

"This shell is a better type of this form of *Diplommatina* than the very tumid shell first described from Asalu; the form changes much in different localities, in some being much more solid and more distinctly and distantly sculptured near the apex; a variety from the Eastern Burrell is 0.20" in alt., rich dark amber coloured, has the 3 lower whorls smooth and glassy, the columellar tooth still more remote, and the constriction just behind the peristome; it departs so widely from the original type that it might almost be separated." (*Godwin-Austen*)

Var. *laisenensis*, nom. nov.

Diplommatina tumida, var., *Godwin-Austen*, Proc. Zool. Soc. 1892, p. 512; id., Land & Freshw. Moll. India, II, 1897, p. 7, pl. 64, fig. 7.

Original description — "Shell dextral, elongately fusiform, not rimate; sculpture, fine costulation on the 5 apical whorls, the last smooth; colour pale greenish; spire with convex sides, apex acuminate, suture well impressed; whorls $7\frac{1}{2}$, penultimate and antepenultimate equal, constriction above the aperture, but towards the right-hand side, aperture oval, vertical, peristome thickened, double, columellar margin straight and angulate below, the tooth in front, moderately large.

"Major diam. 2.4; alt. axis 5 millim." (*Godwin-Austen*)

Hab. Burma: Laisen Peak and Nongmaiching Trigonometrical Station, Manipur.

519. *Diplommatina unguata*, *Blanford*.

Diplommatina unguata, *Blanford*, J. A. S. B., XI, 1871, p. 42, pl. 2, figs 5, 5a, *Hanley & Theobald*, Conch. Ind. 1875, pl. 120, fig. 10, *Pfeiffer*, Mon. Pneum. Suppl. 3, 1875, p. 78, *Theobald*, Cat. Shells Brit. India, 1876, p. 42, *Nevill*, Hand. List, I, 1878, p. 287.

Diplommatina (*Eudiplommatina*) *unguata*, *Kobelt & Mollendorff*, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 138, id., Cat. Pneum. 1899, p. 58.

Diplommatina (*Diplommatina*) *unguata*, *Kobelt*, Das Tierreich, Lief. 16, 1902, p. 448.

Original description. — "Testa dextrorsa, ovato-conica, subrimata, tenuis, costulata, cereo-albida. Spira superne conica; sutura impressa; apex obtusulus. Anfractus 7, duo primi lævigata, ceteri confertim costulati, antepenultimus major, tumidus; penultimus supra aperturam constrictus, ultimus valde ascendens, ad basin rotundatus. Apertura subobliqua, subquadrata; plicæ columellaris mediocris. Peristoma subduplicatum, margine dextro

evertato, juxta suturam sinuatum, in expansionem angustam unguiformem, antice productum; subtus rectum. Callus columellaris late appressus.

"Alt. 3 mm; diam vix 2 mm.—Aperturæ alt. 1 mm., lat. 1 mm."

Hab. India Darjeeling (*Blanford, Stolletzka*).

"The only species yet described that presents anything resembling the peculiar conformation of the lip exhibited by this species is the rare *D. scalaria*, W. Blanford, from the Khasi Hills, and it is scarcely discernible in some specimens even of this species, which moreover presents no other point of marked resemblance. In all the specimens I have seen of *D. unguolata*, it is strongly marked; in some, however, more so than in others. . . . The animal is white, with the tentacles dusky and the upper part of the rostrum reddish coloured." (*Blanford*.)

520. *Diplommatina venustula*, Godwin-Austen

Diplommatina venustula, Godwin-Austen, Proc Zool Soc. 1892, p. 518; id, Land & Freshw Moll. India, II, 1897, p. 14, pl. 66, figs 7, 7 a

Diplommatina (Eudiplommatina) venustula, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1897, p. 138; id, Cat. Pneum. 1899, p. 58

Diplommatina (Diplommatina) venustula, Kobelt, Das Tierreich, Lief. 16, 1902, p. 448

Original description:—"Shell dextral, elongately fusiform, thin, sculpture, fine, regular, close costulation throughout, colour pale amber, spire high, sides flattish, apex acuminate; suture impressed; whorls $7\frac{1}{2}$, sides convex, the penultimate the largest; constriction in front above the aperture; aperture widely ovate, suboblique, peristome but slightly developed, narrowly double, expanded into a small wing on the upper and outer margin, giving it a very sinuated margin; no columellar tooth.

"Major diam 2 l; alt. axis 4 millim."

Hab. India Japvo Peak, Anghami-Naga Hills (*Godwin-Austen*)

"This species, of which I only obtained 3 specimens, is quite distinct, as shown in the form of the spire and particularly the expanded side of the peristome, which is an unusual character." (*Godwin-Austen*.)

Subgenus *METADIANCTA*, Mollendorff.

Metadiancta, Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 98 (section), Kobelt & Mollendorff, tom cit. p. 138 (subgenus), id, Cat. Pneum. 1899, p. 58; Kobelt, Das Tierreich, Lief. 16, 1902, p. 440.

TYPE, *Diplommatina dohertyi*, Godwin-Austen.

Range Assam and Manipur.

Constriction at the last third of the penultimate whorl, no parietal folds.

521. *Diplommatina compacta*, Godwin-Austen.

Diplommatina compacta, Godwin-Austen, Proc. Zool. Soc 1892, p. 515, id., Land & Freshw Moll. India, II, 1897, p. 11, pl. 65, figs 7, 7 a, 7 b

Diplommatina (Metadraneta) compacta, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 138, id., Cat. Pneum. 1899, p. 58; Kobelt, Das Tierreich, Lief. 16, 1902, p. 449.

Original description :—"Shell dextral, small, tumidly fusiform; sculpture, the two apical whorls smooth, two next with fine close ribbing, the last three whorls smooth or glassy; colour pale ochraceous white, spire, sides rather flat, apex moderately blunt, suture slightly impressed; whorls $7\frac{1}{2}$, the antepenultimate the largest and tumid, constriction on the side, well behind the aperture, at about 1 millim distant, aperture oval, vertical, peristome double; columellar tooth large in front, and directed downwards.

"Major diam. 1.8; alt. axis 3.5 millim."

Hab. Burma south of Barak, Manipur (*Godwin-Austen*)

"A larger shell, with rather a different shaped spire 4 millim. in height, was found at Asalu, with the constriction in the same position.

"It is an allied form of *D. jatungana*, from the North Cachar Hills, which is a larger, more tumid species with the constriction farther behind the aperture.

"A single specimen, only 3 millim. in height, was sorted out of the box containing *D. chennelli*, from the Lhota-Naga Hills." (*Godwin-Austen*)

522. *Diplommatina distincta*, Godwin-Austen

Diplommatina distincta, Godwin-Austen, Proc. Zool. Soc. 1892, p. 514, id., Land & Freshw Moll. India, II, 1897, p. 10, pl. 65, figs 4, 4 a, 4 b.

Diplommatina (Metadraneta) distincta, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 138; id., Cat. Pneum. 1898, p. 58; Kobelt, Das Tierreich, Lief. 16, 1902, p. 449.

Original description :—"Shell dextral, small, rather depressedly fusiform; sculpture very fine close ribbing; colour pale horny, spire conoid; apex blunt, suture impressed, whorls 7, sides convex, the antepenultimate the largest; constriction on the side, well behind the aperture, aperture vertical, irregularly ovate, peristome thin; columellar tooth very large for size and in front.

"Major diam 2; alt axis 3.4 millim."

Hab. India north of Burraol Range, Naga Hills (*Godwin-Austen*).

"There is only one specimen of this species, but it is very different from any of the smaller forms in having the constriction behind the aperture, and, for so small a shell, in having the columellar tooth so large" (*Godwin-Austen*.)

523 *Diplommatina dohertyi*, *Godwin-Austen*.

Diplommatina dohertyi, Godwin-Austen, Proc Zool Soc 1892, p 513, id., Land & Freshw. Moll India, 11, 1897, p 9, pl. 65, figs 1, 1 a

Diplommatina (Metadianta) dohertyi, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p 138, id., Cat. Pneum. 1899, p 58, Kobelt, Das Tierreich, Lief. 16, 1902, p 450, fig. 98

Original description.—"Shell dextral, very tumidly fusiform, strong, not rimate, sculpture fine rather distant costulation on all the whorls; colour very pale with a pinkish tint or ochraceous, spire, sides flat, rapidly diminishing, apex acuminate, suture impressed, whorls 8, last 3 whorls with convex sides, the penultimate the largest, constriction on side, well behind the aperture, the last whorl rises near peristome, aperture nearly circular, subvertical, rounded below; peristome double, outer somewhat reflected, and sinuous on margin, columellar tooth small, blunt, situated within the aperture, in many specimens it is not seen when viewed directly in front

"Major diam 3, alt. axis 6.4 millim." (*Godwin-Austen*)

Hab India: Margarita, Upper Assam (*Doherty*).

524 *Diplommatina jayvoensis*, *Godwin-Austen*

Diplommatina sheifarensis, var., Godwin-Austen, J. A. S. B. xlv, part 2, 1875, p 9, pl. 4, fig. 5.

Diplommatina jayvoensis, Nevill, J. A. S. B. 1, part 2, 1881, p 150 (nom. nud.), Godwin-Austen, Proc. Zool. Soc. 1892, p. 516, id., Land & Freshw. Moll India, 11, 1897, p 12, pl. 66, figs 11, 11 a

Diplommatina (Metadianta) jayvoensis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p 138, id., Cat. Pneum. 1899, p 58, Kobelt, Das Tierreich, Lief. 16, 1902, p. 450

Original description.—"Shell dextral, fusiform, thin texture; colour pale ochraceous; spire conic, apex blunt, suture moderately impressed; whorls $7\frac{1}{2}$, sides convex, swollen below, constriction in front, towards the outer margin of the peristome; aperture oval, vertical; columellar tooth fairly developed, blunt, peristome closely double, of weak structure.

"Major diam. 2.4; alt. axis 3.8 millim."

Hab India: Jayvo Peak, Aughami-Naga Hills, 10,000 ft. (*Godwin-Austen*).

"This is larger than the other species from this peak and elevation." (*Godwin-Austen*).

525 *Diplommatina khunhoensis*, *Godwin-Austen*.

Diplommatina khunhoensis, Godwin-Austen, Proc. Zool. Soc. 1892, p 515, id., Land & Freshw. Moll India, 11, 1897, p. 10, pl. 65, figs. 3, 3 a

Diplommatina (Metadianta) khunhoensis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p 138, id., Cat. Pneum. 1899, p 58, Kobelt, Das Tierreich, Lief. 16, 1902, p. 450.

Original description.—"Shell dextral, ovately fusiform, not

rimate, sculpture, fine regular costulation on the 3rd, 4th, and 5th whorls, the 2 apical smooth, the last whorls polished and glassy, colour pale sienna; spire, side flattened near the apex, which is somewhat acuminate, suture impressed, whorls 8, the antepenultimate the largest; constriction behind the aperture on the penultimate whorl, aperture oval and vertical; peristome double, strong, continuous, columellar tooth well developed, rather remote.

"Major diam. 2.2, alt. axis 4.8 to 5.2 millim."

Hab. India: Khamho Peak and Trigonometrical Station, 8800 ft above the Mao villages, Naga Hills (*Godwin-Austen*)

"A form rather longer and less swollen occurs in the same range, about 30 specimens were obtained at Gnameh Peak (5585 ft.), near the Barak River

"There is another form much smaller, being only 3.5 in length, with the same glassy whorls and the constriction rather further back, behind the aperture. Examples of this were also found at Sikkamh, in the Lahupa-Naga Hills. I distinguish this variety as *khamhoensis*, var. *minor*." (*Godwin-Austen*.)

526 *Diplommatina lapillus*, *Godwin-Austen*

Diplommatina lapillus, Godwin-Austen, Proc Zool Soc 1892, p. 515, id, Land & Freshw. Moll India, II, 1897, p. 11, pl. 65, figs. 6, 6a.

Diplommatina (Metadumacta) lapillus, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 139, id, Cat. Pn. 1899, p. 59, Kobelt, Das Tierreich, Lief. 16, 1902, p. 450

Original description — "Shell dextral, elongately fusiform, tumid below, not rimate; sculpture fine, regular, close costulation, which is often much worn down; colour (bleached), spire with sides flattened, apex acuminate, suture shallow, constriction of the penultimate whorl on the side, well behind the aperture, aperture oval, subvertical; peristome thickened, double, rounded below, columellar tooth small and far back within the aperture.

"Major diam. 3, alt. axis 6 millim."

Hab. Burma. Kopamedza Peak, Lahupa-Naga Hills, 8375 ft. (*Godwin-Austen*).

"Three specimens marked from the 'North of Buirail Range.'" (*Godwin-Austen*)

527 *Diplommatina miriensis*, *Godwin-Austen*.

Diplommatina miriensis, Godwin-Austen, Rec. Ind. Mus. viii, 1917, p. 577, text-fig. 4b.

Original description — "Shell dextral, tumidly fusiform, sculpture regular, strong, fairly distant costulation; colour pale with an ochre tinge; spire tapering rapidly, apex blunt, suture impressed; whorls 5, tumid, constriction above the aperture,

aperture vertical, oval; peristome double, strong, broadly ovate; columellar margin nearly vertical, with a strong tooth

"Major diam. 0.9, alt. axis 1.5 mm" (*Godwin-Austen*)

Hab. India. Muri Hills (*Officers, Muri Mission, 1911-1912*).

528 *Diplommatina mucronata* *Godwin-Austen*

Diplommatina mucronatus, *Godwin-Austen*, *Rec. Ind. Mus.* viii, 1917, p. 576, text-fig 4 n.

Original description.—"Shell ovately acuminate, rimate, sculpture regular, somewhat distant costulation on the 4th and 5th whorls, becoming finer and closer on the two last, the first 2 whorls smooth, colour white; spire pyramidal, becoming rapidly attenuate, apex fine, blunt; suture well impressed, whorls 7, penultimate the largest, sides well rounded, tumid, aperture oval, subvertical; peristome well thickened, distinctly double.

"Major diam. 2.5, alt. axis 4.75 mm" (*Godwin-Austen*)

Hab. India. Changjuk La, Tsanspu Valley.

529 *Diplommatina nengloensis*, *Godwin-Austen*.

Diplommatina nengloensis, *Godwin-Austen*, *Proc. Zool. Soc.* 1892, p. 514, id., *Land & Freshw. Moll. India*, ii, 1897, p. 10, pl. 65, figs. 3, 3 a

Diplommatina (*Metadiancta*) *nengloensis*, *Kobelt & Mollendorff*, *Nachr. Deuts. Malak. Ges.* xxx, 1898, p. 139; id., *Cat. Pneum.* 1899, p. 59, *Kobelt*, *Das Tierreich*, Lief. 16, 1902, p. 451.

Original description.—"Shell dextral, elongately fusiform, large, solid, sculpture very fine, moderately distant ribbing; colour pale ochraceous; spire high, with flat sides, apex acuminate; suture shallow, whorls $8\frac{1}{2}$, sides flatly convex, constriction some distance behind the aperture, on side, aperture widely ovate, expanded towards the outer margin; peristome double, not thickened; columellar margin subvertical, the tooth very small and remotely situated.

"Major diam. 2.9, alt. axis 5 millim."

Hab. India. Nenglo, North Cachar Hills (*Godwin-Austen*).

"This is a very distinct shell; in its very ovate aperture and small columellar process or tooth it is unlike any other I have in my collection." (*Godwin-Austen*)

530. *Diplommatina perobesa*, *Preston*.

Diplommatina perobesa, *Preston*, *Rec. Ind. Mus.* viii, 1915, p. 540, text-fig 5, *Godwin-Austen*, *tom. cit.* 1918, p. 576, text-figs 5, 5 a

Original description.—"Shell obliquely ovate with exserted spire, pale flesh colour, solid, opaque, whorls 7, the first two submamillary, the third, fourth, and fifth regularly increasing, the sixth large, tumid, the last contracted and abandoning the direction of the axis of the shell, sculptured with coarse, obsolete, oblique,

transverse costulæ; suture well impressed, columella margin vertically descending, bearing a strong, downwardly bent, entering lamella above, sharply angled at the base, diffused above into a thick, outwardly expanded, well defined, parietal callus which joins the upper margin of the labrum and gives to it a continuous appearance, labrum consisting of an outwardly expanded and slightly reflexed, shelf-like projection from which springs an erect, rather thick rim; aperture subcircular

"Alt. 4.5, diam. maj 2.5 mm Aperture alt 1.25, diam. 1.5 (nearly) mm" (*Preston*.)

Hab. India. Upper Rotung, 2000 ft. (*Kemp, Oakes*).

531 *Diplommatina thomsoni*, *Godwin-Austen*.

Diplommatina thomsoni, Godwin-Austen, Proc. Zool. Soc 1892, p. 514, id, Land & Freshw Moll India, II, 1897, p. 9, pl. 65, figs 2, 2a.

Diplommatina (Metadiancta) thomsoni, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 139, id, Cat. Pneum. 1899, p. 59, Kobelt, Das Tierreich, Lief. 16, 1902, p. 451

Original description.—"Shell dextral, elongately fusiform; sculpture, 3 apical whorls smooth, all the rest with very fine regular, rather close ribbing; colour whitish, spire rather high, sides flattened; apex rather blunt, suture moderately impressed, whorls $7\frac{1}{2}$, sides convex, the antepenultimate the largest, last whorl ascending near the aperture, constriction lies directly behind and adjacent to the peristome; aperture oval, columellar tooth small for size of shell and lying within the aperture; peristome as usual.

"Major diam. 2.4, alt. axis 5 millim."

Hab. Burma: South Burreil (*Godwin-Austen*)

"In general form this shell is like *D. pachycheilus*, Bs., a Darling species, but the columellar tooth is never so large as in that species." (*Godwin-Austen*.)

Subgenus *SINICA*, *Mollendorff*

Sinica, Mollendorff, Jahrb. Deuts. Malak. Ges. xii, 1885, p. 369 (section), Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 139 (subgenus), id, Cat. Pneum. 1899, p. 59, Kobelt, Das Tierreich, Lief. 16, 1902, p. 455.

TYPE (1st species), *D. collarifera*, Schumacher & Boettger (*D. labiosa*, Martens non Blanford).

Range. India, Burma, Farther India, China, Japan, Formosa, Malay Archipelago, New Guinea.

Shell generally dextral, last whorl constricted at its commencement, a tooth on the columellar margin, another on the penultimate whorl and facing the latter a palatal fold, visible from outside.

532. *Diplommatina animula*, *Godwin-Austen*.

Diplommatina animula, Godwin-Austen, Proc. Zool. Soc. 1892, p. 516, id., Land & Freshw. Moll. India, II, 1897, p. 12, pl. 66, fig. 2.

Diplommatina (Simca) animula, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 139, id. Cat. Pneum. 1899, p. 59, Kobelt, Das Tierreich, Lief. 16, 1902, p. 455.

Original description —“Shell dextral, ovately fusiform, thin and delicate, and glassy texture, sculpture, rather distant well-marked costulation; colour whitish grey, spire moderately high, sides convex, apex blunt; suture impressed; whorls 6, tumid, sides very convex, antepenultimate the largest; constriction in centre, above the aperture, aperture widely ovate, vertical, angulate on the lower margin of the columella, the tooth large and well developed, peristome very strong

“Major diam. 1.3, alt. axis 2 mm.”

Hab. Burma. Prowi, Lahupa-Naga Hills, Manipur (*Godwin-Austen*).

“This is another minute shell, differing from all others I have seen in the strong peristome and large columellar tooth. *D. delicata* is its nearest ally.” (*Godwin-Austen*.)

533. *Diplommatina canarica*, *Beudome*.

Diplommatina canarica, Beudome, Proc. Zool. Soc. 1875, p. 442, pl. 52, fig. 1, Hanley & Theobald, Conch. Ind. 1876, p. xu, Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 394, Godwin-Austen, Land & Freshw. Moll. India, I, 1886, p. 175, pl. 46, figs. 3, 3a.

Diplommatina kanarica, Theobald, Cat. Shells Brit. India, 1876, Addenda, p. 11.

Diplommatina (Simca) canarica, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 140, id. Cat. Pneum. 1899, p. 60, Kobelt, Das Tierreich, Lief. 16, 1902, p. 458.

Original description :—“Shell dextral, broadly ovate, scarcely or very inconspicuously rimate, flesh-coloured; whorls 6½, convex, all except the apical obtuse one closely, regularly, and sharply costulated, interstices smooth, spire conical, the fifth whorl much the largest, and projecting much more than the penultimate; the penultimate with the constriction just in front of the centre of the circular aperture, peristome shining, continuous round the penultimate whorl, slightly canaliculate in its free portion below, columellar margin much incurved; the tooth prominent, slightly deflexed: total length $\frac{1}{10}$ inch [2.5 mm.].

“Allied to *D. carneola* (Stoliczka), but the columellar margin is very different, and it is a stouter shell.” (*Beudome*)

Hab. India. Yellapore, North Canara (*Beudome*)

534 *Diplommatina carneola*, *Stoliczka*.

- Diplommatina carneola*, Stoliczka, J A S B xl. part 2, 1871, p 152, pl 6, figs 3, 3 a, 3 b, Hanley & Theobald, Conch Ind 1876, pl 140, fig 4, Pfeiffer, Mon Pneum Suppl 3, 1876, p 76, Theobald, Cat. Shells Brit India, 1876, p 42, Nevill, Hand List, 1, 1878, p 284 (*carneola*), Godwin-Austen, Land & Freshw Moll India, 1, 1886, p. 182, pl. 49, figs 8, 8 a
Diplommatina (Sinica) carneola, Kobelt & Mollendorff Nachr. Deuts. Malak Ges xxx, 1898, p 140, id, Cat Pneum 1899, p. 60, Kobelt, Das Tierreich, Lief 16, 1902, p 459

Original description —“*Diplommatina* testa ovato elongata, turrita, vix rimata, carnea, seu carneo-luteola, anfractibus 7, valde convexis, suturis profundis junctis, primis duobus lævigatis, luteis, ceteris costulis obliquis, modice distantibus, ornatis, penultimo maxime inflato, ad terminationem valde constricto, ultimo minore, ad basin rotundato; apertura rotundata, margimbus paulo dilatatis et incrassatis, ad anfractum penultimum conspicuiter ascendentibus, intus lævigatis; labio adnato, paulo expanso, labro duplici, extus prope marginem costa tenui et acuta instructo, columella fere recta, infra dente unico instructa, ad basin vix angulata.

“Diam. anfr. penult 1 2, alt. tot. testæ 2 6, apert alt 0·8, ejusdem diam 0·8 mm”

“Animal carneo-luteolum, tentaculis, rostro ad terminationem, interdumque dorso supero, plus minusve distincte atratis; oculis magnis in latere basali tentaculorum sitis, atris, pede angusto, postice acuminato, operculum corneum, tenuissimum, concentricè multispiratum.”

Hab Burma. Damotha, near Moulmain (*Stoliczka*).

“This species is somewhat allied to *D. puppensis*, Blf., differing from it by its constant smaller size, more tumid or convex, and more widely costulated whorls, and by the aperture being at the columellar base rounded or nearly so, instead of deeply angular and canaliculate, as it always appears to be in *puppensis*.

“The present species was found to be very common on the perpendicular limestone cliffs at Damotha, especially in localities where a little water trickled down the rock. The animals seemed to feed on the minute algæ which were growing in the locality.” (*Stoliczka*)

535. *Diplommatina delicata*, *Godwin-Austen*

- Diplommatina delicata*, Godwin-Austen, Proc Zool Soc 1892, p 517, id., Land & Freshw Moll India, II, 1897, p 13, pl 66, fig. 5.
Diplommatina (Sinica) delicata, Kobelt & Mollendorff, Nachr. Deuts Malak Ges xxx, 1898, p 140; id, Cat Pneum 1899, p 60, Kobelt, Das Tierreich, Lief. 16, 1902, p. 462.

Original description —“Shell dextral, very small, tumidly fusiform, sculpture, very distant, strong costulation, colour pale

horny; spire rather depressed, sides convex, apex blunt; suture well impressed, whorls 6, sides convex, swollen, antepenultimate the largest; constriction above the aperture, aperture ovate, vertical, columellar tooth well marked; peristome as usual.

"Alt axis 1.75 millim." (*Godwin-Austen*.)

Hab. India. E Naga Hills (*Doherty*)

536. *Diplommatina gracilis*, *Beddome*.

Diplommatina gracilis, *Beddome*, Proc. Zool. Soc. 1875, p. 442, pl. 52, fig. 2, Hanley & Theobald, Conch. Ind. 1876, p. xii, Theobald, Cat. Shells Brit. India, 1876, p. 42, Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 394, Nevill, Hand List, 1, 1878, p. 288, *Godwin-Austen*, Land & Freshw. Moll. Ind. 1, 1886, p. 176, pl. 46, figs. 1, 1a, 1b, var. pl. 46, fig. 2

Diplommatina (Sinica) gracilis, *Kobelt & Mollendorff*, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 140, id., Cat. Pneum. 1899, p. 60, *Kobelt*, Das Tierreich, Lief. 10, 1902, p. 464.

Original description:—"Shell dextral, narrowly ovate, straw-coloured, not rimate, whorls $6\frac{1}{2}$, all except the apical or 2 upper ones rather distantly and prominently costulated, interstices smooth, spire rather slender, the fifth whorl the largest and projecting a little more than the penultimate, the penultimate with the constriction over the centre or right centre of the aperture, aperture reniform; peristome continuous round the penultimate whorl, prominently angled, below the tooth double, the outer lip expanded and reflexed, columellar margin nearly straight, the tooth prominent, a little deflexed total length $\frac{1}{2}$ inch [3 mm]" (*Beddome*)

Hab. India. Gudam Hills, Golcondah Hills, Vizagapatam (*Beddome*), Jeypur Hills, Madras (*Beddome*)

Lieut.-Col. *Godwin-Austen* figures (pl. 46, fig. 2) a variety sent to him by Col. *Beddome* from the Jeypur Hills, which has rather more tumid whorls and is less acuminate than the type. In three out of eight specimens he notices another point of difference, i.e. the right margin of the peristome being sharply sinuate, a character not shown in the Golcondah Hill specimens.

537. *Diplommatina subrubella*, *Godwin-Austen*.

Diplommatina subrubella, *Godwin-Austen*, Proc. Zool. Soc. 1892, p. 617, id., Land & Freshw. Moll. Ind. 11, 1897, p. 13, pl. 66, figs. 3, 3a

Diplommatina (Sinica) subrubella, *Kobelt & Mollendorff*, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 142, id., Cat. Pneum. 1899, p. 62, *Kobelt*, Das Tierreich, Lief. 10, 1902, p. 474.

Original description—"Shell dextral, small, fusiform; sculpture, fine, regular, rather close costulation; colour pale reddish, spire high, sides convex, apex blunt, suture impressed; whorls $6\frac{1}{2}$, sides convex, penultimate and antepenultimate equal; constriction in front, above the peristome, aperture circular, nearly vertical;

columellar tooth very small and internal, peristome closely double, not thickened

"Major diam. 1.4, alt. axis 2.6 millim." (*Godwin-Austen*.)

Hab. India Japvo Peak, Angham-Naga Hills, 10,000 ft. (*Godwin-Austen*).

Stated to be a close ally of *D. sherfarensis*, but much smaller and with a coarser sculpture.

538. *Diplommatina subtilis*, *Godwin-Austen*.

Diplommatina subtilis, Godwin-Austen, Proc Zool Soc. 1892, p. 517, id, Land & Freshw. Moll India, II, 1897, p. 13, pl. 66, figs 4, 4a

Diplommatina (Simca) subtilis, Kobelt & Mollendorff, Nachr. Deuts. Malak Ges xxx, 1898, p. 142, id, Cat Pneum. 1899, p. 62, Kobelt, Das Tierreich, Lief 16, 1902, p. 474.

Original description — "Shell dextral, elongately ovate, thickened, sculpture, fine, close, regular costulation throughout; colour pale sienna-brown, spire with convex sides, apex blunt; suture impressed; whorls 6, sides convex, penultimate slightly the largest, the last does not rise much upon the penultimate; constriction in front, but not well marked; aperture circular, suboblique, columellar tooth well developed for the size of the shell, peristome double, strong.

"Major diam 1; alt axis 1.5 millim "

Hab. India. Margarita, Naga Hills (*Doherty*).

"This is a good species, one of the smallest, its elongate form separates it at once from *D. parvula*, the finer costulation and larger size from *D. minuta*" (*Godwin-Austen*)

539. *Diplommatina unicrenata*, *Godwin-Austen*

Diplommatina unicrenata, Godwin-Austen, Proc Zool Soc 1892, p. 516, id, Land & Freshw Moll. India, II, 1893, p. 12, pl. 66, fig 1

Diplommatina (Simca) unicrenata, Kobelt & Mollendorff, Nachr. Deuts. Malak Ges xxx, 1898, p. 142, id, Cat Pneum 1899, p. 62, Kobelt, Das Tierreich, Lief 16, 1902, p. 476

Original description — "Shell dextral, ovately fusiform, sub-rotate, rather thin; sculpture, distant strong costulation on all the whorls, colour white, with a pale lemon-yellow tint in fresh shells; spire with sides convex, apex somewhat blunt; suture well impressed, whorls $7\frac{1}{2}$, antepenultimate the largest, sides convex, the constriction above the aperture, in front, aperture circular, vertical; peristome double, outer wavy in outline, with one very marked and decided crenulation on the upper outer margin, and a slight sinuation on the left lower margin, columellar tooth large and directed downwards.

"Alt. axis 4 millim "

Hab. India. Eastern Naga Hills (*Doherty*).

"... This is a very beautiful new species, the only shell approaching it that I know from this region being *D. angulata* of Moulman." (*Godwin-Austen.*)

Genus **GASTROPTYCHIA**, *Kobelt & Mollendorff*.

Paxillus, Adams, A M N H ser 2, vii, 1851, p 63 (as subgenus of *Diplommatina*), (non *Paxillus*, MacLeay, 1819); Pfeiffer, Mon. Helic. iii, 1853, p. 585 (genus), Adams, Gen. Rec. Moll. ii, 1856, p 288 (subgenus), Pfeiffer, Mon. Pneum. Suppl. 1, 1858, p 14, Chenu, Man. Conchyl. i, part 2, 1860, p 490 (subgenus), Pfeiffer, Mon. Pneum. Genova, vi, 1874, p 440 (genus), Fischer, Man. Conchyl. 1885, p 740 (section), Heude, Mém. Hist. Nat. Emp. Clun. i, 1890, p 131 (genus), Mollendorff, Nachr. Deuts. Malak. Ges. xxiv, 1892, p 20 (genus); Kobelt & Mollendorff, op. cit. xxx, 1898, p 142 (genus), id., Cat. Pneum. 1899, p 62 (genus).
Gastroptychia, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxxii, 1900, p 186, Kobelt, Das Tierreich, Lief. 16, 1902, p 481

TYPE, *P. adversus*, Adams.

Range. India, China, Borneo, Natuna Is., Philippines

Shell pupæform, rimate, generally sinistral, spire acuminate; aperture semi-ovate, ascending on the body-whorl; inner lip adnate, spreading, flexuous; columella with a single, prominent, tooth-like plait; two or more palatal folds; outer lip with a double peristome, emarginate anteriorly; umbilical region with a spiral, elevated ridge, terminating in a notch at the fore part of the aperture. Operculum almost circular, thin, with few, indistinct whorls and a somewhat excentric nucleus.

540 **Gastroptychia insignis**, *Godwin-Austen*.

Diplommatina insignis, Godwin-Austen, J. A. S. B. xxvix, part 2, 1870, p 6, pl. 3, fig. 1; Hanley & Theobald, Conch. Ind. 1875, pl. 139, fig. 10, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p 79; Theobald, Cat. Shells Brit. India, 1876, p. 42, Nevill, Hand. List, i, 1878, p 286, Godwin-Austen, Land & Freshw. Moll. India, i, 1886, p. 168, pl. 50, figs 3, 5, 6, 9.
Paxillus insignis, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 142; id., Cat. Pneum. 1899, p 62.
Gastroptychia insignis, Kobelt, Das Tierreich, Lief. 16, 1902, p 482.

Original description — "Shell sinistral, acuminate oval, colour corneous or pink, costulation close and strong on the upper whorls, obsolete on the two last, spire rather pointed. Whorls 8, lower rounded, at apex flat-sided, penultimate the largest, the constriction of this last situated in front and covered by the parietal callus, suture impressed, aperture vertical, oval, peristome double, outer much thickened, inner continuous, callus strong; columellar margin rounded, the tooth-like process moderate.

"Operculum thin, spiral, no boss at the back. Animal pale colored, tentacles black, rostrum pink, the body spotted with black which shows through the shell in fresh specimens.

"Height 0·27 inch [6·75 mm]; diam. 0·13 [3·25 mm], diam. of ap. with peristome 0·10 inch [2·5 mm]."

Fig 38 — *Gastropylina insignis* ($\times 3$)

Hab. India Burrell Range, Asalu (3000 ft.).

"This fine sinistral form is up to the present time the largest known species from India. It is a well marked shell, and differs widely from the other sinistral species from these hills . . ."
(*Godwin-Austen*)

The specimen now figured is in the British Museum and measures: alt. 6·25, diam 3 mm.

Genus *CLOSTOPHIS*, Benson.

Clostophis, Benson, A. M. N. H. ser. 3, v, 1860, p 95; Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p 11, Stoliezka, J. A. S. B. xl, part 2, 1871, p 157, Fischer, Man. Conchyl. 1885, p 740, Ancy, Bull. Soc. Malac. France, iv, 1887, p 281, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxvi, 1899, p 138, id., Cat. Pneum. 1899, p 106, Kobelt, Das Tierreich, Lief. 16, 1902, p. 484.

TYPE (only species), *C. sankeyi*, Benson.

Range. Burma.

Shell almost biconical, penultimate whorl the largest, last whorl descending, solute, smaller, practically in the direction of the axis; aperture entire, dentate. Operculum and animal unknown.

541 *Clostophis sankeyi*, Benson.

Clostophis sankeyi, Benson, A. M. N. H. ser. 3, v, 1860, p. 95; Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p 12, Theobald, Cat. Shells Brit. India 1876, p 43, Ancy, Bull. Soc. Malac. France, iv, 1887, p 43, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxxi, 1899, p 138, id., Cat. Pneum. 1899, p 106, Kobelt, Das Tierreich, Lief. 16, 1902, p. 484, text-fig 103.

Original description:—"Testa late umbilicata, sub-biconica, lævi, spira turrato-conica, lateribus cavis, apice obtuso, sutura profunda; anfractibus 5, primis angustis convexiusculis, penultimo multo majore cylindrico, ultimo antice rapide descendente, soluto,

tubuliformi, quoad peripheriam antepenultimi minore; apertura integra, subaxiali, subumbilicali, valde obliqua, subcirculari, intus superne dente 1 submarginali loco quasi parietali munita, peristomate tenui, expanso

"Diam. major $1\frac{1}{2}$, alt. $1\frac{3}{4}$ mill." (Benson.)

Hab. Burma Farin Caves, Moulmein (Sankey)

The specimen from which this species was described was found by Benson in earth filling the cavity of a decayed specimen of *Sophrna schistostelus* sent to him by Major Sankey.

Genus OTOPOMA, Gray

Otopoma, Gray, Nomencl. Moll. Anim. Brit. Mus. i, 1850, p. 35; Pfeiffer, Zeits. Malak. viii, 1851, p. 157, id., Mon. Pneum. 1852, p. 179, Adams, Gen. Rec. Moll. ii, 1856, p. 292 (as subgenus of *Cyclostoma*), Chenu, Man. Conchyl. i, part 2, 1860, p. 492 (as subgenus of *Tiropndophora*); Blanford, A. M. N. H. ser. 3, xiii, 1864, p. 464, Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 167, Bouguignat, in Revu. Faune & Flore Pays Comalis, vi, 1882, p. 57, Fischer, Man. Conchyl. 1885, p. 747 (as subgenus of *Cyclostoma*), Godwin-Austen, Land & Freshw. Moll. India, ii, 1897, p. 29, pl. 67 (anatomy), Martens, Besch. Weichth. Deuts. Ost-Afr. 1897, p. 7, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 157, id., Cat. Pneum. 1899, p. 77, Godwin-Austen, in H. O. Forbes, Nat. Hist. Sokotra, 1903, p. 161; Kobelt, Conch.-Cab., Cyclophoridae, ii, 1913, p. 986.

TYPE, *Turbo fohaceus*, Chemnitz.

Range. India, N.E. Africa, South Arabia.

Shell umbilicated, subglobose, solid, with an ear-like process from the inner side of the mouth, covering part of the axis, mouth circular; peristome simple, or slightly reflected.—Operculum shelly, solid, whorls convex in the centre, with simple edges.

542. *Otopoma hinduorum*, Blanford.

Otopoma clausum (non Sowerby), Benson, A. M. N. H. ser. 3, iv, 1859, pp. 92, 95

Otopoma hinduorum, Blanford, op. cit. xiii, 1864, p. 464, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 122, Hanley & Theobald, Conch. Ind. 1870, pl. 6, fig. 5, fig. 6 (var.), Pfeiffer, Mon. Pneum. Suppl. 3, 1875, p. 167, Theobald, Cat. Shells Brit. India, 1876, p. 35, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 158; id., Cat. Pneum. 1899, p. 78

Cyclostoma (*Otopoma*) *hinduorum*, Blanford, J. A. S. B. xxxix, part 2, 1870, p. 12, pl. 3, fig. 6, Nevill, Hand. List, i, 1878, p. 307.

Otopoma (*Georgina* ? *Cyclotopsis* ?) *hinduorum*, Kobelt, Conch.-Cab., Cyclophoridae, ii, 1913, p. 1006, pl. 148, figs. 16, 16, pl. 150, figs. 9-12

Original description — "Testa imperforata, clausa, umbilicata globoso-turbinata, solidula, nitida, striata, juxta suturam et circa umbilicum laevis, extus versus peripheriam liris spiralibus sub-

confertis nonnunquam obsoletis circumdata, carnea vel albido-carnea; apice plerumque nigro, spira conoideo-convexa, sutura impressa. Anfr $4\frac{1}{2}$ convexi, ultimus teres, antice descendens, varicem imperfectum interdum pone aperturam gerens. Apertura fere verticalis, rotunda, peristoma obtusum, marginibus disjunctis, externo antice arcuato, basali expansiusculo, columellari sublato expanso, umbilicum omnino callo complente. Operc testaceum, intus membranaceum, paucispirale, margine interno anfractuum elevato, nucleo excentrico.

"Diam. maj. 12, min 11, axis 9, ap diam. 6 mm."

Fig 39.—*Otopoma linduorum*

Hab. India: Kathiawar (*Theobald*).

"From *Cyclostoma* (*Otopoma*) *clausum*, Sow., to which Mr. Benson referred the present form, it is distinguished by being much smoother, with a less excavated umbilical region and a higher spire

"It is the most eastern form of the sub-genus known, other forms assigned to *Otopoma* found in the Indian and Burmese areas having been shewn to belong to the *Cyclophoridae*." (*Blanford*)

The specimen now figured is in the British Museum, Cuming collection. It is larger and more elevated than the type, measuring . 13.5 × 12 × 12.25 mm.

Genus *CYCLOTOPSIS*, *Blanford*.

Cyclotopsis, Blanford, A. M. N. H. ser 3, xii, 1884, p. 447, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 111, Suppl. 3, 1875, p. 161; Fischer, Man. Conchyl. 1885, p. 747, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 156, id., Cat. Pneum. 1899, p. 76

TYPE, *Cyclostoma semistriatum*, Sowerby.

Range. India.

Shell widely umbilicate, depressed or depressed-turbinate, furnished with spiral liræ, aperture subrotundate; peristome thin, operculum multispiral, double, the inner membranous, the outer calcareous, the edges raised.

543. *Cyclotopsis montana*, Pfeiffer.

Cyclostoma rusticum, Pfeiffer, *Proc. Zool. Soc.* 1851, p 250

Cyclotus pfeifferi, Gray, *Nomencl. Moll. Brit. Mus.* part 1, 1850, p 9 (nom. nud.).

Original description — "Shell suborbicular, rather discoid, spirally grooved, whitish, with an interrupted zone of a pale brownish colour; spire depressedly conical, obtuse, volutions, four, rounded;

suture very slightly channelled; aperture circular; peritreme thin, whitish, slightly reflected, and spreading a little posteriorly over the last volution, umbilicus very large, showing the four volutions within" (Sowerby)

Major diam. 17, min. 13, alt. 10.5 mm.

Fig. 40.—*Cyclostoma subdiscoides*.

Hab. S. India.

The specimen here illustrated is in the British Museum

547. *Cyclostoma trailli*, Pfeiffer

(as synonym of *C. subdiscoides*)

Cyclostoma trailli, Kobelt & Mollendorff, Nachr. Deuts Malak. Ges.
xxx, 1898, p 167, id, Cat Pneum, 1899, p. 77

Original description.—"T sublateumbilicata, depresso-turbinata, solidula, liris confertis, subtus minoribus sculpta, carneo-albida, fusculo-variegata, et fascia 1 rufa infraperipherica notata, spira breviter turbinata, acutiuscula, anfr. $4\frac{1}{2}$ convexi, celeriter accrescentes, juxta suturam lævigati, ultimus teres, antice vix descendens; apertura obliqua, subangulato-circularis; perist. tenue, vix expansiusculum, ad anfr. contiguum subinterruptum—Operc. Cyclosti subdiscoides.

"Diam. maj 14, min. 12, alt. $10\frac{1}{2}$ mill." (Pfeiffer.)

Hab. India: Russel-Canda, Madras (*Traill*).

Allied to *C. subdiscoides*, Sowerby, but smaller, with a narrower umbilicus, a higher spire, and the last whorl smooth near the suture.

Genus *OMPHALOTROPIS*, Pfeiffer.

Omphalotropis, Pfeiffer, Zetts Malak. viii, 1851, p 176; id, Proc. Zool. Soc. 1852, p 151, id., Mon Pneum 1852, p. 306, id, cp cit. Suppl. 2, 1865, p. 175, Blanford, A. M. N. H. ser 4, iii, 1869, p 340 (radula), id, J. A. S. B. xlv, part 2, 1875, p. 46; Fischer, Man Conchyl. 1885, p. 748

Hydrocena (*Omphalotropis*), Pfeiffer, Mon. Pneum Suppl. 1, 1858, p 155

Reana (*Omphalotropis*), Pfeiffer, Mon. Pneum. Suppl 3, 1870, p 209.

TYPE (1st species), *Cyclostoma aurantiaca*, Deshayes.

Range Mascarene Is, Andaman and Nicobar Is, S. India, Malaysia, Polynesia.

Shell narrowly umbilicated or perforate, turreted or globose-turbinate, keeled around the umbilical perforation, aperture ovate, peristome not continuous, straight or slightly reflected. Operculum thin, corneous, paucispiral, subovate, angular, nucleus excentric.

548. *Omphalotropis andersoni*, *Blanford*.

Reaha (*Omphalotropis*) *andersoni*, Blanford, J. A. S. B. xlix, part 2, 1880, p. 216, pl. 2, fig. 18.

Omphalotropis (*Eurytropis*) *andersoni*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxx, 1898, p. 148, id., Cat. Pneum. 1899, p. 68.

Original description — "Shell perforate, ovately conical, thin, reddish brown in colour, smooth, not polished, obliquely striated. Spire conical, with sides nearly straight, apex acute, suture slightly impressed. Whorls 7, rather flat, the last with a hair-like keel at the periphery (the keel sometimes appearing on the upper whorls just above the suture), convex, smooth, and radiately striated below, and furnished with an obtuse, subobsolete keel around the umbilicus, the space inside the umbilical keel being smooth, not ribbed. Aperture ovate, oblique, nearly diagonal, a little shorter than the spire. Peristome obtuse, the margins approaching each other, and joined by a thin callus; outer edge straight, basal expanded, columellar expanded below, but emarginate and cut away into a re-entering angle near the perforation. Operculum?

"Length 7, diam. 5; length of aperture $3\frac{1}{4}$, breadth $2\frac{3}{4}$ mm" (*Blanford*.)

Hab. Andaman Is. (*Anderson*).

This species is stated closely to resemble *O. rubens* of Mauritius in form, but to differ in sculpture, the shape of the whorls, etc. The umbilical keel is but faintly marked.

549 *Omphalotropis aurantiaca*, *Deshayes*.

Cyclostoma aurantiaca, Deshayes, in Bélanger, Voy. Ind. Orient. Zoologie, 1832, p. 416, pl. 1, figs. 16, 17; id., in Lamarck, Hist. Nat. Anim. s. vert. Ed. 2, viii, 1838, p. 373.

Original description.—"O. testa perforata, globoso-conica, oblique striatula, supra suturam, ad peripheriam, et circa umbilicum oblique vel radiatim costulato-striata, sub epidermide fusca

* A. M. N. H. ser. 2, viii, 1851, p. 194

non nitente albida; spira acuminato-conica, apice acutiusculo, sutura profunda, anfractibus 6, convexis, ultimo ad peripheriam et circa umbilicum subcarinato, carina umbilicali extus linea impressa notata, apertura subobliqua, angulato-ovata, spiram æquante; peristomate recto, acuto, marginibus remotioribus callo tenui junctis, columellam subincrassato Operc. — ?

“Long. 3, diam $2\frac{1}{2}$ mill” (Benson)

Hab. Andaman Is (Theobald)

552. *Omphalotropis sordida*, Frauenfeld

Assuminea sordida (Behn), Frauenfeld, Verh K. K. zool.-bot Ges Wien, xiii, 1863, p. 212

Omphalotropis sordida, Morch, Journ Conchyl xx, 1872, p. 318, id., op cit xxiv, 1876, p. 362

Original description (in German) — “Shell turbinate, acute, rather solid, dull, opaque, brown, with two indistinct clear spiral bands, whorls 5–6, increasing gradually, flattened, suture very slightly impressed, last whorl suddenly descending. Aperture moderately, the upper part rather prominently angular. Margins not united, acute, columellar thickened, somewhat reflected, leaving only a narrow umbilical perforation.

“Length 4.4, width 3 mm” (Frauenfeld)

Hab. Nicobar Is. Sambelong (Reinhardt).

Genus *REALIA*, Gray.

Realia, Gray, Synopsis Cont Brit Mus Ed 42, 1840, first issue p. 149 (nom nud), id., Ed 44, 1842, p. 91 (nom nud), id., Proc. Zool Soc 1847, p. 182 (nom nud), id., Nomencl Moll Brit. Mus part 1, Cyclophoridæ, 1850, p. 63, Pfeiffer, Zerts Malak viii, 1851, p. 176, Gray, Cat Phaneropn. Brit Mus 1852, p. 217, Pfeiffer, Mon Pneum. 1852, p. 305, Adams, Gen Rec Moll ii, 1856, p. 299 (as subgenus of *Hydrocena*), Pfeiffer, Mon Pneum Suppl 1, 1858, p. 153, id., Suppl 2, 1866, p. 170, id., Suppl 3, 1875, p. 207 (+ *Omphalotropis*), Cooke, Cambridge Nat Hist iii, 1895, p. 414 (as subgenus of *Omphalotropis*); Kobelt & Mollendorff, Nachr. Dents Malak Ges xxx, 1898, p. 148, id., Cat. Pneum. 1899, p. 68.

TYPE, *Realia egea*, Gray.

Range Andaman Is, New Zealand, Marquesas.

Shell perforate or narrowly umbilicated, turreted or globose-turbinate, keeled around the perforation. Aperture ovate, peristome continuous, straight or expanded. Operculum thin, corneous, paucispiral.

553. *Realia decussata*, Blanford.

Realia decussata, Blanford, J A S. B. xlix, part 2, 1880, p. 218.

Original description: — “Shell perforate, ovately conical, rather thin, finely marked with oblique stræ of growth and minute

decussating spiral lines (only visible beneath the lens), costulately striated on the upper whorls (except the two uppermost) and close to the suture on the lower whorls, pale rufescent brown, with a pale band round the body whorl. Spire conical, apex sharp, suture impressed. Whorls 6, convex; the last rounded at the periphery and below, radiately striated beneath, more strongly in the umbilicus, and having an impressed line at the base around the umbilicus in the place of a keel. Aperture oblique, oval, but little higher than broad, about $\frac{3}{4}$ of the length. Peristome thin, the margins approaching each other and united by a thin callus, the outer and basal edges simple, columellar margin slightly expanded below, curved back into a shallow re-entering sinus close to the perforation. Operc ?

"Length $3\frac{1}{4}$, diam $2\frac{1}{4}$; length of aperture $1\frac{1}{2}$, breadth $1\frac{1}{2}$ mm."

Hab. Andaman Is. (*Anderson*).

"Independently of sculpture, the species may be distinguished from *O. disterrina* by its less globose form, and by the absence of the keel around the periphery; from *R. andersoni* by its much smaller size, more rounded whorls, and by the absence of the keel, and from *R. pallida* by rounder whorls, by colour, and by its rather more turreted form" (*Blanford*).

554. *Realia pallida*, *Blanford*

Realia pallida, *Blanford*, J. A. S. B. xlix, part 2, 1880, p. 217, pl. 2, fig. 19.

Original description — "Shell perforate, ovately conical, thin, whitish horny, smooth, moderately polished, with faint subobsolete vertical striation (There is also, beneath the lens, a faint indication of minute spiral striation, but I am not sure that this is not an individual peculiarity). Spire conical, apex acute, suture impressed. Whorls 6, slightly convex, the last rounded at the periphery and below, radiately striated around the perforation. Aperture nearly vertical, ovate, shorter than the spire. Peristome thin, margins approaching each other, joined by a thin callus, the outer lip simple, the columellar slightly expanded.

"Length $4\frac{1}{4}$, diam. 3, length of aperture 2, breadth $1\frac{1}{2}$ mm." (*Blanford*)

Hab. Andaman Is. (*Anderson*)

The author states that neither this species nor *O. andersoni* can be confounded with the globose *O. disterrina* with its costulate striation near the suture and inside the umbilicus, its rounded whorls, and its aperture equal in length to the spire.

Georissa milium, Pfeiffer, Mon. Pneum Suppl 3, 1876, p 292

Original description — "Testa aperte umbilicata, minutissima, trochiformis, lævigata, albida, spira conica, sutura profunda, apice obtuso, anfractibus $4\frac{1}{2}$ convexis, ultimo inflato rotundato; apertura obliqua, diagonal, subcirculari; peristomate expansiusculo, margine recto acuto, integro, breviter adnato, umbilico margine angulato, compressiusculo

"Long $1\frac{1}{4}$, diam. vix 1 mill." (Benson)

Hab India Musmai, near Cheriapoonjee, Assam

This species and *A. tessa* were found by Benson in moss

559. *Acmella moreletiana*, Nevill.

Acmella moreletiana, Nevill, Hand List, 1, 1878, p 251, Godwin-Austen & Nevill, Proc Zool Soc 1879, p 737, pl 59, fig. 4

Acmella (s s) *moreletiana*, Kobelt & Mollendorff, Nachr. Deuts Malak Ges. xxx, 1898, p. 153, id, Cat Pneum 1899, p 73

Original description — "Shell smaller than *A. tessa*, larger than *A. hyalina*. Whorls fine [$5\frac{1}{2}$], more convex than in either of the above, the last whorl globosely rounded, with a much more open umbilicus; sculpture round the umbilicus in a very characteristic manner with regular distinct plications; beneath the suture, a faint striation is discernible, by the aid of a lens.

"Long. 2, diam. $1\frac{1}{3}$ mill." (Nevill)

Hab Nicobar Is. Battì Malve (Stoliczka).

560. *Acmella roepstorffiana*, Nevill.

Acmella roepstorffiana, Nevill, Hand List, 1, 1878, p 251, Godwin-Austen & Nevill, Proc Zool Soc. 1879, p. 737, pl 59, fig 5.

Acmella (s. s.) *roepstorffiana*, Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxv, 1898, p. 163, id., Cat. Pneum. 1899, p. 73.

Original description.—"Shell not quite so large as the preceding [*A. tersa* and *A. hyalina*], with less convex whorls, less globose last whorl, and less open umbilicus, in these respects it is nearer *A. hyalina*; the last whorl is, however, more produced and contracted than in *A. hyalina*. The sculpture differs altogether from that of the other described species of the genus; it is throughout regularly, closely, evenly striated, the striae incised and oblique-excavated at the suture.

"Long. $1\frac{1}{2}$; diam. 1 mill."

Hab. Nicobar Is. Katchall (*Stoliczka*)

"The shell is of a silky, translucent and shining texture, with 5 almost cylindrically turreted whorls, the last a trifle compressed at the periphery, the umbilicus is exceedingly narrow and partially overlapped by the thickened peristome, which here and there, under the lens, clearly shows a duplex character; the aperture is very small, unusually broad in proportion to its height, and almost circular, with the margins almost but not quite continuous." (*Nevill*.)

This species and *A. mulum* were found by Benson in moss.

Family HELICINIDÆ.

Genus **HELICINA**, *Lamarck*.

Helicina, Lamarck, Ann Mus Hist Nat Paris, v, 1804, p 91, id, Hist Nat Anim s vert vi, part 2, 1822, p 102, Gray, Zool Journ i, 1824, p 62, Guilding, op cit iii, 1828, p 528, Deshayes, Hist Nat Anim s vert (new ed) viii, 1838, p 153, Pfeiffer, Mon. Pneum 1852, p 338, id, Suppl 1, 1858, p 178, Chenu, Man Conchyl 1859, p. 495, Pfeiffer, op cit Suppl 2, 1865, p 210, id, Suppl 3, 1876, p 243, Fischer, Man. Conchyl 1885, p. 794, Cooke, Cambridge Nat. Hist. iii, 1895, p 410, Wagner, Denks. K. Akad. Wiss. Wien, lxxvii, 1905, p 212, id, Conch.-Cab., Helicindæ, 1910, p. 269.

TYPE, *Helicina neritella*, Lamarck.

Range. Intertropical America, Antilles, Seychelles, Burma, Andaman and Nicobar Is, Malaysia, New Guinea, China, Japan.

Shell imperforate, turbinate, globular or depressed, base flattened and callous, spire short, few-whorled, aperture triangular or semi-ovate, entire; peristome simple, straight or thickened, reflected, frequently dilated at the base, columella callous, straight, operculum testaceous or corneous, semi-ovate

Subgenus **SULFURINA**, *Mollendorff*.

Sulfurina (genus), Mollendorff, Bei Senck Naturf Ges 1893, p 141; Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p 371

TYPE, *Helicina citrina*, Gould.

Range. Andaman and Nicobar Is, Malaysia, New Guinea, Polynesia.

Shell conical or depressed conoid, bright yellow when fresh, rather thin; aperture scarcely oblique; peristome little thickened, reflexed.

562. *Helicina behniana*, *Pfeiffer*

Helicina behniana, Pfeiffer, Proc Zool Soc. 1859, p 29, id, Mon. Pneum Suppl 2, 1865, p 237, id, Malak Blatt xxiv, 1877, p. 156, Nevill, Hand List, i, 1878, p 324

Helicina (*Pachystoma*) *behniana*, Morch, Journ Conchyl xx, 1872 p 318, id, op cit xxiv, 1876, p 363.

Helicina behniana, Sowerby, Thes. Conch iii, 1866, p. 281, pl. 268, fig 76, Reeve, Conch. Icon xix, 1873, *Helicina*, pl. 5, fig 37.

Sulfurina behniana, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p. 375, pl. 2, figs. 9a-9c, id., Conch.-Cab., Helicidae, 1907, p. 24, pl. 3, figs. 19-21.

Original description.—"T. conoideo-depressa, tenuuscula, sub lente leviter striatula, oleoso-micans, flavida; spura regulariter conoiden, acutiuscula; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus peripheria subangulatus; apertura obliqua, integra, triangulari-semiovalis, columella brevissima, subincrassata, callum emittens tenuem, diffusum; perist. sublate expansum, margine columellari leviter arcuato. Operc. solidulum, concolor.

"Diam. maj. $7\frac{1}{2}$, min $5\frac{3}{4}$, alt $4\frac{1}{2}$ mill" (*Pfeiffer*.)

Hab. Nicobar Is.: Sambelong, Pulo Panjang (*Reinhardt*); Katchal (*Roepstorff*)

563. *Helicina bensoni*, Wagner.

Sulfurina bensoni, Wagner, Conch.-Cab., Helicidae, 1907, p. 26, pl. 4, figs. 1-3

Original description (in German).—"Shell small, conical, with rounded base, yellow-brown, with two white bands at suture and keel, upper whorls light red-brown; the sculpture consists of very fine radial lines of growth and a few spiral lines, almost obliterated and only visible under a lens. The conical spire consists of four flattened whorls, increasing slowly and regularly, the last bluntly keeled, descending very little and slowly below the keel, the bluntly triangular aperture is slightly oblique, the peristome scarcely thickened and a little expanded, the sinuosity at the junction of the basal margin with the columella is slight, the angle being distinctly visible. The rather thick basal callus is distinctly circumscribed

"Diam. maj. 3 6, min. 3 3, alt. 2 6 mm.

"Operculum yellowish-white on either side, with a rather thick, finely granulated calcareous lamella and distinctly raised sigmoid edge" (*Wagner*.)

Hab. Nicobar Is.

Stated to agree somewhat with the description of *H. scrupulum*, but smaller, while the two red bands above the periphery are absent; the last whorl is decidedly bluntly keeled and the aperture not lunate.

564 *Helicina zelebori*, Pfeiffer.

Helicina zelebori, Pfeiffer, Verh. K. K. zool.-bot. Ges. xvii, 1867, p. 807; Pfeiffer, Mon. Pneum. Suppl. 3, 1870, p. 247

Pachystoma zelebori, Frauenfeld, Verh. K. K. zool.-bot. Ges. xix, 1869, p. 879, Morch, Journ. Conchyl. xx, 1872, p. 331

Ilelcina (*Pachystoma*) *zelebori*, Morch, Journ. Conchyl. xxiv, 1876, p. 364

Sulfurina zelebori, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p. 380, pl. 3, figs. 5a-5c, id., Conch.-Cab., Helicidae, 1907, p. 32, pl. 5, figs. 1-3

Original description —“*T. parvula*, conoidea, solida, lævigata, nitida, pallide straminea; spira breviter conoidea, vertice obtusiusculo, sutura levis, anfr. 4 vix convexiusculi, ultimus latus, subdepresso-rotundatus, subtus parum convexus, medio callo concolore parum expanso munitus; columella brevissima, triangularis, apertura obliqua, late semiovalis, perist. simplex, rectum, margine basali cum columella angulum obtusum formante.

“Diam maj $4\frac{3}{4}$, min. 4, alt. 3 mm.” (*Pfeiffer*.)

Hab Nicobar Is (*Novara Expedition*).

The species is compared by the author with *Helicina prsum*, Phil., which it resembles, but from which it may be distinguished by the rounded last whorl, thin peristome, etc. From *H. nicobarica* it is said to differ in the higher spire, absence of keel, and the simple straight peristome.

Var. *amphibola*, *Wagner*.

Sulfurina zelebori amphibola, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p. 380, pl. 3, fig. 4, id, Conch.-Cab., Helicinidae, 1907, p. 32, pl. 5, fig. 4

Original description (in German) —“Shell conoid, yellowish-corneous or brownish-yellow, frequently with dark apex and two translucent dark bands on a milky-white clouded ground; the last whorl is more rounded and descends more in front, the peristome is more dilated and reflexed. Operculum typical

“Diam 5, height 3.8 mm.” (*Wagner*.)

Hab. Andaman Is.

The author states on several occasions he received this form labelled “*Helicina scrupulum*, Benson.”

Subgenus APHANOCONIA, *Wagner*.

Aphanoconia (genus), Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p. 388, id, Conch.-Cab., Helicinidae, 1910, p. 158, Bourne, Proc. Zool. Soc. 1911, p. 702.

TYPE, *Helicina verecunda*, Gould (1st species).

Range. Burma, Andaman and Nicobar Is., Seychelles, Malaysia, Philippines, New Guinea, S. China, Japan, Micronesia, Melanesia.

Shell small, conoid; peristome somewhat thickened, not reflexed or slightly so, operculum triangular-rotundate with acute upper angle, sigmoid margin rather depressed and only slightly S shaped.

565. *Helicina andamanica*, Benson.

Helicina andamanica, Benson, A. M. N. H. ser. 3, vi, 1860, p. 194, Pfeiffer, Mon. Pneum. Suppl. 2, 1865, p. 244, Hanley & Theobald, Conch. Ind. 1870, pl. 6, fig. 10, id, op. cit. 1876, p. xv, Theobald, Cat. Shells Brit. India, 1876, p. 43, Nevill, Hand. List, 1, 1878, p. 43 (+ var. minor)

Aphanocoenia andamanca, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, LXXVII, 1905, p. 406, pl. 6, figs 11 a-11 c, id. Conch.-Cab., Helicimidae, 1908, p. 177, pl. 34, figs 11-18, Bourne, Proc. Zool. Soc. 1911, pl. 41, fig. 68 (radula).

Original description:—"Testa sublenticulari, solidiuscula, stris confertissimis sub lente decussata, rugis spiraliibus obsoletis, subtus magis conspicuis, muvita, albida, superficie citrina, linea peripherica rubente suturam sequente ornata; spira convexo-conoidea, apice obsolete mucronato, sutura lineari, marginata, anfr. $4\frac{1}{2}$ planulatis, ultimo acute compresso-carinato, subtus convexiusculo; apertura obliqua, triangulari, albida, peristomate acuto, expansiusculo, margine columellari brevi, sinuato, callum subcircularem emittente, calli basi elevatiore, versus marginem aperturæ obtuse angulata. Operculo tenui, albido, medio obsolete granulato, intus lutescente. "Diam. maj. 9, minor $7\frac{1}{2}$, axis 5 mill." (Benson.)

Hab. Andaman Is. (Theobald).

Allied to *H. nicobarica*, Philippi, but larger.

566. *Helicina arakanensis*, Blanford

Helicima arakanensis, Blanford, J. A. S. B. xxxiv, 1865, p. 85; Hanley & Theobald, Conch. Ind. 1870, pl. 6, fig. 9; Theobald, Cat. Shells Brit. India, 1876, p. 43, Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 283, Nevill, Island List, 1, 1878, p. 326.

Aphanocoenia merguensis andamanensis, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, LXXVII, 1905, p. 402, pl. 6, figs 7 a, 7 b.

Original description.—"Shell depressely turbinate, sublenticular, rather thin, obliquely striated above, radiately and very minutely beneath, polished, flesh-coloured, with a darker red band in the centre of the whorls above, and another on the last whorl, just below the periphery, apex yellow. Spire convexly conoid, apex acute. Whorls 4, the last compressed and sharply keeled, moderately convex at the base, furnished with a polished subgranulate central callus, columella very short. Aperture diagonal, triangular, peristome white, slightly expanded. Operculum light grey, shelly,

"Major diameter 6, minor 5, axis $3\frac{1}{2}$ millim." (Blanford)

Hab. Burma, Raman Island, Coast of Arakan.

A smaller variety, measuring—major diameter 5, minor $4\frac{1}{2}$, axis 3 millim., is mentioned as being abundant in the southern portion of the Bassein District.

Stated to be related to *H. merguensis*, Pfr., and *H. andamanca*, Bens., but smaller than either, mainly distinguished from the former by the absence of the close spiral striation, so marked in that species, and from the latter by different colouring, higher spire, and closer sculpture.

While merging this species as a subspecies of *H. merguensis* in 1905, Dr. Wagner subsequently reduced it to a synonym of *H. nicobarica* *.

* Conch.-Cab., Helicimidae, 1908, p. 176.

567. *Helicina dunkeri*, Zelebor.

Helicina dunkeri, Zelebor, Verh. K. K. zool.-bot. Ges. xvii, 1867, p. 808, Pfeiffer, Mon. Pneum. Suppl. 3, 1876, p. 285, id., Malak. Blatt. xxiv, 1877, p. 156, Nevill, Hand List, i, 1878, p. 324.

Pachystoma dunkeri, Fiauenfeld, Verh. K. K. zool.-bot. Ges. xix, 1869, p. 879, Mörch, Journ. Conchyl. xx, 1872, p. 331.

Helicina (Pachystoma) dunkeri, Mörch, Journ. Conchyl. xxiv, 1876, pp. 363, 366.

Aphanoconoma dunkeri, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p. 407, pl. 6, figs. 12 a-12 c, id., Conch.-Cab., Helicinidae, 1908, p. 179, pl. 34, figs. 14-19.

Original description.—"T. sublenticularis, carinata, solida, confertissimecapillaceo-striata, sericea, carnea, saturatius variegata; spira breviter conoidea, vertice minuto; sutura levis, marginata; anfr. $4\frac{1}{2}$ planiusculi, ultimus acute compresso-carinatus, basi convexiusculus, levius striatus, medio callo crasso, albedo, subcircumscripto munitus; apertura diagonalis, triangularis, ad carinam subcanaliculata; perist. simplex, margine dextro anguste expanso, basali reflexiusculo, cum columella brevissima, callosa angulum distinctum formante.—Operculum solidum, margaritaceum.

"Diam. maj. 10, min. 9, alt. 5 mm" (*Zelebor*).

Hab. Nicobar Is.: Camorta and Preparis (*Stolletzka*).

Stated to be nearest to *H. rosaliae*, a Philippine species, but much larger, shining, the carina less pronounced, the peristome a little more expanded, while there is no fold at the base of the columella.

568. *Helicina gratulata*, Sowerby

Helicina gratulata (Blanford), Sowerby, Thes. Conch. iii, 1866, p. 296, pl. 278, fig. 457, Reeve, Conch. Icon. xix, 1873, *Helicina*, pl. 11, fig. 96.

"Hel. testa trochiforme, straminea, spira subacuminata, anfractibus convexiusculis; ultimo anfractu subcompresso, medio acute carinato, supra infraque convexo, columella tenui, obliqua, labio externo tenuissimo.

"Shell trochiform, straw coloured, spire subacuminated, whorls rather convex, last whorl rather compressed, acutely keeled in the middle, convex above and below, columella thin, oblique; outer lip very thin." (*Reeve*.)

Diam. maj. 8.5, alt. 7 mm. (ex icon.).

Hab. Burma. Pegu.

569. *Helicina merguensis*, Pfeiffer

Helicina merguensis, Pfeiffer, Proc. Zool. Soc. 1857, p. 111, id., Mon. Pneum. Suppl. 1, 1858, p. 216, Theobald, Cat. Shells Brit. India, 1876, p. 43.

Aphanoconoma merguensis, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p. 401, pl. 6, figs. 3 a-6 e, Bourne, Proc. Zool. Soc. 1911, pl. 35, fig. 27 (anatomy), pl. 42, fig. 64 (radula).

Original description.—"T. depresse turbinata, tenuiuscula, oblique striata et spiraliter confertissime sulcata, nitidula, carnea;

spira conoidea, apice lutea, acutiuscula; antr. $4\frac{1}{2}$ planulati; ultimus compressus et acute carinatus, basi modice convexus, callo centrali nitido, granulato munitus, columella brevissima, basi obsolete tuberculata; apertura diagonalis, triangularis; perist. album, breviter expansum, margine basali cum columella subangulatum juncto -- Opere margaritaceum.

"Diam maj. $7\frac{1}{2}$, min. $6\frac{3}{8}$, alt. 4 mill." (Pfeiffer.)

Hab. Burma. Mergui.

In his later work on the genus *Helicina* (Conch.-Cab. 1908, p. 176) Wagner reduces *H. merguensis* and *H. arakanensis* to synonyms of *H. nicobarica*.

570. *Helicina nicobarica*, Pfeiffer.

Helicina nicobarica (Philippi), Pfeiffer, Zeits. Malak. iv, 1847, p. 149, id., Conch.-Cab., Helicinaceen, 1850, p. 62, pl. 2, figs. 19-21, id., Cat. Phaneropa Brit. Mus. 1852, p. 298, id., Mon. Pneum. 1852, p. 402, Tryon, Amer. Journ. Conch. v, 1869, p. 111, Stoliczka, J. A. S. B. xxxix, part 2, 1870, p. 88, Reeve, Conch. Icon. xix, 1873, *Helicina*, pl. 21, figs. 187 a, 187 b, Pfeiffer, Malak. Blatt. xxiv, 1877, p. 157, Nevill, Hand List, i, 1878, p. 324.

Helicina nicobaricus, Sowerby, Thes. Conch. iii, 1866, p. 293, pl. 276, figs. 381, 382.

Helicina (*Pachystoma*) *nicobarica*, Adams, Gen. Rec. Moll. ii, 1856, p. 304, Moreh, Journ. Conchyl. xx, 1872, p. 318, id., op. cit. xxiv, 1876, p. 363.

Aphanocoona merguensis nicobarica, Wagner, Denks. Kaiserl. Akad. Wiss. Wien, lxxvii, 1905, p. 402, pl. 6, figs. 5a-5c.

Aphanocoona nicobarica, Wagner, Conch.-Cab., *Helicina*, 1908, p. 176, pl. 34, figs. 20-22.

Original description:—"T. lentularis, tenuiuscula, lævigata, nitidula, albida vel carnea, fascus 1-2 angustis rubris plerumque ornata; spira brevis, obtusa, anfr. 4, planiusculi, ultimus acute carinatus, basi convexior, interdum strus elevatis spiralibus obsolete cinctus, apertura subobliqua, obtuse triangularis; columella brevis, obsolete tuberculata; perist. acutum, brevissime expansum, callus basali nitidus, linea albida circumscriptus. -- Opere. tenue, carneum.

"Diam $5\frac{1}{2}$, alt. $3\frac{1}{2}$ mill." (Pfeiffer.)

Hab. Nicobar Islands (*Philippi*); Kar Nicobar and Battì Malve (*Stoliczka*); Sambelang (*Reinhardt*); Katchal and Nancouri (*Roepstorff*).

Nevill mentions a var. *minor* (? distinct species) from Battì Malve, but gives no description or measurements.

Stoliczka (*l.c.*) was of opinion that *H. nicobarica* might perhaps be identical with *H. scripulum*; the figures of the two forms do not support this view.

571. *Helicina rogersi*, Bourne.

Aphanocoona rogersi, Bourne, P. Z. S. 1911, p. 801, pl. 42, fig. 65 (radula), figs. 66-68 (shell), fig. 69 (operculum).

Original description.—"Shell ohlately spheroidal, the surface

marked with closely set radial growth-lines; colour light orange-yellow marked with more or less distinct reddish-brown radial bands; spire of $4\frac{1}{2}$ whorls, increasing regularly and somewhat rapidly in size, the last whorl obtusely keeled, the keel produced into a prominent angular projection at the peristome. Aperture semi-lunar, very oblique, the outer margin thickened and expanded. Basal callus not very thick, hardly differing in colour from the rest of the shell, of rather small extent, its limits clearly defined above, as well as below. The whole shell deeper in proportion to its breadth than in *A. andamanica* and the spire more prominent.

"Operculum yellowish white in colour, the calcareous plate rather thin, the sigmoid curve pronounced, the upper angle produced.

"Radula with small diamond-shaped median tooth, the first admedian tooth more than twice as long as broad, the anterior edge incurved and bearing four denticulations, second and third admedian teeth each with four denticulations; the lateral teeth normal, the stalk rather long, the articular excavation deep, the aliform process bearing seven round denticulations." (*Bourne*.)

Hab. Andaman Is. (*Rogers*).

572. *Helicina scrupulum*, *Benson*.

Helicina scrupulum, Benson, A. M. N. H. ser 3, xii, 1863, p 425, Hanley & Theobald, Conch. Ind. 1875, pl. 133, figs. 8, 9; Theobald, Cat. Shells Brit. India, 1876, p 43, Nevill, Hand List, i, 1878, p 325

Original description — "H. testa parva, sublenticulari, crassiuscula, sublævigata, vix nitidula, minutissime oblique striatula, superne fusciscente, aufractu ultimo albido-cornea, supra peripheriam fascis 2 rufescentibus inferiore latiore ornata, spira depresso-conoidea, apice obtuso, sutura lineari, anfractibus $4\frac{1}{2}$, superioribus vix convexiusculis, ultimo obtuse angulato, apertura obliqua, subtriangulari-lunata; peristomate expanso, reflexiusculo, marginibus callo magno incrassato subcirculari retrorsum expanso polito junctis. Operculo tenui, albido.

"Diam 5, alt. 3 mill" (*Benson*)

Hab. Andaman Is: Mt Harriet, Andaman Is (*Nevill*), Nicobars? (*Stoliczka*).

APPENDIX.

The following figures, taken from specimens in the British Museum, were omitted in the text:—

Fig 41 — *Cyathopoma filoonotum* (p 135).

Fig 42.—*Rhaphaulus blanfordi* (p. 164).

The next two species have not hitherto been figured. Their types, now in the Senckenberg Museum in Frankfurt a/M., are represented on the two plates accompanying this volume, reproduced from photographs kindly furnished by Dr F. Haas, who has charge of the Mollusca in that institution.

Leptopomoides valvatus (p 21), Pl. I.

Alycæus subhumilis (p. 271), Pl. II.

DOUBTFUL AND SPURIOUS RECORDS.

Cyclostoma filosum, Sowerby, in Zoology, Capt. Beechey's Voyage in H M S 'Blossom,' 1839, p. 146, pl. 38, fig. 31; id., Thes Conch. 1, 1843, p 96, pl. 23, fig. 14.

Stated to have been brought from India, but not found since.

Cyclostoma (*Cyclostomus*?) *gradatum*, Pfeiffer, Proc. Zool. Soc. 1854, p. 303; id, Mon Pneum. Suppl. 1, 1858, p. 115; Suppl. 2, 1865, p. 126; Suppl. 3, 1878, p 173.

In his latest reference Pfeiffer reduces this to a synonym of *Bithyma marginata*.

Cyclostoma planorbulum, Sowerby, Thes. Conch. i, 1843, p. 110, pl. 25, figs. 83-86.

Originally recorded from Bengal, but reduced to a synonym of *Cyclotus variegatus*, Swains., a Philippine species, by Kobelt & Mollendorff, Nachr. Deuts. Malak. Ges. xxix, 1897, p. 117; id. Cat. Pneum. 1899, p. 30.

Cyclostoma punctatum, Grateloup, Act. Soc. Linn. Bordeaux, xi, 1841, p. 410, pl. 3, fig. 10; Pfeiffer, Conch.-Cab., Cyclostomaceen, 1847, p. 40, pl. 5, figs. 12, 13; id., Mon. Pneum. 1852, p. 67; Kobelt, Das Tierreich, Lief. 16, 1902, p. 142.

Recorded from Ceylon by Grateloup. China was indicated as its habitat by Pfeiffer on the authority of Sowerby. Kobelt gives Hong Kong.

Cyclostoma tricarinata, Lamarck, Hist. Nat. Anim. s. vert. vi, 2, 1822, p. 144; Sowerby, Thes. Conch. i, 1843, p. 120, pl. 26, fig. 122 (*tricarinatum*); Pfeiffer, Conch.-Cab., Cyclostomaceen, 1847, p. 25, pl. 3, fig. 8 (not pl. 4, figs. 16, 17), id., Mon. Pneum. 1852, p. 198, Suppl. 2, 1865, p. 125; Nevill, Hand List, i, 1878, p. 305.

Sowerby gave India as habitat, but Pfeiffer in 1865 (*l.c.*) indicated Madagascar.

Cyclostoma undulatum, Sowerby, Thes. Conch. i, 1843, p. 99, pl. 23, figs. 29, 30; Pfeiffer, Conch.-Cab., Cyclostomaceen, 1848, p. 97, pl. 12, figs. 24-26; id., Mon. Pneum. 1852, p. 223; Morelet, Ser. Conch. 1860, p. 100.

Originally recorded from Bengal by Sowerby. Pfeiffer in 1852 (*l.c.*) gave Mauritius as the habitat on the authority of Petit and Benson.

Pterocyclus biwhatus, Mousson, Land- u. Süssw. Moll. Java, 1849, p. 49, pl. 20, fig. 9; Pfeiffer, Zeit. Malak. viii, 1851, p. 137; Theobald, Cat. Shells Brit. India, 1876, p. 38; Nevill, Hand List, i, 1878, p. 263.

Originally recorded from Java. Pfeiffer indicated Burma as its habitat, but Borneo, given by Nevill and Theobald, is more likely to be correct.

The following are *nomina nuda*.—

Leptopoma alticolum, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 5.

Leptopoma radiceolum, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 6; Theobald, Cat. Shells Brit. India, 1876, p. 37.

Leptopoma satiferum, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 5; Theobald, Cat. Shells Brit. India, 1876, p. 37.

Cyclophorus kandyanus, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 6; Theobald, Cat. Shells Brit. India, 1876, p. 36.

Cyclophorus moerchianus (Roepstorf MS.), Godwin-Austen, Proc Zool Soc 1895, p 452.

Cyclophorus recognatus, H. Nevill, Enum Helic. Pneum. Ceylon, 1871, p. 4.

Micraulax asper, Theobald, Cat. Shells Brit. India, 1876, Addenda, p 11.

Cyathopoma alticolum, H. Nevill, Enum Helic Pneum. Ceylon, 1871, p 6, Theobald, Cat. Shells Brit. India, 1876, p. 38.

Cyathopoma (Jerdonia) bicarinatum (Bedd.), G Nevill, Hand List, 1, 1878, p. 259

Cyathopoma kunniense (W. Blanf.), Theobald, Cat. Shells Brit India, 1876, p. 38.

Pterocyclus zebrius, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 6, Theobald, Cat Shells Brit. India, 1876, p. 38.

Mychopoma lauta (Bedd.), Theobald, Cat. Shells Brit. India, 1876, p. 39.

Cataulus leucostoma (Fow.), H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p 5; Theobald, Cat. Shells Brit. India, 1876, p 41.

Alycaeus jawarensis (Godwin-Austen), Theobald, Cat Shells Brit. India, 1876, p. 39.

Alycaeus scepticus (Blanford), Theobald, J. A. S. B. xxxii, 1863, p. 377; Blanford, op cit. xxxiv, 1865, p. 101 (*A. Ingrami*, var.).

Nucida chrysalsidea, H. Nevill, Enum Helic. Pneum. Ceylon, 1871, p. 6, Theobald, Cat. Shells Brit. India, 1876, p. 42.

Nucida uncarinata, H. Nevill, Enum. Helic. Pneum. Ceylon, 1871, p. 6; Theobald, Cat Shells Brit. India, 1876, p. 43

Diplommatina glaber (W. Blanf.), Theobald, Cat. Shells Brit. India, 1876, p. 42.

Diplommatina politus (W. Blanf.), Theobald, Cat. Shells Brit. India, 1876, p. 42.

Helena crocea (Bens.), Theobald, Cat. Shells Brit. India, 1876, p. 43; G. Nevill, Hand List, 1, 1878, p. 324.

CORRIGENDA.

On p. 49 : *Cyclophorus menkeanus*, delete reference Reeve, Conch. Icon.

On p. 63 *Cyclophorus indicus*, under *Cyclostoma indicum*, delete reference Sowerby, Thes Conch

On p. 261. lines 32 and 33. for *nongtunensis* read *nongtungensis*.

On p. 301, line 30. for *acutulus* read *acutula*

After line 29 add Subgenus DIPLOMMATINA, s. s.

2703
K7

1944

ALPHABETICAL INDEX.

trochlea (Cyclophorus), 152
trochlea (Cyclostoma), 152
trochlea (Jerdona), 146
trochlea (Mychopoma), 152
trochleum (Cyathopoma), 152
trochordes (Cyclophorus), 93
Trochleptopoma, 2
trochela (Cyclophorus), 112
trochela (Pterocyclos), 111
Truncatella, 360
Truncatellina, 360
tryblum (Cyclophorus), 68
tryblum, var. *conica* (Cyclophorus), 68
tumida (Diplommatina), 337
tumida, var. (Diplommatina), 312
tumida, var. *abdit* (Diplommatina), 337
tumida, var. *lansenensis* (Diplommatina), 338
turbinatum (Cyathopoma), 152
turbo (Cyclophorus), 91
turbo (Cyclostoma), 91
turbo (Trochus), 91
Tylotoechus, 193
umbonalis (Alycaeus), 235
undulatum (Cyclostoma), 372
ungulata (Diplommatina), 338
unicarinata (Nucula), 373
uniarenata (Diplommatina), 348
urceolus (Alycaeus), 201
urceolus (Dioryx), 201
urnula (Alycaeus), 201
urnula (Dioryx), 201
urnula, var. *anghamiensis* (Dioryx), 202
urnula, var. *dadaensis* (Dioryx), 203
urnula, var. *globosa* (Dioryx), 202
urnula, var. *pisum* (Dioryx), 203
uvanense (Cyathopoma), 153
valvatus (Leptopomoides), 21, 371
varius (Alycaeus), 204
varius (Dioryx), 204
venustula (Diplommatina), 339
vesca (Cyclophorus), 13
vesca (Japonia), 13
vesica (Alycaeus), 220
vestitus (Alycaeus), 220
vestitus, var. *akyabensis* (Alycaeus), 221
vitreum (Cyathopoma), 143
volvulus (Turbo), 71
vulcani (Alycaeus), 221
warnefordiana (Japonia), 13
warnefordianus (Lagocheilus), 13
warnefordianum (Lagocheilus), 13
woodianus, var. *charpentieri* (Cyclophorus), 58
woodthorpei (Alycaeus), 275
wulferstorffiana (Japonia), 14
wulferstorffianum (Lagocheilus), 14
wulferstorffianus (Cyclophorus), 14
wynaadense (Cyathopoma), 144
yamneyensis (Alycaeus), 222
yamneyensis (Rhapaulus), 168
zebrinum (Cyclostoma), 86
zebrinus (Cyclophorus), 86
zebrinus, var. *ambigua* (Cyclophorus), 87
zebrinus, var. *aureolabris* (Cyclophorus), 53, 88
zebrinus, var. *chrysolabris* (Cyclophorus), 88
zebrinus (Pterocyclos), 373
zelebori (Helicina), 365
zelebori, var. *amphibola* (Helicina), 366
zelebori (Pachystoma), 365
zelebori (Sulfurina), 365
